

The North American Association of Central Cancer Registries

2018-2019 Cancer Registry & Surveillance Webinar Series Course Description

Collecting Cancer Data: Lung

10/04/18

This 3-hour class will present the following information for lung: anatomical information needed to abstract and code the cases; how to determine the number of primary tumors; how to code topography and histology; how to code the stage data items; and the treatments and how to code them.

Collecting Cancer Data: Pharynx

11/1/18

This 3-hour class will present the following information for pharynx: anatomical information needed to abstract and code the cases; how to determine the number of primary tumors; how to code topography and histology; how to code the stage data items; and the treatments and how to code them.

Collecting Cancer Data: Breast

12/6/18

This 3-hour class will present the following information for breast: anatomical information needed to abstract and code the cases; how to determine the number of primary tumors; how to code topography and histology; how to code the stage data items; and the treatments and how to code them.

Collecting Cancer Data: Testis

1/10/19

This 3-hour class will present the following information for testis: anatomical information needed to abstract and code the cases; how to determine the number of primary tumors; how to code topography and histology; how to code the stage data items; and the treatments and how to code them.

Collecting Cancer Data: Colon

2/7/19

This 3-hour class will present the following information for colon: anatomical information needed to abstract and code the cases; how to determine the number of primary tumors; how to code topography and histology; how to code the stage data items; and the treatments and how to code them.

Abstracting and Coding Boot Camp: Cancer Case Scenarios

3/7/19

This 3-hour class will present case scenarios on multiple sites and histologies. We will abstract and code each scenario; determine the number of primary tumors; code cancer identification, stage of disease, and treatment data items.

Collecting Cancer Data: Hematopoietic and Lymphoid Neoplasms

4/4/19

This 3-hour class will present the following information for hematopoietic and lymphoid neoplasms: anatomical information needed to abstract and code the cases; how to determine the number of primary tumors; how to code topography and histology; how to code the stage data items; and the treatments and how to code them.

Collecting Cancer Data: Neuroendocrine Tumors

5/2/19

This 3-hour class will present the following information for neuroendocrine tumors: anatomical information needed to abstract and code the cases; how to determine the number of primary tumors; how to code topography and histology; how to code the stage data items; and the treatments and how to code them.

Collecting Cancer Data: Ovary

6/6/19

This 3-hour class will present the following information for ovary: anatomical information needed to abstract and code the cases; how to determine the number of primary tumors; how to code topography and histology; how to code the stage data items; and the treatments and how to code them.

Hospital Cancer Registry Operations-Topic TBD

7/11/19

During this session we will have guest speakers who are experts in their field discuss topics relevant to day-to-day operations in a hospital registry. Potential topics include RQRS, CQI (continuous quality improvement), etc. Final topics will be announced soon!

Solid Tumor Rules

8/1/19

In order to get consistent cancer data it is critical that registrars are applying the solid tumor rules uniformly. During this webinar we will review most current Solid Tumor rules. We will work through a variety of difficult and commonly misunderstood scenarios.

Coding Pitfalls

9/5/19

This 3-hour class will address coding dilemmas identified through quality control of registry data and present solutions with rationale for determining the number of primary tumors using the MP/H rules; assigning ICD-O-3 topography and histology codes using the ICD-O-3 Manual and Solid Tumor Rules; completing the stage of disease data items using AJCC Cancer Staging Manual, 8th Edition and Summary Stage 2018; and completing treatment data items as required by all standard setters.

The following subscription packages are available:

Webinars	Cost
12 Webinars	\$1,440 USD (Best Value... \$120 Per 3 hour Session!)
9 Webinars	\$1,215 USD
6 Webinars	\$900 USD
Single Webinar	\$185
1 remote staff member	\$100
3 remote staff members	\$200
5 remote staff members	\$300
