Variations Among Cancer Registries in Accessing Patients for a Drug Safety Surveillance Study

Kirk D Midkiff, David Harris, Alicia Gilsenan, Ginger Powell
RTI Health Solutions, Research Triangle Park, NC, United States

OBJECTIVE
To describe the various types of patient access pathways by each participating cancer registry and describe the impact the pathways have on the success of study interview completion rates.

METHODS
Descriptive

RESULTS

CONCLUSIONS
- There is a time at which the interview rate will increase or decrease, depending on the time between the date of diagnosis and the interview.
- The interview rate is affected by various factors, including the registry, the time between the date of diagnosis and the interview, and the interview method.
