examination, then RX Summ--Surg Prim does not indicate that a specimen was sent to
pathology.

Please note that there is another edit, "CS SSF 1, Surg,  DX/Stg,
Skin/Scrotum/Merkel(CS)", that is exactly the same as this edit EXCEPT that it does
also checks the field RX Summ--DX/Stg Proc. It should be used by registries that
collect both RX Summ--Surg prim Site and RX Summ--DX/Stg Proc.

If CS schema is Skin, Scrotum, MerkelCellPenis, MerkelCellScrotum, MerkelCellSkin,
or MerkelCellVulva :
 - If CS Site-Specific Factor 1 = 998 (No histologic examination), then RX Summ--
Surg Prim Site must not be 20-89.

This edit is skipped if any of the following conditions is true:
1. CS Site-Specific Factor 1 is blank or 988
2. RX Summ--Surg Prim Site is blank
3. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline)
4. CS schema is invalid

This edit first determines the CS schema by doing a function call to the CS Dynamic
Link Library (dll).  The function call passes Primary Site, Histologic Type ICD-O-
3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS
schema name is returned.

## *Description*

```
This edit verifies that for cases using the Breast schema, SSF 10 (HER2: FISH Lab
Value) and SSF 11 (HER2: FISH Test Interpretation) are coded consistently. For
example, if one specifies "test not done", the other must also specify "test not
done".

If CS schema is Breast:
1. If CS Site-Specific Factor10 = 998 (test not done), then CS Site-Specific
Factor11 must = 998 (test not done).

2. If CS Site-Specific Factor11 = 998, then CS Site-Specific Factor10 must = 998.

3. If CS Site-Specific Factor10 is 991 (ratio of less than 1.00), then CS Site-
Specific Factor11 must not = 010 (positive/elevated; amplified).

4. If CS Site-Specific Factor11 = 010, then CS Site-Specific Factor10 must not =
991.

5. If CS Site-Specific Factor10 is greater than 500 and less than 981, then CS
Site-Specific Factor11 must not = 020 (negative/normal; within normal limits; not
amplified).

6. If CS Site-Specific Factor11 = 020, then CS Site-Specific Factor10 must be less
than or = 500 or = 991 or 997.

This edit is skipped if any of the following conditions is true:
1. CS Site-Specific Factor10 is blank or 988
2. CS Site-Specific Factor11 is blank or 988
3. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline)

## *Description*

This edit verifies that for cases coded using the Skin schema, CS Site-Specific Factor 11 (Perineural Invasion), RX Summ--Surg Prim Site, and RX Summ--DX/Stg Proc are coded consistently.

Please note that there is another edit, "CS SSF 11, Surg, Skin Schema (CS)", that is exactly the same as this edit EXCEPT that it does not include the field RX Summ--DX/Stg Proc. It should be used by registries that do not collect RX Summ--DX/Stg Proc.

This edit is skipped if any of the following conditions is true:
1. CS Site-Specific Factor 11 is blank or = 988
2. RX Summ--Surg prim Site is blank
3. RX Summ--DX/Stg Proc is blank
4. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline)
5. CS schema is invalid

This edit first determines the CS schema by doing a function call to the CS Dynamic Link Library (dll). The function call passes Primary Site, Histologic Type ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS schema name is returned.

If CS schema is Skin:
- If CS Site-Specific Factor11 = 998 (no histologic examination of primary site), then RX Summ--Surg Prim Site must be less than 20 and RX Summ--DX/Stg Proc must not = 02, 05, 06.

## *Description*

Purpose: This edit verifies that, for cases coded using the Prostate Schema, CS Site-Specific Factor12 (number of cores positive) and CS Site-Specific Factor13 (number of cores examined) are coded consistently.

If CS schema is Prostate:

1. If CS Site Specific Factor13 (number of cores examined) = 001-101, then CS Site Specific Factor12 (number of cores positive) must = 991 (biopsy cores positive, number unknown) or be less than or equal to CS Site Specific Factor13 or equal to 999.

2. If CS Site Specific Factor13 = 991 (biopsy cores examined, number unknown), then CS Site Specific Factor12 must = 000-101, 991 or 999.

3. If CS Site Specific Factor13 = 998 (no needle core biopsy performed), then CS Site Specific Factor12 must = 998 (no needle core biopsy performed).

4. If CS Site Specific Factor12 = 998, then CS Site Specific Factor13 must = 998.

This edit is skipped if any of the following conditions is true:

This edit verifies that for cases using the Breast schema, SSF 14 (HER2: Result of
Other or Unknown Test) is coded to 998 (test not done) when no surgery or
diagnostic procedure is performed yielding a pathologic specimen for testing.

If CS schema is Breast:
1. If RX Summ--Surg Prim Site  = 00 and RX Summ--DX/Stg Proc = 00 and RX Summ--
Scope Reg LN Sur = 0 and RX Summ--Surg Oth Reg/Dis = 0, then CS Site-Specific
Factor14 must = 998.

This edit is skipped if any of the following conditions is true:
1. CS Site-Specific Factor14 is blank or 988
2. RX Summ--Surg Prim Site is blank
3. RX Summ--DX/Stg Proc is blank
4. RX Summ--Scope Reg LN Sur is blank
5. RX Summ--Surg Oth Reg/Dis is blank
6. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline)
7. CS schema is invalid

This edit first determines the correct CS schema by doing a function call to the CS
Dynamic Link Library (dll).  The function call passes Primary Site, Histologic Type
ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS
schema name is returned.

New edit - added to NAACCR v12.1 metafile.

In the SEER*Edits software, the title of this edit is: IF322

Modifications:

NAACCR v12.1B
1. Updated to skip if CS SSF 17 is 988.
2. Updated to also allow codes indicating "in-transit metastasis without regional lymph node involvement", "stated as N2 [NOS] with no other information on regional lymph nodes", and "unknown", when checking CS Lymph Nodes for "no lymph nodes involved".
That is, for CS SSF 17 of 000:
 If schema is MerkelCellPenis, CS Lymph Nodes must = 000, 420, or 999.
 If schema is MerkelCellScrotum, CS Lymph Nodes must = 000, 400, or 999.
 If schema is MerkelCellVulva, CS Lymph Nodes must = 000, 520, or 999.
 If schema is MerkelCellSkin, CS Lymph Nodes must = 000, 400, 480, or 999.
3. Deleted logic that requires CS SSF 17 to be 988 or 999 if CS lymph Nodes is 999.

NAACCR v12.2C

**CS SSF 18, MerkelCell Schemas (CS)**

- Sequence of edit logic changed in condition #3 and additional codes added when checking CS SSF 17 for codes indicating nodes not assessed pathologically: instead of checking if CS SSF 17 = 030, 060, 090, then Scope of Reg LN Surg must = 0, the edit now checks if Scope of Regional LN Surg = 0, then CS SSF 17 must = 000, 020, 030, 050, 060, 080, 090, 999.

NAACCR v13

If RX Summ--Scope Reg LN Sur = 0, then CS Site-Specific Factor17 must = 000, 020, 030, 050, 060, 080, 090, or 999.

NAACCR v14

This edit verifies that for cases coded using the MerkelCellPenis,
MerkelCellScrotum, MerkelCellSkin, and MerkelCellVulva schemas, CS Site-Specific
Factor 18 [Isolated Tumor Cells (ITCs) in Regional Lymph Node(s)],  RX Summ--Scope
Reg LN Sur, and CS Lymph Nodes are coded consistently.

This edit is skipped if any of the following conditions is true:
1. CS Site-Specific Factor 18 is blank or 988
2. CS Lymph Nodes is blank
3. RX Summ--Scope Reg LN Sur is blank
4. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline)
5. CS schema is invalid

This edit first determines the CS schema by doing a function call to the CS Dynamic
Link Library (dll).  The function call passes Primary Site, Histologic Type ICD-O-
3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS
schema name is returned.

If CS schema is MerkelCellPenis, MerkelCellScrotum, MerkelCellSkin, or
MerkelCellVulva:

1.  If CS Tumor Size/Ext Eval not = 2 or 8 (codes indicating autopsy):
      If RX Summ--Scope Reg LN Sur = 0 (none), then CS Site-Specific Factor18
      must = 000 (nodes not examined pathologically) or 999 (unknown).

2.  If CS Site-Specific Factor18 = 000 or 010 (nodes negative on routine exam and
IHC or unknown if IHC)
then
   A.  Regional Nodes Positive must = 00 (all nodes examined negative) or 98 (no
nodes examined).

   B.  If CS schema is MerkelCellPenis:
         CS Lymph Nodes must be one of the following:
           000 (no regional lymph node involvement)
           420 (in-transit metastasis WITHOUT regional lymph node involvement)
           999 (unknown)

       If CS schema is MerkelCellScrotum:
         CS Lymph Nodes must be one of the following:
           000 (no regional lymph node involvement)
           400 (in-transit metastasis WITHOUT regional lymph node involvement)
           999 (unknown)

       If CS schema is MerkelCellVulva:
         CS Lymph Nodes must be one of the following:
```

**CS SSF 2, Dx Conf, KidneyRenalPelvis (CS)**

```
            000 (no regional lymph node involvement)
            520 (in-transit metastasis WITHOUT regional lymph node involvement)
            999 (unknown)

       If CS schema is MerkelCellSkin:
         CS Lymph Nodes must be one of the following:
           000 (no regional lymph node involvement)
           400 (in-transit metastasis WITHOUT regional lymph node involvement)
           480 (stated as N2 [NOS] with no other information on regional lymph
nodes
           999 (unknown)

3.  If CS Site-Specific Factor18 = 020, 090, 100, 200, or 300, indicating positive
nodes including ITC, then CS Lymph Nodes must not = 000 (no regional lymph node
involvement) or 999 (unknown).
```

## *Administrative Notes*

New edit - added to NAACCR v12.1 metafile.

In the SEER*Edits software, the title of this edit is: IF323

Modifications:

NAACCR v12.1B
1. Updated to skip if CS SSF 18 is 988.
2. Updated to also allow codes indicating "in-transit metastasis without regional lymph node involvement", "stated as N2 [NOS] with no other information on regional lymph nodes", and "unknown", when checking CS Lymph Nodes for "no regional lymph node involvement".
That is, for CS SSF 18 of 000 or 010:
 If schema is MerkelCellPenis, CS Lymph Nodes must = 000, 420, or 999.
 If schema is MerkelCellScrotum, CS Lymph Nodes must = 000, 400, or 999.
 If schema is MerkelCellVulva, CS Lymph Nodes must = 000, 520, or 999.
 If schema is MerkelCellSkin, CS Lymph Nodes must = 000, 400, 480, or 999.
3. Added logic to check that Reg Nodes Pos = 00 or 98 if CS Lymph Nodes is 000 or 010.
4. Deleted logic that requires CS SSF 18 to be 988.

NAACCR v13
- If CS Tumor Size/Ext Eval = 2 or 8 (codes indicating autopsy), the following logic is skipped:
If RX Summ--Scope Reg LN Sur = 0, then CS Site-Specific Factor18 must = 000 or 999.

Modifications:

NAACCR v14
- Function call to the CS Dynamic Link Library updated to call "CStage0205.dll" instead of "CStage.dll"
- Default error message added

extensive involvement.

## *Description*

Purpose: This edit verifies that, for cases coded using the Prostate Schema, if a prostatectomy is not performed or unknown if performed (CS Site-Specific Factor 3 coded 960, 970, or 980), the middle digit of CS Site Specific Factor 4 (involvement of prostatic apex at prostatectomy) must be coded 5, indicating unknown apex involvement at prostatectomy.

This edit is skipped if any of the following conditions is true:
1. CS Site-Specific Factor 3 is blank
2. CS Site-Specific Factor 4 is blank
3. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline)
4. CS Version Input Original is less than 010200 (version 01.02).
5. Date of Diagnosis is blank
5. Year of diagnosis is 2010 or later and CS Site-Specific Factor 4 is blank or 988
6. CS schema is invalid

This edit first determines the CS schema by doing a function call to the CS Dynamic Link Library (dll). The function call passes Primary Site, Histologic Type ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS schema name is returned.

If CS schema is Prostate:

If CS Site-Specific Factor 3 = 960 (unknown if prostatectomy done), 970 (no prostatectomy done within first course of treatment), 980 (prostatectomy performed, but not considered first course of treatment), then the second digit of CS Site-Specific Factor 4 must = 5 (prostatectomy apex involvement: unknown).

## *Description*

This edit verifies that for cases coded using the CS Prostate schema, if CS Tumor Size/Ext Eval indicates prostatectomy done, CS Site-Specific Factor 3 must not indicate prostatectomy not done. Likewise, if CS Tumor Size/Ext Eval indicates no prostatectomy done, then CS Site-Specific Factor 3 must not indicate prostatectomy done.

This edit is skipped if any of the following conditions is true:
1. CS Site-Specific Factor 3 is empty
2. CS Tumor Size/Ext Eval is empty
3. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline)
4. CS Schema is invalid
5. Date of Diagnosis is blank or invalid

This edit first determines the CS schema by doing a function call to the CS Dynamic Link Library (dll). The function call passes Primary Site, Histologic Type ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS schema name is returned.

If CS schema is Prostate:

1. If CS Tumor Size/Ext Eval = 4, 5, or 6 (codes indicating prostatectomy performed), then CS Site-Specific Factor 3 must not = 960, 970, 980, or 985 (codes indicating prostatectomy not done or unknown).

2. If CS Extension = 950 or 999
   Then
   If CS Site-Specific Factor 3 = 000-750, then CS Tumor Size Ext/Eval must not = 0, 1, 2, 5, 9.

3. If year of Diagnosis is 2010 or later OR CS Version Input Original is greater than 020000
   Then
   If CS Extension = 200-240 (clinically apparent only)
   Then
   A. If CS Site-Specific Factor 3 = 960 (unknown if prostatectomy done)
      Then
      CS Tumor Size Ext/Eval must = 0 (based on clinical information only) or 9 (unknown if prostatectomy done).
   B. If CS Site-Specific Factor 3 = 970 or 980 (codes indicating no prostatectomy)
      Then
      CS Tumor Size Ext/Eval must = 0

4. If Tumor Size/Ext Eval = 3 (no prostatectomy done, but evidence derived from autopsy) or 8 (evidence derived from autopsy only), then CS Site-Specific Factor 3 must not = 960, 970, 980, or 990. Tnese codes are not appropriate for cases coded using autopsy information.

5. If CS Tumor Size/Ext Eval = 3 , then CS Site-specific Factor 3 must not = 950.

**CS SSF 3, TS/Ext Eval, Prostate Schema (CS)**

```
6. If CS Tumor Size Ext/Eval = 6 (prostatectomy performed AFTER neoadjuvant therapy

- Logic pertaining to CS Extension 200-240 was modified so that it applies only if year of Diagnosis is 2010 or later OR CS Version Input Original is greater than 020000.
- Added:
8. If CS Site-Specific Factor 3 = 200-750, then CS Tumor Size Ext/Eval must not = 0, 1 or 9

## *Description*

```
Purpose: This edit verifies that, for cases coded using the CS Testis schema, if
there is no radical orchiectomy coded in the surgery field, CS Site-Specific Factor
4 must also show no radical orchiectomy done, and vice versa.

This edit is skipped if any of the following conditions is true:
1. Case is is a death certificate only (Type of Reporting Source = 7)
2. CS Site-Specific Factor 4 is blank
3. RX Summ--Surg Prim Site is blank
4. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline)
5. CS schema is invalid
```

**CS SSF 4, RX Summ--Surg, Testis Schema (CS)**

This edit first determines the CS schema by doing a function call to the CS Dynamic Link Library (dll). The function call passes Primary Site, Histologic Type ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS schema name is returned.

For cases coded using the Testis schema:

If RX Summ--Surg Prim Site = 80 (orchiectomy, NOS), 90 (Surgery, NOS),or 99 (unknown if surgery performed),
then CS Site-Specific Factor 4 must = 000 (radical orchiectomy not performed) or 999 (unknown if radical orchiectomy performed).

Otherwise if there was no radical orchiectomy (RX Summ--Surg Prim Site not = 40), then CS Site-Specific Factor 4 must = 000.

If CS Site-Specific Factor 4 = 000, then RX Summ--Surg Prim Site must not = 40.

This edit is skipped if any of the following conditions is true:

**CS SSF 6, Breast Schema (CS)**

```
1. CS Site-Specific Factor 6 is empty or = 988 (not applicable: information not
collected for this case)
2. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline)
3. CS schema is invalid

This edit first determines the correct CS schema by doing a function call to the CS
Dynamic Link Library (dll).  The function call passes Primary Site, Histologic Type
ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS
schema name is returned.

If CS schema is Breast
    If Behavior Code ICD-O-3 = 2 (in situ), then CS Site-Specific
    Factor 6 (size of tumor-invasive component) must = 010 (entire
    tumor reported as in situ (no invasive component reported))
    or 987 (unknown if invasive and in situ components
    present, unknown if tumor size represents mixed tumor or a "pure" tumor.
    Clinical tumor size coded.)

      If CS Site-Specific Factor 6 = 010 and Histologic Type ICD-O-3 is not = 8543
(Paget disease of breast) cases, then Behavior Code ICD-O-3 must = 2.

## *Description*

The purpose of this edit is to verify that, for cases coded using the Breast Schema, that Site-Specific Factor 6 and CS Tumor Size are coded consistently.

This edit is skipped if any of the following conditions is true:
1. CS Site-Specific Factor 6 is empty or = 988 (not applicable: information not collected for this case)

2. CS Tumor Size is empty
3. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline)
4. CS schema is invalid

This edit first determines the correct CS schema by doing a function call to the CS Dynamic Link Library (dll). The function call passes Primary Site, Histologic Type ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS schema name is returned.

For cases coded using the Breast schema:

1. If CS Site-Specific Factor 6 = 020, 030, 040, or 050, indicating size of invasive or entire component coded in CS Tumor Size, the CS Tumor Size must not = 999 (unknown; size not stated).

2. If CS Site-Specific Factor 6 = 060 [Invasive and in situ components present, unknown size of tumor (CS Tumor Size coded 999)], then CS Tumor Size must = 999 (unknown).

## *Administrative Notes*

New edit - added to NAACCR v12.1A metafile.

In the SEER*Edits software, the title of this edit is: IF379

Modifications:

NAACCR v12.2C
- Sequence of edit logic changed in condition #2: instead of checking if CS SSF 9 = 998, then Scope of Reg LN Surg must = 0, the edit now checks (in #4) if Scope of Regional LN Surg = 0, then CS SSF 9 must = 998 or 999.

NAACCR v13
- Corrected edit logic so that the following statement would execute correctly: "If RX Summ--Scope Reg LN Sur = 0 (none), then CS Site-Specific Factor 9 must = 998 or 999". The logic mistakenly checked for RX Summ--Scope Reg LN Sur code "00" instead of "0".
- Also added code to skip the above logic if CS Tumor Size/Ext Eval is 2, 8 or 9 (codes indicating autopsy or unknown if surgery).

NAACCR v14
- Function call to the CS Dynamic Link Library updated to call "CStage0205.dll" instead of "CStage.dll"
- Edit updated for CS v02.05: if CS Version Input Original is 020500 or higher and RX Summ--Scope Reg LN Sur = 1 (biopsy or aspiration of regional lymph nodes), then CS SSF 9 must = 998 or 999.

NAACCR v14A
- Edit updated: 00 was added to the list of codes allowed for Regional Nodes Positive when CS Site-Specific Factor 9 = 998.

**CS SSF 9, SSF 10, Prostate Schema (CS)**

NAACCR v16
- Removed condition that looked at CS TS/Ext Eval from this edit and created a seperate edit Titled CS SSF 9, Surgery, HeadNeck Schemas.

## *Description*

Purpose: This edit verifies that, for cases coded using the Prostate Schema, CS Site Specific Factor 9 (Gleason's Primary Pattern and Secondary Pattern Values on Prostatectomy/Autopsy) and CS Site-Specific Factor 10 (Gleason's Score on Prostatectomy/Autopsy) are coded consistently.

If CS schema is Prostate:

If RX Summ--Surgery Prim Site = 30, 50, 70, 80 (codes indicating prostatectomy) OR Type of Reporting Source = 6 (autopsy only) OR CS Tumor Size/Ext Eval = 3 or 8 (codes indicating evidence derived from autopsy), then the recorded CS Site-Specific Factor 9 and 10 codes must correspond to each other as specified in the table below AND both CS Site-Specific Factor 9 and 10 codes must not = 998 (no prostatectomy/autopsy performed).

If RX Summ--Surgery Prim Site not = 30, 50, 70, 80, 99 AND [Type of Reporting Source not = 6 or blank] AND [CS Tumor Size/Ext Eval not = 3, 8, 9 or blank], then the recorded CS Site-Specific Factor 9 and 10 codes must both = 998 (no prostatectomy/autopsy performed).

## *Description*

The purpose of this edit is to verify that, for cases coded using the CS Bladder schema, the CS Tumor Size/Ext Eval code is correct for surgeries which do not meet the pathologic staging criteria. An exception is made for CS Extension codes mapping to the highest T category which may be pathologically evaluated (CS Tumor Size/Ext Eval code 3) without primary site resection.

This edit is skipped if any of the following conditions is true:
1. CS Tumor Size/Ext Eval is empty.
2. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline).

For cases coded using the Bladder:

If RX Summ--Surg Prim Site = 10-27:
1. If CS Extension = 700-805 (CS Extension codes mapping to the highest T category which may be pathologically evaluated), then CS Tumor Size/Ext Eval must not = 5, 6 or 8.
2. For all other CS Extension codes, CS Tumor Size/Ext Eval must not = 3, 5, 6 or 8.

## *Description*

```
For cases using the CS Prostate schema:
1. If RX Summ--Surg Prim Site = 22 (TURP, cancer is incidental finding during
surgery for benign disease), then the CS Tumor Size/Ext Eval should be coded as 1
(No prostatectomy done. Evaluation based on endoscopic examination, diagnostic
biopsy, including fine needle aspiration biopsy, or other invasive Techs including
surgical observation without biopsy) or 2 (No prostatectomy done, but positive
biopsy of extraprostatic tissue allows assignment to CS Extension Codes 410-700);
otherwise  if only a TURP is performed (RX Summ--Surg Prim Site = 19-26), then the
CS Tumor Size/Ext Eval should be coded as 0 [No prostatectomy done.  Evaluation
based on physical examination including  digital rectal examination (DRE), imaging
examination, or other non-invasive clinical evidence.  No autopsy evidence used], 1
or 2.

2. If CS Tumor Size/Ext Eval = 4 (prostatectomy performed WITHOUT pre-surgical
systemic treatment or radiation), 5 (prostatectomy performed AFTER neoadjuvant
```

**CS TS/Ext Eval, Surgery, Prostate Schema (CS)**

therapy and tumor size/extension based on clinical evidence), or 6 (prostatectomy performed AFTER neoadjuvant therapy and tumor size/extension based on pathologic evidence), then RX Summ--Summ--Surg Prim Site must = 30-80 (prostatectomy performed).

The logic is:

If schema is Prostate schema:

1. If RX Summ--Surg Prim Site = 22, then
   CS Tumor Size/Ext Eval must = 1 or 2.

   Otherwise:

   If RX Summ--Surg Prim Site = 19-26, then
   CS Tumor Size/Ext Eval must = 0, 1, or 2.

2. If Tumor Size/Ext Eval = 4, 5, or 6 (prostatectomy performed) then
   RX Summ--Surg Prim Site must = 30-80

This edit is skipped if any of the following conditions is true:
1. CS Tumor Size/Ext Eval is empty.
2. RX Summ--Surg Prim Site is empty
3. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline)
4. CS schema is invalid

This edit first determines the correct CS schema by doing a function call to the CS Dynamic Link Library (dll). The function call passes Primary Site, Histologic Type ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS schema name is returned.

## *Administrative Notes*

In the SEER*Edits software, the title of this edit is: IF196

Modifications:

NAACCR v11.1A
05/07
1. The RX Summ--Surg Prim Site range requiring CS Tumor Size/Ext Eval of 1 was changed from 19-26 to 19-30.
2. Additional code was added to require CS Tumor Size/Ext Eval of 0 or 1 for RX Summ--Surg Prim Site code of 18.

NAACCR v11.2
8/2007
This edit was modified so that it will be skipped if Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline).

11/2007
Description updated: lymphoma and hematopoietic histologies are now grouped together in the list of histologies for which this edit is skipped.

NAACCR v11.3

**CS TS/Ext Eval, Sys/Surg Seq, Prostate (CS)**

6/2008
- Updated Administrative Notes with the title of the corresponding edit in the SEER*Edits software.
- Changed the range of surgery codes for "only TURP is performed" from 19-30 to 19-26; code 30 is not included because it indicates "subtotal, segmental, or simple prostatectomy, which may leave all or part of the capsule intact", which can be pathologic under rare circumstances.
- Deleted logic that requires CS Tumor Size/Ext Eval of 0 or 1 (no surgical resection done) for surgery code of 18 (local tumor destruction or excision, NOS); this is because surgery code 18 could plausibly involve a simple prostatectomy.

NAACCR v11.3A
11/2008
- Added "2" to CS Tumor Size/Ext Eval codes allowed if RX Summ--Surg Prim Site = 19-26.

NAACCR v12.0:
- Edit modified to get schema name from function call to CS dll
- Modified edit to allow CS Tumor Size/Ext Eval of 1 and 2 for RX Summ--Surg Prim Site of 22; allow CS Tumor Size/Ext Eval of 0, 1, and 2 for RX Summ--Surg Prim Site of 19-21, 23-26

NAACCR v12.2:
- Added: If CS Tumor Size/Ext Eval = 4, 5, or 6, then RX Summ--Summ--Surg Prim Site must = 30-80

NAACCR v12.2C:
- Error message corrected

NAACCR v14
- Function call to the CS Dynamic Link Library updated to call "CStage0205.dll" instead of "CStage.dll"

This edit verifies that for cases coded using the CS Prostate schema, if CS Tumor

```
The purpose of this edit is to verify that the schema is a valid CS schema.

This edit must be included in the edit sets for each standard setter since most
other CS edits
will be skipped if the schema is invalid.

This edit is skipped if any of the following conditions is true:
1. Primary Site is empty.
2. Histologic Type ICD-O-3 is empty
3. Year of Date of Diagnosis is empty, invalid, less than 2004, or greater than
2017

This edit determines the CS schema by doing a function call to the CS Dynamic Link
Library (dll).
The function call passes Primary Site, Histologic Type ICD-O-3, and CS Site-
Specific Factor25
(schema discriminator) to the dll. An error is generated if the schema is not
found, or if CS
Site-Specific Factor 25 is blank or coded 988 when the schema discriminator (CS SSF
25) is
required to select the correct schema.

## *Default Error Message*

[3380] CS schema is invalid (NAACCR)

## *Additional Messages*

ERROR_TEXT(Invalid site or histology)
ERROR_TEXT(Schema discriminator missing or invalid)

## *Description*

```
The purpose of this edit is to verify that the schema is a valid CS schema.

This edit must be included in the edit sets for each standard setter since most
other CS edits
will be skipped if the schema is invalid.

This edit is skipped if any of the following conditions is true:
1. Primary Site is empty.
2. Histologic Type ICD-O-3 is empty
3. Year of Date of Diagnosis is empty, invalid, less than 2004, or greater than
2017
4. Over-ride CS 20 is '1' AND Type of Reporting Source = 3-7 AND CS Site-Specific
Factor25 is
blank

This edit determines the CS schema by doing a function call to the CS Dynamic Link
Library (dll).
The function call passes Primary Site, Histologic Type ICD-O-3, and CS Site-
Specific Factor25
(schema discriminator) to the dll. An error is generated if the schema is not
found, or if CS
Site-Specific Factor 25 is blank or coded 988 when the schema discriminator (CS SSF
25) is
required to select the correct schema.
```

**CS Verify CStage Version 0205xx (CS)**

## *Administrative Notes*

New edit - added to NAACCR v13A metafile.

This edit differs from the CS edit of the same name in that the edit is skipped if Over-ride CS 20 is '1' AND Type of Reporting Source =
3-7 AND CS Site-Specific Factor25 is blank. Over-ride CS 20 is set to '1' when directly coded summary stage (SEER Summary Stage
2000 [759]) is recorded in lieu of Derived SS2000 [3020].

Modifications:

NAACCR v14
- Function call to the CS Dynamic Link Library updated to call "CStage0205.dll" instead of "CStage.dll"

NAACCR v18
- Description, logic modified to skip if diagnosis year > 2017
- Failure on invalid date changed to skip

## *Description*

General information on the inter-field editing of date and date flag fields:

**Date 1st Crs RX COC, Date Flag (NPCR)**

The purpose of this inter-field edit is to verify that a date field and the corresponding date flag field are in agreement. A blank flag field indicates that the date was either filled in or intentionally not collected. Otherwise the date flag should include a 2-digit code indicating the reason the date field is blank.

This edit requires Date 1st Crs RX COC; that is, it must always be populated OR its corresponding flag must indicate the reason the field is blank.
1. If Date 1st Crs RX COC is populated, then Date 1st Crs RX COC Flag must be blank.
2. If Date 1st Crs RX COC is blank, then Date 1st Crs RX COC Flag must = 10 (unknown whether treatment was administered), 11 (autopsy only case), or 12 (treatment administered but date is unknown).

## *Administrative Notes*

New edit - added to NAACCR v12.0 metafile.

This edit differs from the NPCR edit of the same name in that it does not allow both the date and flag fields to be blank; that is, if the
date field is blank, the flag field must include a code indicating why the date is blank.

## *Description*

General information on the inter-field editing of date and date flag fields:
The purpose of this inter-field edit is to verify that a date field and the corresponding date flag field are in agreement. A blank flag field indicates that the date was either filled in or intentionally not collected. Otherwise the date flag should include a 2-digit code indicating the reason the date field is blank.

This edit does not require Date Conclusive DX because it was not required by the SEER for cases diagnosed prior to 2007; that is, Date Conclusive DX and its corresponding date flag, Date Conclusive DX Flag, may both be blank, indicating the date was intentionally not collected. However, if either field is populated, they must be in agreement.
1. If both fields are blank, the edit is skipped.
2. If Date Conclusive DX is populated,then Date Conclusive DX Flag must be blank.
3. If Date Conclusive DX is blank and Date Conclusive DX Flag is not blank, then Flag must = 10 (unknown if the diagnosis was initially based on ambiguous terminology), 11 (not applicable, initial diagnosis made by unambiguous terminology), 12 (initial ambiguous diagnosis was followed by a conclusive term, but the date of the conclusive term is unknown), or 15 (accessioned based on ambiguous terminology only).

This edit is skipped if one of the following is true:
   1.  Year of diagnosis is blank or invalid
   2.  Year of diagnosis is less than 2003
   3.  Year of diagnosis is greater than 2018.

If at least one treatment field specifies YES, then Date Initial RX SEER cannot indicate no
cancer-directed therapy performed (Date Initial RX SEER is blank with Date Initial RX SEER Flag
set to 11).

If Date Initial RX SEER is a known date (not blank), then ALL treatment fields cannot specify
NO.

Modifications:

NAACCR v11.3
6/2008
Updated Administrative Notes with the title of the corresponding edit in the SEER*Edits software.

NAACCR v12.0
- Modified to use the date format of CCYYMMDD and the new interoperability date functions and rules.

NAACCR v12.2C
- Modified so that definition of "performed" for RX Summ--Scope Reg LN Sur remains 1-7 for cases diagnosed 2003-2011, but is changed for cases diagnosed 2012 and later: 1, 3-7 for all cases, and 2 only if Regional Nodes Examined = 01-98. This is because code 2, as of 2012, can mean that a SLNBx was attempted but the patient failed to map and no nodes were removed.
- When determining whether surgery was "not performed", RX Summ--Scope Reg LN Sur code 2 (for cases diagnosed 2012 and later with Reg Nodes Examined = 00 or 99) added to conditions considered "no regional lymph node surgery".

**Date Initial RX SEER, Ca Dir RX 98-02 (SEER IF179)**

NAACCR v13
- Edit name changed from 'Date of Initial RX, Ca Dir RX 2003 (SEER IF180)' to 'Date Initial RX SEER, Ca Dir RX 2003 (SEER IF180)'.
- Data item names changed:
  from 'Date of Initial RX--SEER' to 'Date Initial RX SEER'
  from 'Date of Initial RX Flag' to 'Date Initial RX SEER Flag'

NAACCR v18
- Edit modified to skip if invalid diagnosis date rather than return error message.
- Edit modified to skip if diagnosis date >= 2018

NAACCR v18C
- Description, logic modified to skip if diagnosis date > 2018

This edit is skipped under the following conditions:
1.  If Registry ID is 0000001544 (New Jersey) or 00001541 (Greater California)
2.  If year of Date of Diagnosis is less than 1988 and Registry ID is
    0000001529 (SEER Alaska Native Tumor)
3.  If year of Date of Diagnosis is greater than 1997

The purpose of this edit is to insure that when any cancer-directed therapy is
reported as known, a known Date Initial RX SEER is also reported.  Similarly when
it is unknown if any cancer-directed therapy was performed, the Date Initial RX
SEER is unknown.

The following table specifies the values for each treatment field for known to have
not been performed (NO), for known to have been performed(YES), and unknown if
performed(UNK).
```

**Date Initial RX SEER, Ca Dir RX Pre-98 (SEER IF34)**

If all treatment fields specify NO, then Date Initial RX SEER must specify no therapy performed (Date Initial RX SEER is blank with Date Initial RX SEER set to 11).

If at least one treatment field specifies YES, then Date Initial RX SEER cannot indicate no cancer-directed therapy performed ((Date Initial RX SEER is blank with Date Initial RX SEER set to 11).

If no treatment field specifies YES and at least one treatment field specifies UNK, then Date Initial RX SEER must specify unknown or no cancer-directed therapy performed (blank).

1. All codes are assumed valid, i.e., previously checked. This edit checks to see if the codes fit into "none" or "unknown". If they don't, it checks the "yes" group. The edit does not verify that a particular code is valid.

2. Some registries use the code `7' (Patient or patient's guardian refused) for cases diagnosed before 1988. This edit does not verify that the `7' is not present before 1988. A separate interfield edit does this check on date.

Date Initial RX SEER and Date Initial RX SEER Flag conflict

## *Additional Messages*

[3264] Either date or corresponding date flag must be blank if other is present (NAACCR)
[3272] If Date Initial RX SEER is blank, corresponding Date Initial RX SEER Flag must = 10, 11, or 12 (NAACCR/COC)

## *Description*

General information on the inter-field editing of date and date flag fields:
The purpose of this inter-field edit is to verify that a date field and the corresponding date flag field are in agreement. A blank flag field indicates that the date was either filled in or intentionally not collected. Otherwise the date flag should include a 2-digit code indicating the reason the date field is blank.

This edit requires Date Initial RX SEER; that is, it must always be populated OR its corresponding flag must indicate the reason the field is blank.
1. If Date Initial RX SEER is populated, then Date Initial RX SEER Flag must be blank.
2. If Date Initial RX SEER is blank, then Date Initial RX SEER Flag must = 10 (unknown whether therapy was administered), 11 (therapy was not administered), or 12 (therapy administered but date is unknown).

## *Administrative Notes*

New edit - added to NAACCR v12.0 metafile.

In the SEER*Edits software, the title of this edit is: IF222

This edit differs from the NPCR edit of the same name in that it does not allow both the date and flag fields to be blank; that is, if the date field is blank, the flag field must include a code indicating why the date is blank.

## *Description*

General information on the inter-field editing of date and date flag fields:
The purpose of this inter-field edit is to verify that a date field and the corresponding date flag field are in agreement. A blank flag field indicates that the date was either filled in or intentionally not collected. Otherwise the date flag should include a 2-digit code indicating the reason the date field is blank.

This edit does not require Date Initial RX SEER; that is, Date Initial RX SEER and its corresponding date flag, Date Initial RX SEER Flag, may both be blank, indicating the date was intentionally not collected. However, if either field is populated, they must be in agreement.
1. If both fields are blank, the edit is skipped.
2. If Date Initial RX SEER is populated,then Date Initial RX SEER Flag must be blank.
3. If Date Initial RX SEER is blank and Date Initial RX SEER Flag is not blank, then Date Initial RX SEER Flag must = 10 (unknown whether treatment was administered), 11 (autopsy only case), or 12 (treatment administered but date is unknown).

**Date Initial RX SEER, Date Last Cont (NAACCR IF35)**

## *Administrative Notes*

New edit - added to NAACCR v12.0 metafile.

This edit differs from the NAACCR edit of the same name in that it does not require the date information, but if populated, the date and corresponding flag must be in agreement.

case was diagnosed in utero.

Otherwise, Birth Date must not be later than Date of Diagnosis.  If either
year is blank (unknown), the edit is skipped.  If either month is blank, then only

General information on the inter-field editing of date and date flag fields:
The purpose of this inter-field edit is to verify that a date field and the corresponding date flag field are in agreement. A blank flag field indicates that the date was either filled in or intentionally not collected. Otherwise the date flag should include a 2-digit code indicating the reason the date field is blank.

This edit requires Date of Diagnosis; that is, it must always be populated OR its corresponding flag must indicate the date is unknown.
1. If Date of Diagnosis is populated (not blank), then Date of Diagnosis Flag must be blank.

**Date of Diagnosis, EOD Coding Sys, EOD (SEER IF33)**

## *Description*

General information on the inter-field editing of date and date flag fields:
The purpose of this inter-field edit is to verify that a date field and the corresponding date flag field are in agreement. A blank flag field indicates that the date was either filled in or intentionally not collected. Otherwise the date flag should include a 2-digit code indicating the reason the date field is blank.

Date of Last Cancer (tumor) Status and its corresponding date flag, Date of Last Cancer (tumor) Status Flag, may both be blank, indicating the date was intentionally not collected. However, if either field is populated, they must be in agreement. Another edit checks that the item is recorded according to standard setter requirements by date and class of case.

1. If both fields are blank, the edit is skipped.
2. If Date of Last Cancer (tumor) Status Flag is populated,then Date of Last Cancer (tumor) Status must be blank.
3. If Date of Last Cancer (tumor) Status is blank and Date of Last Cancer (tumor) Status Flag is not blank, then Date of Last Cancer (tumor) Status Flag must = 12 (the Date of Last Cancer (tumor) Status is unknown).

## *Description*

General information on the inter-field editing of date and date flag fields:
The purpose of this inter-field edit is to verify that a date field and the corresponding date flag field are in agreement. A blank flag field indicates that the date was either filled in or intentionally not collected. Otherwise the date flag should include a 2-digit code indicating the reason the date field is blank.

This edit does not require Date of Mult Tumors because it was not required by the SEER for cases diagnosed prior to 2007; that is, Date of Mult Tumors and its corresponding date flag, Date of Mult Tumors Flag, may both be blank, indicating the date was intentionally not collected. However, if either field is populated, they must be in agreement.
1. If both fields are blank, the edit is skipped.
2. If Date of Mult Tumors is populated,then Date of Mult Tumors Flag must be blank.
3. If Date of Mult Tumors is blank and Date of Mult Tumors Flag is not blank, then Flag must = 11 (information on multiple tumors not collected/not applicable for this site), 12 (patient was diagnosed with multiple tumors and the date is unknown), or 15 (single tumor).

## *Description*

This data item records the date non-sentinel regional node dissection was
performed. This data item is collected for all cases.

This edit checks for valid date only. Another edit checks that the item and its
corresponding date flag are recorded according to standard setter requirements
by date of diagnosis.

The data item may be blank.

General Date Editing Rules:

Date fields are recorded in the D1 date format of year, month, day (CCYYMMDD).
Month and day must have leading zeros for values 01...09.

The following date formats are allowed:

CCYYMMDD    Century+Year, Month and Day are provided.
CCYYMM      Century+Year and Month. Day consists of two blank spaces.
CCYY        Century+Year. Month and Day consist of four blank spaces.

Dates are checked first to ensure they conform to one of these formats, then for
errors in the components. Checking stops on the first non-valid situation.

Range checking:
      Lowest allowed value:  January 1, 1850 (or in D1 format: 18500101)
      Highest allowed value: current system date
      When month is known, it is checked to ensure it falls within range 01...12.
      When month and day are known, day is checked to ensure it falls within range
      for that specific month. Accommodation is made for leap years.

General information on the inter-field editing of date and date flag fields:

The purpose of this inter-field edit is to verify that a date field and the
corresponding date flag field are in agreement. A blank flag field indicates
that the date was either filled in or intentionally not collected. Otherwise
the date flag should include a 2-digit code indicating the reason the date field
is blank.

Date Regional Lymph Node Dissection and its corresponding date flag, Date
Regional Lymph Node Dissection Flag, may both be blank, indicating the date was
intentionally not collected. However, if either field is populated, they must
be in agreement.
```

General Date Editing Rules:
Date fields are recorded in the D1 date format of year, month, day (CCYYMMDD).
Month and day must have leading zeros for values 01...09.

The following date formats are allowed:
CCYYMMDD    Century+Year, Month and Day are provided.
CCYYMM__    Century+Year and Month. Day consists of two blank spaces.
CCYY____    Century+Year. Month and Day consist of four blank spaces.

Dates are checked first to ensure they conform to one of these formats, then for
errors in the components. Checking stops on the first non-valid situation.

Range checking:
Lowest allowed value:  January 1, 1850 (or in D1 format: 18500101)
Highest allowed value: current system date
When month is known, it is checked to ensure it falls within range 01...12.
When month and day are known, day is checked to ensure it falls within range for
that specific month. Accommodation is made for leap years.
```

## *Description*

The purpose of this edit is to verify that all CS derived items required by NPCR are entered (not blank) for cases diagnosed 2004-2015. For diagnosis year 2012-2015, NPCR permits the use of Directly Coded Summary Stage (SEER Summary Stage 2000 [759]) in those cases where collection of CSv02 is not feasible due to lack of data or due to staffing and time constraints at the local or central registry. The data item 'Over-ride CS 20' is used to flag a case where SEER Summary Stage 2000 is recorded in lieu of Derived SS2000 [3020]. When 'Over-ride CS 20' is equal to '1', SEER Summary Stage 2000 must be populated and the derived staging fields must remain blank.

The codes for Over-ride CS 20 are:
1 = Directly coded SEER Summary Stage 2000 [759] used to report Summary Stage and Derived Summary Stage 2000 [3020] must be blank
Blank = Derived Summary Stage 2000 [3020] reported using the Collaborative Stage Data Collection System or case diagnosed prior to 2012

Please note that another edit, "CS Over-ride CS 20, Date of Diagnosis" verifies that Over-ride CS 20 is blank for pre-2012 cases.

This edit is skipped if:
1. Year of Date of Diagnosis is blank.
2. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline) and schema is not Brain, CNSOther, or IntracranialGland
3. CS Schema is invalid
4. Year of Date of Diagnosis is greater than 2015

A. If year of Date of Diagnosis is 2004-2011 or [2012-2015 AND Over-ride CS 20 is blank], then the following CS data items cannot be blank:
- Derived SS2000 [3020]
- CS Version Derived [2936]

B. If year of Date of Diagnosis is 2012-2015 AND Over-ride CS 20 is '1', the following CS data items must be blank:
- CS Version Derived
- Derived SS1977
- Derived SS2000
- Derived AJCC-6 T
- Derived AJCC-6 T Descript
- Derived AJCC-6 N

## *Description*

```
The purpose of this edit is to catch Behavior/Derived SS2000 errors.  It is not
meant to duplicate the calculation of stage performed by the CS algorithm routine.
Its intention is to catch errors that might be due to stage not being re-derived
after a change is made to one of the fields used to calculate Derived SS2000.

This edit is skipped if any of the following conditions is true:
1. Derived SS2000 is blank
2  Case is death certificate only (Type of Reporting Source = 7)
```

**Derived SS2000, Behavior ICDO3 (CS)**

```
3. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline) and
   schema is not Brain, CNSOther, or IntracranialGland.
4. CS schema is invalid

If Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline), then Derived SS2000 must
be 8 (not applicable).

*** See Note 1 below ***
If Behavior Code ICD-O-3 = 2 (in situ)
    and schema = Bladder
    and CS Extension = 100 (Confined to mucosa, NOS)
    then
        Derived SS2000 must not be 0 (in situ) or 8 (not applicable)
Otherwise
If Behavior Code ICD-O-3 = 2 (in situ)
        Derived SS2000 must be 0 (in situ).

*** See Note 2 below ***
If Behavior Code ICD-O-3 = 3 (malignant):
    and Primary Site = Prostate
    and CS Extension = 999
    and CS Site-Specific Factor 3 = 000
    then
        Derived SS2000 must not be 8 (not applicable)
otherwise
If Behavior Code ICD-O-3 = 3 (malignant):
    Derived SS2000 must not be 0 (in situ) or 8 (not applicable).

Note 1:  In situ behavior (Behavior Code ICD-O-3 of 2) generally maps only to a
Derived Summary Stage of 0 (in situ).  The one exception is:  A bladder case coded
with a CS Extension of 100 (Confined to mucosa, NOS) will map to Derived Summary
Stage of 1 (local).

Note 2:  Malignant behavior (Behavior Code ICD-O-3 of 3) generally cannot map to a
Derived Summary Stage of 0 (in situ).  The one exception is:  A prostate case coded
with a CS Extension (clinical extension) of 999 (unknown) and CS Site-Specific
Factor 3 (pathologic extension) of 000 (in situ) will map to Derived Summary Stage
of 0 (in situ).

## *Default Error Message*

[353] Seq_num, Site, Dx_conf conflict (SEER)

## *Description*

If Sequence Number--Central is in the range of 60-99, this edit is skipped.

If a case has been previously reviewed and accepted as coded (Over-ride SeqNo/DxConf = 1), no further editing is done. If Primary Site specifies an ill-defined or unknown primary (C760-C768, C809), no further checking is done.

If any case is one of multiple primaries and is not microscopically confirmed or positive lab test/marker study, i.e., Diagnostic Confirmation > 5 and Sequence Number--Central > 00 (more than one primary), review is required.

Additional Information:

This edit forces review of multiple primary cancers when one of the primaries is coded to a site other than ill-defined or unknown and is not microscopically confirmed or confirmed by a positive lab test/marker study. It is important to verify that the non- microscopically-confirmed case is indeed a separate primary from any others that may have been reported. If the suspect case is accurate as coded, and the number of primaries is correct, set the Over-ride SeqNo/DxConf flag to 1 so that the case will not appear in future edits as an error. It is not necessary to set the over-ride flag on the patient's other primary cancers.

**Diagnostic Confirm, Seq Num--Hosp (COC)**

If it turns out that the non-microscopically-confirmed cancer is considered a manifestation of one of the patient's other cancers, delete the non-microscopically-confirmed case. Check the sequence numbers of remaining cases, correcting them if necessary. Also check for other data items on the remaining cases that may need to be changed, e.g., stage and treatment.

EXAMPLE

| | SITE | DX CONF. |
|---|---|---|
| SEQ. NUM. 01 | PROSTATE, C61.9 | 1, HISTOLOGIC CONF. |
| SEQ. NUM. 02 | BONE, C41.9 | 7, RADIOGRAPHY |

The edit identifies the bone cancer case above (number 02) as an edit error. When the patient's chart is reviewed again, it is determined that the bone lesions were thought to be metastases from the prostate cancer. Delete case number 02, and change the sequence number of the prostate cancer to 00. Check carefully for any demographic, diagnostic, staging, treatment, or follow-up information recorded on the bone abstract that should be added to the prostate cancer case.

[361] Behavior & Dx_conf conflict - ICDO2 (SEER)

## *Description*

This edit is skipped if Behavior (92-00) ICD-O-2 is blank. If a case has been previously reviewed and accepted as coded (Over-ride-Histology = 2 or 3), no further checking is done.

For in situ cases (Behavior (92-00) ICD-O-2 = 2), Diagnostic Confirmation must specify microscopic confirmation (1, 2 or 4).

Additional Information:

The distinction between in situ and invasive is very important to a registry, since prognosis is so different, and in situ cases are usually excluded from incidence rate calculations. Since the determination that a neoplasm has not invaded surrounding tissue, i.e., is in situ, is made via the microscope, cases coded in situ in behavior should have a microscopic confirmation code. However, very rarely, a physician will designate a case noninvasive or in situ without microscopic evidence.

Check that Behavior Code and Diagnostic Confirmation have been coded correctly. Check carefully for any cytologic or histologic evidence that may have been missed in coding. Correction of errors may require inspection of the abstracted text, either online or as recorded on a paper abstract. Review of the original medical record may also be required.

If upon review all items are correct as coded, an over-ride flag may be set so that the case will not be considered in error when the edit is run again. Set the Over-ride--Histology field to 2 (or 3, if the flag is also being set for the Morphology -Type/Behavior (SEER MORPH) edit).

ERROR_TEXT(Date of Diagnosis: %DC)

## *Description*

This edit is skipped if Histology (92-00) ICD-O-2 is empty or year of Date of Diagnosis is greater than 2000 or blank.

If a case has been previously reviewed and accepted as coded (Over-ride Leuk, Lymphoma = 1), no further checking is done.

If Histology (92-00) ICD-O-2 = 9590 - 9717 (lymphoma) then Diagnostic Confirmation cannot be 6 (direct visualization) or 8 (clinical). If Histology (92-00) ICD-O-2 = 9720 - 9941 (leukemia and other) then Diagnostic Confirmation cannot be 6 (direct visualization).

Additional Information:

Since lymphoma and leukemia are almost exclusively microscopic diagnoses, this edit forces review of any cases of lymphoma that have diagnostic confirmation 6 (direct visualization) or 8 (clinical), and any leukemia with a diagnostic confirmation of 6 (direct visualization).

Check that the Histologic Type and Diagnostic Confirmation are correctly coded. Remember that positive hematologic findings and bone marrow specimens are included as histologic confirmation (code 1 in Diagnostic Confirmation) for leukemias. Correction of errors may require inspection of the abstracted text, either online or as recorded on a paper abstract.

If upon review, all items are correct as coded, an over-ride flag may be set so that the case will not be considered in error when the edit is run again. Enter a 1 in the field Over-ride Leuk,Lymphoma to indicate that the coding is correct.

EXAMPLE

```
      HISTOLOGIC TYPE          9821/3
      DIAGNOSTIC CONFIRMATION  6 (DIRECT VISUALIZATION)
```

On review, this leukemia diagnosis was based on a hematologic study, CBC. Correct the Diagnostic Confirmation code to 1 (Positive Histology).

## *Description*

This edit is only performed if year of Date of Diagnosis is 1998-2003, the Behavior Code ICD-O-3 indicates borderline (1), in situ (2) or malignant (3), and EOD--Extension and Histologic Type ICD-O-3 are not blank. (A behavior of 1 is included because the behavior codes of some morphologies changed from 3 to 1 when converted from ICD-O-2 to ICD-O-3.) The edit validates the EOD--Extension for each site as defined in the "SEER Extent of Disease--1988: Codes and Coding Instructions", 3rd ed., 1998.

If Death Certificate Only case (Type of Reporting Source = '7'), for all sites other than prostate, EOD--Extension must = 99. For prostate (C619), EOD--Extension must = 90 for Death Certificate Only cases.

The following table gives the EOD--Extension values allowed for each primary site group. The "In Situ Extension Codes" row lists the values allowed for in situ cases (Behavior Code ICD-O-3 = 2) and the "Malignant Extension Codes" row lists the values allowed for malignant cases (Behavior Code ICD-O-3 = 3). Please note that the groups are listed in the same order as in the SEER EOD manual; however histologically based groups are always edited before the primary site based groups.

## *Description*

```
This edit is only performed if year of Date of Diagnosis is 1998-2003, the Behavior
Code ICD-O-3 indicates borderline (1), in situ (2), or malignant (3), and EOD--
Lymph Node Involv and Histologic Type ICD-O-3 are not blank. (A behavior of 1 is
included because the behavior codes of some morphologies changed from 3 to 1 when
converted from ICD-O-2 to ICD-O-3.) The edit validates the EOD--Lymph Node Involv
for each site as defined in the "SEER Extent of Disease--1988: Codes and Coding
Instructions", 3rd ed., 1998.

If Death Certificate Only case (Type of Reporting Source = '7'), EOD--Lymph Node
Involv must = 9.

The following table gives the EOD--Lymph Node Involv values allowed for each
primary site group.  The "In Situ" row lists the lymph node involvement values
allowed for in situ cases (Behavior Code ICD-O-3 = 2) and the "Malignant" row lists
the lymph node involvement values allowed for malignant cases (Behavior Code ICD-O-
3 = 3). Please note that the groups are listed in the same order as in the SEER EOD
manual; however histologically based groups are always edited before the primary
site based groups.

## *Description*

This edit is only performed if Coding System for EOD = 2, indicating that EOD--Old 13 digit is coded.

For cases coded using the SEER Expanded (13-digit) Site-specific Extent of Disease (Coding System for Extent of Disease = 2) this edit validates extent of disease according to the 13-digit Extent of Disease codes allowable for each

site/morphology as defined in the Extent of Disease - Codes and Coding Instructions Manual (1977).

If the case is in situ (Behavior = 2), the Extent of Disease code must also indicate an in situ behavior:

A zero in the fifth position of the 13-digit extent disease indicates in situ for all sites except:

1. melanomas of the skin (Primary site = C440-C447, C510-C519, C600-C601, C608, C609 and histology = 8720-8790) where a '1' in the fifth position indicates in situ,

2. lung (Primary site C340 - C349) where a '00', '01' or '10' in the fourth and fifth positions indicate in situ,

3. lymph nodes and lymphoid tissues (Primary Sites CO24, CO98-CO99, C142, C379, C422, C770-C779) where as code is provided for in situ.

Similarly an invasive case (Behavior = 3) may not have an in situ extent of disease. Thus the above codes valid for in situ cases are invalid for invasive cases.

## *Description*

This edit is skipped under the following conditions:
1. Year of Date of Diagnosis is blank
2. Registry ID is equal to 0000001544 (New Jersey)

The EOD--Old 13 digit is not required for any case that the:
1. Date of Diagnosis is before 1975;
2. Date of Diagnosis is after 1982; or
3. Type of Reporting Source specifies a death certificate only case (7).

The EOD--Old 13 digit is required for all cases reported from San Mateo (081) and San Francisco (075) counties of the San Francisco/Oakland SMSA registry (0000001501) or from any other registry (0000001502, 0000001520-0000001523, 0000001525-0000001527, 0000001533, 0000001537) diagnosed in 1975 with Primary Site of breast (C500-C509); colon (C180, C182-C187); or rectum and rectosigmoid (C199,C209).

The EOD--Old 13 digit is required for all cases diagnosed in 1976-82 with a Primary Site of breast (C500-C509); colon (C180, C182-C187); or rectum and rectosigmoid (C199, C209).

The EOD--Old 13 digit is required for all cases diagnosed on or after May 1, 1977, with a diagnosis of lymphoma of lymphoid tissue (sites C770-C779, C024, C099, C111, C142, C379, C422 with histologies 9590-9698) or melanoma of skin (sites C440-C447, C510-C519, C600-C601, C608-C609 with histologies 8720-8790).

The EOD--Old 13 digit is required for all cases diagnosed on or after November 1, 1977, with a Primary Site of stomach (C161-C169), lung (C341-C349), cervix uteri (C530-C539), corpus uteri (C540-C548), prostate (C619), or bladder (C670-C676, C678-C679).

The Coding System for Extent of Disease is used to determine if the EOD--Old 13 digit has been submitted. That is, the field Coding System for EOD must = 2.

If an in situ (Behavior 2), the Extent of Disease code must also indicate in situ (0-). Similarly if the case is invasive (Behavior = 3), the extent of disease may not specify in situ (0-).

## *Description*

```
For cases coded using the EOD--Old 2 digit coding scheme (Coding System for
Extent of Disease = 1) this edit validates the extent of disease according to
the Two-digit Site-specific Extent of Disease codes allowable for each site as
defined in the Extent of Disease - Codes and Coding Instructions Manual (1977).

This edit is skipped if any of the following conditions is true:
1. Coding System for EOD is not = 1 (2-Digit Site-Specific Extent of Disease
   (1973-82))
2. Primary Site or Histology (92-00) ICD-O-2 is blank
```

```
3. Case is Lymphoma (Primary Site = C024, C099, C111, C142, C379, C422, C770-779
   and Histology(92-00) ICD-O-2 = 9590-9698)

If EOD--Old 2 Digit is blank, an error is generated.

For Melanoma cases (Histology (92-00) ICD-O-2 = 8720-8790 and Primary Site =
C440-C447, C510-C519, C600, C601, C608, or C609):
   - A table lookup is performed to verify that EOD--Old 2 Digit code is a
     valid code for Melanoma

For all other cases (also including Melanoma cases with Primary Site codes not
listed above):
   - A table lookup is performed to verify that EOD--Old 2 Digit code is a valid
     code for the given Primary Site code

If the case is in situ (Behavior (92-00) ICD-O-2 = 2), the EOD--Old 2 Digit
code must indicate an in situ behavior.  '0-' is valid for all sites.  Also
valid are '01' and '02' for Primary Site codes C171, C172, C180-C189, C199, C209
(jejunum,ileum, colon, rectosigmoid and rectum).

Similarly if the case is invasive (Behavior (92-00) ICD-O-2 = 3), the EOD--Old
2 Digit code may not specify in situ.  Thus '0-' is invalid for all sites if
Behavior = 3.  Also '01' and '02' are invalid for Primary Site codes C171, C172,
C180-C189, C199, C209.

This edit is skipped if any of the following conditions are true:
1. Coding System for EOD is not = 3
2. Primary Site or Histology (92-00) ICD-O-2 is blank
3. Behavior (92-00) ICD-O-2 is not = 2 (in situ) or 3 (invasive)

If Type of Reporting Source = 7, EOD-4 Tumor Size (EOD Old 4 Digit, first 2 positions) must = 99.

If EOD-4 Tumor Size (EOD Old 4 Digit, first 2 positions) is not = 00-99, an error is generated.

Otherwise, this edit verifies that the EOD-4 Tumor Size (EOD Old 4 Digit, first 2 positions) code is a valid code for the given Primary Site and/or Histology (92-00) ICD-O-2 codes. The three groups below (leukemia/lymphoma, site/histology, and site only) are mutually exclusive.

1. Leukemia/lymphoma cases must specify a tumor size of 99:

If Histology (92-00) ICD-O-2) ICD-O-2 = 9590-9595, 9650-9698, 9702-9714, 9740-9741, or 9800-9970, then EOD-4 Tumor Size (EOD Old 4 Digit, first 2 positions) must = 99.

2. Some tumor size codes are based on site and histology:

A. If Primary Site = C189 and Histology (92-00) ICD-O-2 = [8000-8219, 8221-9999]
then EOD-4 Tumor Size (EOD Old 4 Digit, first 2 positions) must = [00-97,99]

B. If Primary Site = C189 and Histology (92-00) ICD-O-2 = 8220
then EOD-4 Tumor Size (EOD Old 4 Digit, first 2 positions) must = [00-98,99]

C. If Primary Site = C420-C424 and Histology (92-00) ICD-O-2 = [8000-9999]
then EOD-4 Tumor Size (EOD Old 4 Digit, first 2 positions) must = 99

D. If Primary Site = C440-C449 and Histology (92-00) ICD-O-2 = [8000-9699, 9702-9999]
then EOD-4 Tumor Size (EOD Old 4 Digit, first 2 positions) must = [00-97,99]

E. If Primary Site = C440-C449 and Histology (92-00) ICD-O-2 = [9700-9701]
then EOD-4 Tumor Size (EOD Old 4 Digit, first 2 positions) must = [99]

3. Some tumor size codes are based on site only:

A. If Primary Site = [C000-C148, C170-C259, C300-C340, C379-C388, C400-C479, C490-C499, C510-C559, C570-C759]
then EOD-4 Tumor Size (EOD Old 4 Digit, first 2 positions) must = [00-97,99]

B. If Primary Site = [C150-C169, C341-C349, C500-C509]

## *Description*

For cases coded using the EOD--Old 4 digit coding scheme (Coding System for Extent of Disease = 3), this edit validates the EOD-4 Lymph Nodes (EOD--Old 4 Digit, 4th position)according to the codes allowable for each site as defined in Extent of Disease New 4-Digit Schemes - Codes and Coding Instructions (1983).

This edit is skipped if any of the following conditions are true:
1. Coding System for EOD is not = 3
2. Primary Site or Histology (92-00) ICD-O-2 is blank
3. Behavior (92-00) ICD-O-2 is not = 2 (in situ)

If Type of Reporting Source = 7, EOD-4 Lymph Nodes (EOD--Old 4 Digit, 4th position) must = 9.

If EOD-4 Lymph Nodes (EOD--Old 4 Digit, 4th position) is not = 0-9, an error is generated.

Otherwise, this edit verifies that the EOD-4 Lymph Nodes  is a valid code for the given Primary Site and/or Histology (92-00) ICD-O-2 codes for in situ cases:

1.  The program uses the Primary Site and Histology (92-00) ICD-O-2 codes to do a lookup on the EOD4_SITEHIST_LN table.  If found, then EOD-4 Lymph Nodes (EOD--Old 4 Digit, 4th position) is compared to the table's list of allowable in situ lymph node codes.  If not found, an error is generated.

2.  If the Primary Site and Histology (92-00) ICD-O-2 codes are not found on the EOD4_SITEHIST_LN table, then Primary Site is used to do a lookup on the EOD4_SITE_LN_INSITU table.  If found, then EOD-4 Lymph Nodes (EOD--Old 4 Digit, 4th position) is compared to the table's list of allowable in situ lymph nodes codes. If not found, an error is generated.

**EOD--Old 4 digit_6, LymphNodes-Malig (SEER IF264DIG_P6)**

3. If the various Primary Site and Histology (92-00) ICD-O-2 code combinations are not found on any of the above tables, the case passes.

If Death Certificate only case (Type of Reporting Source = '7') the Regional Nodes Positive and Regional Nodes Examined must both be coded 99.

For the following sites and histologies (ICD-O-2), Regional Nodes Positive and Regional Nodes Examined must both be coded '99'.

For all cases, the following is checked:

1. If Regional Nodes Examined = 00 , Regional Nodes Positive must = 98.

2. If Regional Nodes Examined = 01 - 90, Regional Nodes Positive must = 97 or 99, or be less than or equal to Regional Nodes Examined.

## *Description*

If year of Date of Diagnosis is blank, this edit is skipped.

This edit is only performed if Coding System for EOD = 4, indicating that 10-digit EOD is coded and year of diagnosis after 1997. The edit is skipped if Morph--Type&Behav ICD-O-3 is blank. The edit validates the Extent of Disease according to

**Extent of Disease 12-Digit ICDO3 (SEER IF26E98)**

the 10-digit EOD for each site as defined in the "SEER Extent of Disease--1988: Codes and Coding Instructions", 3rd ed., 1998.

The behavior code is checked against the extent of disease fields to verify validity (1, 2, or 3). (A behavior code of 1 is allowed because the behavior codes of some morphologies changed from 3 to 1 when converted from ICD-O-2 to ICD-O-3.)

If Death Certificate only case (Type of Reporting Source = '7') the SEER 10-digit Extent of Disease must be '999909999990' for prostate cases and '9999999999 ' for all other cases.

If Number of Regional Nodes Positive is 01-97, then Lymph Nodes must be = 1-8. This check is not performed for the following sites and types:

| | |
|---|---|
| Kaposi sarcoma, | M-9140 |
| Hematopoietic | M-9731-9989 |
| Lymphomas, | M-9590-9699,9702-9729 |
| Mycosis fungoides, | M-9700-9701 |
| Brain | T-C70.0, C71._ |
| Other CNS, | T-C70.1,C70.9,C72.0-C72.5,C72.8 |
| Other and ill-defined, | T-C76.0-C76.8,C80.9,C42._,C77._ |

For the following sites and types, Regional Nodes Positive and Regional Nodes Examined must both be coded '99'.

Brain, T-C70.0, C71._

Other CNS, T-C70.1, C70.9, C72.0-C72.5, C72.8,C72.9

Other and ill-defined, T-C760.0-C760.5, C76.5,C767.7, C767.8, C80.9, C42._, C77._

Hematopoietic, etc., M-9731-9989

Lymphomas, M-9590-9699, 9702-9729

## *Administrative Notes*

In the SEER*Edits software, the title of this edit is: IF26E98

Modifications:

NAACCR v11.2:
8/2007
Edit modified to adhere to SEER standards in effect for diagnosis years 1998-2003: if Regional Nodes Examined = 90 (90 or more nodes were examined), then Regional Nodes Positive must = 00-95 (exact number of nodes positive), 96 (96 or more nodes are positive), 97 (positive nodes are documented, but the number is unspecified), or 99 (unknown whether nodes are positive; not applicable; not stated in patient record).

NAACCR v11.3:
6/2008
Updated Administrative Notes with the title of the corresponding edit in the SEER*Edits software.

NAACCR v11.3A:

**Extranodal Extension Clin (non-Head and Neck), Date DX (NAACCR)**

Deleted USR4 (check flags) logic because it is no longer needed.

NAACCR v12.0
- Modified to use the date format of CCYYMMDD and the new interoperability date functions and rules.

NAACCR v15A
- Updated to no longer use binary tables; edit will be skipped if year of diagnosis is not 1998-2003
- Removed code:
If Regional Nodes Examined = 95, Regional Nodes Positive must = 00, 95, or 99.

   d. Regional Nodes Positive and Regional Nodes Examined are both blank
      e. CoC Accredited Flag is not 1

2. If Extranodal Extension non-Head and Neck Pathological = 0 or 1
   (positive nodal involvement), Regional Nodes Positive must not = 00 or 98 and

## *Description*

This field is allowed to be blank because the item was not required after 2000. Another edit (Histology ICD02, Date DX, Date 1st Contact) verifies that this item is not blank if the year of Date of Diagnosis (or, if Date of Diagnosis is unknown, Date of 1st Contact),is less than 2001. Registries should include both edits in their edit set.

Must be a valid Histology (92-00) ICD-O-2 code (8000-9989). A table lookup verifies that the code is included in the International Classification of Diseases for Oncology, Second Edition (ICD-O-2).

## *Administrative Notes*

Modifications

NAACCR v13A
- Edit updated so that it does a table lookup.
Previous version performed a range check only and another edit [Morphology--Type/Behavior (SEER MORPH)] included the table lookup to verify that Histology (92-00) ICD-O-2 is a valid ICD-O-2 code. Both edits now include the table lookup.

**Histologic Type ICDO3 (SEER)**

NAACCR v15A
- Edit logic rewritten to use HISICD02.DBF (Histology ICD-O-2) instead of MORPH.BIN.

## *Description*

This edit is skipped if any of the fields are blank.

ICDA-8 & ICD-9 codes consist of 4 digits while ICD-10 consists of an upper case letter followed by 2 or 3 digits. This version of the edit allows 3-character ICD-10 codes to be coded with either a 9 or a blank in the fourth character.

If Cause of Death = 0000 (alive), then ICD Revision Number for Cause of Death must = 0 (alive); if ICD Revision Number = 0 (alive), then Cause of Death must = 0000 (alive).

Cause of Death codes 7777 (state death certificate not available) and 7797 (state death certificate available, but cause of death is not coded) are valid for all ICD revision numbers.

**ICD Revision Number, Cause of Death (SEER IF37)**

If the ICD Revision Number for Cause of Death is 7, 8, 9 or 10, the Cause of Death must be a valid code of the 7th, 8th, 9th, or 10th revision of ICD. The valid codes for each revision may be found in the appropriate volume published by the World Health Organization. See the SEER Program Code Manual for special rules for coding Underlying Cause of Death.

## *Description*

ICDA-8 & ICD-9 codes consist of 4 digits while ICD-10 consists of an upper case letter followed by 2 or 3 digits. This version of the edit allows 3-character ICD-10 codes to be coded with either a 9 or a blank in the fourth character.

If Cause of Death = 0000 (alive), then ICD Revision Number for Cause of Death must = 0 (alive); if ICD Revision Number = 0 (alive), then Cause of Death must = 0000 (alive).

Cause of Death codes 7777 (state death certificate not available) and 7797 (state death certificate available, but cause of death is not coded) are valid for all ICD revision numbers.

If the ICD Revision Number for Cause of Death is 7, 8, 9 or 10, the Cause of Death must be a valid code of the 7th, 8th, 9th, or 10th revision of ICD. The valid codes for each revision may be found in the appropriate volume published by the World Health Organization. See the SEER Program Code Manual for special rules for coding Underlying Cause of Death.

Modifications:

NAACCR v11.3
1/2008
This edit was modified so that it will force the Cause of Death code to be displayed in the list of fields even though it is not actually used in the edit logic. Displaying the Cause of Death code should make it easier to resolve this edit since this error is often caused by the Cause of Death code being coded to the wrong ICD version.

NAACCR v12.0
- Modified to use the date format of CCYYMMDD and the new interoperability date functions and rules.

## *Administrative Notes*

This edit differs from the SEER edit "Laterality, Primary Site,
Date of Diag (SEER IF24)" in that:
1. Except for the CNS sites, it does not use the Date of Diagnosis when requiring a laterality code other than zero for paired organ sites.
2. Laterality code 5 (Paired site: midline tumor) is allowed for all years of diagnosis.

Modifications:

NAACCR v12.0
- Modified to use the date format of CCYYMMDD and the new interoperability date functions and rules.
- Deleted logic requiring non-paired sites with diagnosis dates 2003+ to be coded with Laterality of 0; that is, non-paired sites may now be coded with laterality. This is true for all years of diagnosis.
- Edit is no longer skipped if Primary Site = C300, C340, C413, or C414.

NAACCR version of this edit will be deleted.

NAACCR v15A
- Description updated to specify use of code '5' (midline) for C443 and C445; logic is correct as is

## *Administrative Notes*

In the SEER*Edits software, the title of this edit is: IF24

This edit differs from the COC edit "Laterality, Primary Site,
Date of Diag (COC)" in that:
1. The COC version, except for the CNS sites, does not use the Date of Diagnosis when requiring a laterality code other than zero for
paired organ sites.
2. The COC version allows Laterality code 5 (Paired site: midline tumor)for all years of diagnosis; the SEER version allows code 5
only for cases diagnosed 2010 and later.

## *Description*

This edit is skipped if any of the following is true:
1. Histologic Type ICD-O-3 is empty
2. Histologic Type ICD-O-3 >= 9590
3. Diagnosis year is greater than 1987 or is blank, and Histologic Type ICD-O-3 =
9140
4. Over-ride Site/Lat/Morph field contains a '1'(review complete)

If the Primary Site is a paired organ (see lists below) and the Behavior Code ICD-
O-3 is in
situ (`2'), then Laterality must be `1', `2', '3', or `5', meaning right: origin of
primary;
left: origin of primary; or only one side involved, right or left origin
unspecified; paired
site: midline tumor.

For all diagnosis years the following are considered paired organ sites for
purposes of this
edit:

    C079      Parotid gland
    C080      Submandibular gland
    C091      Tonsillar pillar
    C098-C099 Tonsil, NOS
    C301      Middle ear
    C310      Maxillary sinus
    C312      Frontal sinus
    C341-C349 Lung
    C384      Pleura
    C500-C509 Breast
    C569      Ovary
    C570      Fallopian tube
    C620-C629 Testis
    C630      Epididymis
    C631      Spermatic cord
    C649      Kidney, NOS
    C659      Renal pelvis
    C669      Ureter
    C690-C699 Eye
    C740-C749 Adrenal gland
    C754      Carotid body

For cases diagnosed after 1978 or if diagnosis date is blank, the following are
also considered
paired organ sites for purposes of this edit:

    C081      Sublingual gland
    C090      Tonsillar fossa
```

**LDH Post-Orchiectomy Range, Date DX (NAACCR)**

```
C400      Long bones of upper limb, scapula and associated joints
C401      Short bones of upper limb and associated joints
C402      Long bones of lower limb and associated joints
C403      Short bones of lower limb and associated joints
C441      Skin of eyelid
C442      Skin of external ear
C446      Skin of upper limb and shoulder
C447      Skin of lower limb and hip
C471      Peripheral nerves and autonomic nervous system of upper
          limb and shoulder
C472      Peripheral nerves and autonomic nervous system of lower
          limb and hip
C491      Connective, subcutaneous, and other soft tissues of upper
          limb and shoulder
C492      Connective, subcutaneous, and other soft tissues of lower
          limb and hip

For cases diagnosed 2018 and later, laterality is no longer required for C090 and
C091.

## *Description*

If Registry ID = 0000001542 (Kentucky) AND [year of Date of Diagnosis < 2000 or blank] AND Marital Status at DX is blank, no further editing is performed.

If Age at Diagnosis < 15, Marital Status at DX must = 1 (single, never married).

Additional Information:

This edit assumes that persons diagnosed with cancer at ages less than 15 are single (never married). Even if a marital status is not specified in the medical record, do not code marital status unknown if the patient is under 15 years of age at diagnosis. Check that the marital status is coded correctly and that the age, date of birth and date of diagnosis are correct. These two dates are not actually used in the edit; however, they may have been used to calculate the age at diagnosis, which is used in this edit.

## *Administrative Notes*

This edit differs from the NAACCR edit of the same name in that it allows the field to be blank because the item was not required by the COC until 1996. Another edit (Medical Record Number, Date of Diagnosis) verifies that this item is not blank if the year of Date of Diagnosis is greater than 1995 and not equal 9999. COC-approved programs should include both edits in their edit set.

Morphology -ICD-O, First Edition

If year of Date of Diagnosis is blank, this edit is skipped.

This edit is skipped for cases diagnosed 1988-1991 from California excluding
SF/SJ&LA (Registry ID[40] = 0000001541).
```

**Morph (1973-91) ICD-O-1 (SEER OMORPnos)**

This edit is skipped for cases diagnosed before 2000 from New Jersey (Registry ID 0000001544).

The morphology field is defined by the ICD-O, First Edition, with some SEER specific additions to the histology codes and grade codes.

The following morphology (histology/behavior) codes are SEER specific additions:

| | |
|---|---|
| 8522/3 | Infiltrating duct carcinoma and lobular carcinoma |
| 8523/3 | Infiltrating duct carcinoma and lobular carcinoma in situ |
| 8524/3 | Intraductal carcinoma and lobular carcinoma |
| 8522/2 | Intraductal carcinoma and lobular carcinoma in situ |
| 8543/3 | Paget's disease with intraductal carcinoma |
| 9616/3 | Lennert's lymphoma |
| 9624/3 | Malignant lymphoma,, lymphocytic, poorly differentiated, diffuse |
| 9723/3 | True histiocytic lymphoma |

The following grade codes are SEER specific additions to ICD-O, First Edition:

| | |
|---|---|
| 5 | T-cell |
| 6 | B-cell |
| 7 | Null cell |

SEER accepts only behavior codes of '2' and '3'.

The subfields of morphology, histology, behavior and grade, are also checked for consistency among themselves. Checks are made for combinations which review may be correct, and combinations considered impossible. Review flags are provided to indicate a combination requiring review is indeed correct. The review flags can not be used to indicate an impossible combination is correct. Each of these checks are defined in detail below.

Histology/Grade:

1. The following histology/grade combinations are impossible: grades 5-7 with histologies not in the range 9590-9940

2. Some terms in ICD-O, First Edition, carry an implied statement of grade. These histologies must be reported with the correct grade as stated below:

| | |
|---|---|
| 8020/34 | Carcinoma, undifferentiated |
| 8021/34 | Carcinoma, anaplastic |
| 8331/31 | Follicular adenocarcinoma, well differentiated |
| 8851/31 | Liposarcoma, well differentiated |
| 9062/34 | Seminoma, anaplastic |
| 9082/34 | Malignant teratoma, undifferentiated |
| 9083/32 | Malignant teratoma, intermediate type |
| 9390/34 | Choroid plexus papilloma, anaplastic |
| 9401/34 | Astrocytoma, anaplastic |
| 9451/34 | Oligodendroglioma, anaplastic |
| 9511/31 | Retroblastoma, differentiated |
| 9512/34 | Retroblastoma, undifferentiated |

**Morph (1973-91) ICD-O-1 (SEER OMORPnos)**

3. The following lymphomas must carry either the implied grade or the T-cell, B-cell, null cell designation as grade:

| | |
|---|---|
| 9600/34 | Malignant lymphoma, undifferentiated, NOS |
| 9621/32 | Malignant lymphoma, lymphocytic, intermediate differentiation, NOS |
| 9630/33 | Malignant lymphoma, lymphocytic, poorly differentiated, NOS |
| 9693/31 | Malignant lymphoma, lymphocytic, well differentiated, nodular |
| 9694/32 | Malignant lymphoma, lymphocytic, intermediate differentiation, nodular |
| 9696/33 | Malignant lymphoma, lymphocytic, poorly differentiated, nodular |

Histology/Behavior:

1. "Benign histologies": In the numeric section of ICD-O, First Edition, are a set of histologies (first four digits) listed only with behavior codes of `1,' benign, and/or `1,' uncertain if benign or malignant. This edit requests review of any case reported with one of these histologies and a behavior of `2,' in situ, or `3,' invasive. Use of the behavior matrix of ICD-O, First Edition, allows for the elevation of the behavior of such histologies. Thus a review flag is provided to indicate that the case has been reviewed and is correct. For example, a report of a malignant psammomatous meningioma would require review.

2. In situ histologies: The following histologies are not accepted with a behavior code `2' in situ:

8000-8004
8020, 8021
8331, 8332
8523, 8524
8543
8800-9054
9062
9082, 9083
9110-9960

==========

The morphology field is defined by the International Classification of Diseases for Oncology, 1986 Field Trial.

Special flag is used to denote those codes deleted from ICD-O First Edition.

SEER accepts only behavior codes of `2' and `3'.

The subfields are also checked for consistency among themselves. Checks are made for combinations which upon review may be correct, and combinations considered impossible. Review flags are provided to indicate a combination requiring review is indeed correct. The review flags can not be used to indicate an impossible combination is correct. Each of these checks are defined in detail below.

**Morph (1973-91) ICD-O-1 (SEER OMORPnos)**

## *Description*

This edit is skipped if any of the following conditions is true:
1. Year of Date of Diagnosis is greater than 2000 or blank
2. Histology (92-00) ICD-O-2 is empty.

The morphology field is defined by the International Classification of Diseases for Oncology, Second Edition (ICD-O-2) and consists of the following subfields:

Histology (92-00) ICD-O-2 - 4 digits
Behavior (92-00) ICD-O-2 - 1 digit
Grade - 1 digit

I. Single Subfield Checks

Only those histology and grade codes defined by ICD-O-2 are valid.

A. Histology--must contain a number between 8000-9999. However, not all numbers in this range are valid, so a further check is performed. Codes are validated at two levels. Histology codes listed with behavior codes of 2 or 3 in ICD-O-2 are considered valid whenever they appear.

Codes listed in ICD-O-2 with behavior codes of only 0 or 1 are also considered valid (i.e.,"reportable"), since use of the behavior matrix of ICD-O-2 allows for the elevation of the behavior of such histologies when the neoplasm is in situ or malignant. However, this edit requires review of these cases to verify that they are indeed in situ or malignant. If the histology and behavior are correct on review, then Over-ride--Histology is to be set to 1 (or 3, if the flag is used for both this edit and SEER IF31). An internal binary table is used to represent the histologies listed in ICD-O-2 according to their listed behaviors.

B. Grade--valid codes are 1-9.

II. Multi-Subfield Checks

The subfields are also checked for consistency among themselves.Each of these checks is defined in detail below.

A. Histology/Grade:
The over-ride cannot be used to indicate that these impossible combinations are correct.

1. The following histology/grade combinations are impossible:
grades 5-8 with histologies not in the range 9590-9941

2. Some terms in ICD-O-2 carry an implied statement of grade. These histologies must be reported with the correct grade as stated below:

8020/34 Carcinoma, undifferentiated
8021/34 Carcinoma, anaplastic

**Morphology--Type/Behavior ICDO2 (SEER MORPH)**

8331/31 Follicular adenocarcinoma, well differentiated
8851/31 Liposarcoma, well differentiated
9062/34 Seminoma, anaplastic
9082/34 Malignant teratoma, undifferentiated
9083/32 Malignant teratoma, intermediate type
9401/34 Astrocytoma, anaplastic
9451/34 Oligodendroglioma, anaplastic
9511/31 Retinoblastoma, differentiated
9512/34 Retinoblastoma, undifferentiated

3. The following lymphomas must carry either the implied grade or the T-cell, B-cell, null cell, or NK cell designation as grade:

9693/3 Malignant lymphoma, lymphocytic, well differentiated, nodular cannot be 2,3,4 or 9
9696/3 Malignant lymphoma, lymphocytic, poorly differentiated,nodular cannot be 1,2,4, or 9

B. Histology/Behavior:

In situ histologies: The following histologies are not accepted with a behavior code `2' insitu:

8000-8004
8020, 8021
8331, 8332
8800-9054
9062
9082, 9083
9110-9491
9501-9989

NOTE:
Over-ride Histology is also used for SEER edit IF31. Code 3 in Over-ride Histology indicates that both SEER's MORPH edit and IF31 are being over-ridden.

Additional Information:

This edit checks the validity of the histologic type subfields morphology and grade, and then performs several checks of the subfields morphology, behavior, and grade against each other. The subfield behavior is checked in a separate edit. The specific error message will identify which part of the code is problematic or which subfields are inconsistent.

1. The edit requires review of a case in which the 4-digit morphology code is one that appears in ICD-O-2 only with behavior codes of 0 or 1. Verify the coding of morphology, and that the behavior should be coded malignant or in situ. The registrar may need to consult a pathologist or medical advisor in problem cases. If the case is correctly coded, set the Over-ride--Histology flag to 1 (or 3, if the flag is also being set for the edit Diagnostic Confirmation, Behavior Code (SEER IF31).

**Morphology--Type/Behavior ICDO2 (SEER MORPH)**

2. Histology and grade are compared, and certain errors identified (these cannot be over-ridden). These are specified in detail in the "Description" field of the documentation.

- Grade codes 5-8 are T-cell, B-cell, and NK cell indicators used for leukemias and lymphomas only. Therefore, codes 5-8 may only be used with morphologies in the range 9590-9941.

- Some terms in ICD-O-2 carry an implied grade, and the appropriate grade code(s) must be used. These are specified in detail in the "Description" section of the documentation.

3. Histology and behavior codes are compared, and some combinations of in situ behavior and histology are not allowed. (These histologies are specified in the "Description" section of the documentation.) "In situ" is a concept that only pertains to epithelial neoplasms; therefore, an in situ behavior is not allowed with non-epithelial morphologies, such as sarcomas, leukemias, and lymphomas. In situ behavior is also disallowed for a handful of codes representing epithelial neoplasms which, by their nature, cannot be in situ.

Errors from this edit usually result from misapplication of coding rules. Correction of errors may require inspection of the abstracted text, either online or as recorded on a paper abstract. Review of the original medical record may be necessary. Review the coding of each subfield. Consult a pathologist or medical advisor when necessary.

EXAMPLE

| | |
|---|---|
| HISTOLOGIC TYPE | 9650/3, HODGKIN'S DISEASE, NOS |
| BEHAVIOR CODE | 2, IN SITU |
| GRADE | 9, UNKNOWN |

A behavior code of 2, in situ, is not correct for Hodgkin's disease. Change the behavior to 3, malignant.

This edit is skipped if any of the following conditions are true:
1. Histologic Type ICD-O-3 is blank

The morphology field is defined by the International Classification of Diseases for
Oncology,
Third Edition (ICD-O-3) and consists of the following subfields:

    Histologic Type ICD-O-3 - 4 digits
    Behavior Code ICD-O-3 - 1 digit

I.  Single Subfield Checks

    A. Histology (Histologic Type ICD-O-3)-- must contain a valid ICD-O-3
       code.

       1. To accommodate the new Hematopoietic and Lymphoid Neoplasm Rules
       effective for cases diagnosed 1/1/2010 and later:

             The following Histologic Type ICD-O-3 codes are allowed only for
       cases with a year of Date of Diagnosis of 2010 and later:
       9597, 9688, 9712, 9724, 9725, 9726, 9735, 9737, 9738, **9751, 9759,

       9991, 9992

             **considered benign and/or borderline prior to 2010 and, if coded with
       Behavior ICD-O-3 code of 3, required an over-ride.  For cases diagnosed
       2010 or later, these histologies are now reportable (with Behavior ICD-O-3
       code of 3) and an over-ride should not be used.

             2. To accommodate the ICD-O-3 codes effective for cases diagnoses
1/1/2017
       and later:

             The following Histologic Type ICD-O-3 code with Behavior Code ICD-O-3
is
       allowed only for cases with a year of Date of Diagnosis of 2017 and later:
       8343/2

       3. To accommodate the ICD-O-3 codes effective for cases diagnosed
             1/1/2018 and later:

             The following Histologic Type ICD-O-3 codes are allowed only for
       cases with a year of Date of Diagnosis of 2018 and later:
       8023, 8054, 8085, 8086, 8158, 8163, 8256, 8257, 8265, **8311, 8339, 8474,

```

**Morphology--Type/Behavior ICDO3 (SEER MORPH)**

**considered benign and/or borderline prior to 2018 and, if coded with Behavior ICD-O-3 code of 3, required an over-ride. For cases diagnosed 2018 or later, these histologies are now reportable (with Behavior ICD-O-3 code of 3) and an over-ride should not be used.

II. Multi-Subfield Checks

The subfields are also checked for consistency among themselves. Each of these checks is defined in detail below.

Histology code 9421 (juvenile astrocytoma), although moving from behavior code 3 in ICD-O-2 to 1 in ICD-O-3, will CONTINUE to be collected with a behavior of 3 and it cannot be over-ridden.

Histology codes 8077 and 8519 are not accepted with a behavior code `3' (malignant) and cannot be over-ridden.

The following histology codes are not accepted with behavior code '2' in situ: 8000-8005, 8020, 8021, 8331, 8332, 8800-9055, 9062, 9082, 9083, 9110-9493, 9501-9992. Upon review, these cases can be over-ridden using Over-ride Histology.

NOTE:
Over-ride Histology is also used for SEER edit IF31. Code 3 in Over-ride Histology indicates that both SEER's MORPH edit and IF31 are being over-ridden.

Additional Information:

This edit checks the validity of the ICD-O-3 histologic type subfields histology and behavior. The subfield behavior is checked in a separate edit. The specific error message will identify which part of the code is problematic or which subfields are inconsistent.

Histology and behavior codes are compared, and some combinations of in situ behavior and histology are not allowed. (These histologies are specified in the "Description" section of the documentation.) "In situ" is a concept that only pertains to epithelial neoplasms; therefore, an in situ behavior is not allowed with non-epithelial morphologies, such as sarcomas, leukemias, and lymphomas. In situ behavior is also disallowed for a handful of codes representing epithelial neoplasms which, by their nature, cannot be in situ.

Errors from this edit usually result from misapplication of coding rules. Correction of errors may require inspection of the abstracted text, either online or as recorded on a paper abstract. Review of the original medical record may be necessary. Review the coding of each subfield. Consult a pathologist or medical advisor when necessary.

EXAMPLE

A behavior code of 2, in situ, is not correct for Hodgkin

**Morphology--Type/Behavior ICDO3 (SEER MORPH)**

```
This edit is skipped if Mult Tum Rpt as One Prim is blank or if Type of Reporting
Source is 7 (death certificate only) or Date of Diagnosis is blank.

A. If year of Date of Diagnosis is less than 2010:
   1. If Primary Site is C809 (unknown primary) or Histologic Type ICD-O-3
      is 9590-9992 (lymphoma, leukemia, and immunoproliferative disease),
      then Mult Tum Rpt as One Prim must equal 88 (not collected/not
      applicable for this site).
   2. For all other cases, Mult Tum Rpt as One Prim must not equal 88.

B. If year of Date of Diagnosis is 2010 or later:
   1. If Histologic Type ICD-O-3 is 9751-9758, 9765-9769, and 9970, the
      remaining logic is skipped.

   2. If year of Date of Diagnosis is 2010:
      a. For the following sites and histologies, Mult Tum Rpt as One Prim
         must equal 88:
           Primary Site is C809 (unknown primary)

        OR
      [Primary Site is C770-C779 (lymph nodes) or C421 (bone marrow)
       AND Histologic Type ICD-O-3 is 9590-9729, 9735-9738(lymphoma)]
        OR
      Histologic Type ICD-O-3 is 9732-9733, 9741-9742, 9759-9764,

b. For all other cases, Mult Tum Rpt as One Prim must not equal 88.
   - There is one exception: if the year of diagnosis is 2011 and
   case is lymphoma not coded to lymph nodes or bone marrow
   the case may be coded according to either 2010 or 2011 rules;
   that is, if Histologic Type ICD-O-3 = 9590-9729, 9735-9738 and

In the SEER*Edits software, the title of this edit is: IF206

Modifications

NAACCR v11.3A
11/2008

NAACCR v12.0:
- Hematopoietic histology checking changed to be consistent with new rules and is based on year of Date of Diagnosis.

NAACCR v12D
- For cases diagnosed 2010+:
-- Histology codes 9751-9758, 9765-9769, and 9970 are skipped
-- The list of histology codes requiring that Mult Tum Rpt as One Prim = 88 changed from:
9590-9730, 9732-9733, 9741-9742, 9751-9754, 9760-9910, 9930-9992

-- If histology not equal to the above revised list of histologies, Mult Tum Rpt as One Prim must not = 88

NAACCR v12.2A
- For lymphoma cases NOT coded to lymph nodes or bone marrow: for diagnosis year 2011, code 88 (not collected/not applicable) is allowed, but not required; for cases diagnosed 2012 and later, 88 is no longer allowed.
- Error messages were updated.

This edit is skipped if Multiplicity Counter is blank or if Type of Reporting

A. If year of Date of Diagnosis is less than 2010:

      is 9590-9992 (lymphoma, leukemia, and immunoproliferative disease),

      then Multiplicity Counter must equal 88 (not collected/not
      applicable for this site).
   2. For all other cases, Multiplicity Counter must not equal 88.

B. If year of Date of Diagnosis is 2010 or later:
   1. If Histologic Type ICD-O-3 is 9751-9758, 9765-9769, and 9970, the
      remaining logic is skipped.

   2. If year of Date of Diagnosis is 2010:
      a. For the following sites and histologies, Multiplicity Counter
         must equal 88:
           Primary Site is C809 (unknown primary)
             OR
           Histologic Type ICD-O-3 is 9590-9729, 9732-9733, 9735-9738,

           (lymphoma, leukemia, and immunoproliferative disease)
     b. For all other cases, Multiplicity Counter must not equal 88.

   3. If year of Date of Diagnosis is 2011 or later:

         equal 88:
           Primary Site is C809 (unknown primary)
             OR
           [Primary Site is C770-C779 (lymph nodes) or C421 (bone marrow)
            AND Histologic Type ICD-O-3 is 9590-9729, 9735-9738(lymphoma)]

           immunoproliferative disease)
      b. For all other cases, Multiplicity Counter must not equal 88.
         - There is one exception: if the year of diagnosis is 2011 and
         case is lymphoma not coded to lymph nodes or bone marrow,
         the case may be coded according to either 2010 or 2011 rules;
         that is, if Histologic Type ICD-O-3 = 9590-9729, 9735-9738 and

Modifications

NAACCR v11.3A
11/2008
- Added:
If Primary Site is not C809 (unknown primary) and Histologic Type ICD-O-3 is not 9590-9989 (lymphoma, leukemia, and
immunoproliferative disease), then Multiplicity Counter must not equal 88.

NAACCR v12.0:

**NAACCR Record Version (NAACCR)**

- Hematopoietic histology checking changed to be consistent with new rules and is based on year of Date of Diagnosis.

NAACCR v12D
- For cases diagnosed 2010+:
-- Histology codes 9751-9758, 9765-9769, and 9970 are skipped
-- The list of histology codes requiring that Multiplicity Counter = 88 changed from:
9590-9730, 9732-9733, 9741-9742, 9751-9754, 9760-9910, 9930-9992

-- If histology not equal to the above revised list of histologies, Multiplicity Counter must not = 88

NAACCR v12.2A
- Edit logic corrected so that edit will be skipped for cases diagnosed 2010+ with histologies 9751-9758, 9765-9769, 9970.
(Description was correct, logic was wrong.)
- For lymphoma cases NOT coded to lymph nodes or bone marrow: for diagnosis year 2011, code 88 (not collected/not applicable)
is allowed, but not required; for cases diagnosed 2012 and later, 88 is no longer allowed.
- Error messages were updated.

## *Description*

NPI--Archive FIN must be a 10-digit number or blank. 0000000000 and 9999999999 are not allowed.

Tne NPI consists of nine numeric digits followed by a one numeric check digit. A check digit validation is performed using the Luhn Algorithm. The algorithm proceeds in three steps. First, every second digit, beginning with the next-to-rightmost and proceeding to the left, is doubled. If that result is greater than nine, its digits are summed (which is equivalent, for any number in the range 10 though 18, of subtracting 9 from it). Thus a 2 becomes 4 and a 7 becomes 5 (7 X 2 = 14, 14 becomes 1 + 4 = 5). Second, all the digits are summed. (Note: 24 is added to the sum, to account for the ISO prefix for USA (80840) when stored as part of an ID card. The prefix must be accounted for, so the NPI check will be the same with or without the prefix.) Third, the result is divided by 10. If the remainder is zero, the original number is valid.

## *Description*

NPI--Physician--Managing must be a 10-digit number or blank. 0000000000 and 9999999999 are not allowed.

Tne NPI consists of nine numeric digits followed by a one numeric check digit. A check digit validation is performed using the Luhn Algorithm. The algorithm proceeds in three steps. First, every second digit, beginning with the next-to-rightmost and proceeding to the left, is doubled. If that result is greater than nine, its digits are summed (which is equivalent, for any number in the range 10 though 18, of subtracting 9 from it). Thus a 2 becomes 4 and a 7 becomes 5 (7 X 2 = 14, 14 becomes 1 + 4 = 5). Second, all the digits are summed. (Note: 24 is added to the sum, to account for the ISO prefix for USA (80840) when stored as part of an ID card. The prefix must be accounted for, so the NPI check will be the same with or without the prefix.) Third, the result is divided by 10. If the remainder is zero, the original number is valid.

```
This data item identifies the total number of phases administered to the patient
during the first course of treatment. A "phase" consists of one or more
consecutive treatments delivered to the same anatomic volume with no change in
the treatment technique. Although the majority of courses of radiation therapy
are completed in one or two phases (historically the "regional" and "boost"
treatments), there are occasions in which three or more phases are used, most
typically with head and neck malignancies.

## *Description*

This edit checks for all obsolete CS Extension codes. Obsolete codes should be re-coded per Collaborative Stage guidelines.

This edit is skipped if any of the following conditions is true:
1. CS Extension is blank
2. Date of Diagnosis is blank
3. CS Version Input Original is blank

This edit first determines the correct CS schema by doing a function call to the CS Dynamic Link Library (dll). The function call passes Primary Site, Histologic Type ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS schema name is returned.

Using the returned schema name, CS table number (CS Extension is table number 2), and CS Extension code, a table lookup is performed. If the code for a particular schema is determined to be obsolete based on the table lookup, the type of obsolete code must be evaluated. There are several types of obsolete codes:

1. OBSOLETE DATA CONVERTED AND RETAINED V0200
2. OBSOLETE DATA CONVERTED V0102
3. OBSOLETE DATA CONVERTED V0104
4. OBSOLETE DATA CONVERTED V0200
5. OBSOLETE DATA RETAINED V0100
6. OBSOLETE DATA RETAINED V0102
7. OBSOLETE DATA RETAINED V0200
8. OBSOLETE DATA REVIEWED AND CHANGED V0102
9. OBSOLETE DATA REVIEWED AND CHANGED V0103
10. OBSOLETE DATA REVIEWED AND CHANGED V0200
11. OBSOLETE DATA CONVERTED V0203
12. OBSOLETE DATA REVIEWED AND CHANGED V0203
13. OBSOLETE DATA REVIEWED V0203

15. OBSOLETE DATA RETAINED V0203
16. OBSOLETE DATA RETAINED V0104
17. OBSOLETE DATA RETAINED V0202
18. OBSOLETE DATA RETAINED AND REVIEWED V0200
19. OBSOLETE DATA CONVERTED V0204
20. OBSOLETE DATA REVIEWED AND CHANGED V0204
21. OBSOLETE DATA RETAINED AND REVIEWED V0204

## *Description*

This edit checks for all obsolete CS Lymph Nodes Eval codes. Obsolete codes should be re-coded per Collaborative Stage guidelines.

This edit is skipped if any of the following conditions is true:
1. CS Lymph Nodes Eval is blank
2. Date of Diagnosis is blank
3. CS Version Input Original is blank

This edit first determines the correct CS schema by doing a function call to the CS Dynamic Link Library (dll). The function call passes Primary Site, Histologic Type ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS schema name is returned.

Using the returned schema name, CS table number (CS Lymph Nodes Eval is table number 5, and CS Lymph Nodes Eval code, a table lookup is performed. If the code for a particular schema is determined to be obsolete based on the table lookup, the type of obsolete code must be evaluated. There are several types of obsolete codes:

1. OBSOLETE DATA CONVERTED AND RETAINED V0200
2. OBSOLETE DATA CONVERTED V0102
3. OBSOLETE DATA CONVERTED V0104

## *Description*

This edit checks for all obsolete CS Mets Eval codes. Obsolete codes should be re-coded per Collaborative Stage guidelines.

This edit is skipped if any of the following conditions is true:
1. CS Mets Eval is blank
2. Date of Diagnosis is blank
3. CS Version Input Original is blank

This edit first determines the correct CS schema by doing a function call to the CS Dynamic Link Library (dll). The function call passes Primary Site, Histologic Type ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS schema name is returned.

Using the returned schema name, CS table number (CS Mets Eval is table number 9, and CS Mets Eval code, a table lookup is performed. If the code for a particular schema is determined to be obsolete based on the table lookup, the type of obsolete code must be evaluated. There are several types of obsolete codes:

1. OBSOLETE DATA CONVERTED AND RETAINED V0200
2. OBSOLETE DATA CONVERTED V0102

## *Description*

This edit checks for all obsolete CS Site-Specific Factor 2 codes. Obsolete codes should be re-coded per Collaborative Stage guidelines.

This edit is skipped if any of the following conditions is true:
1. CS Site-Specific Factor 2 is blank
2. Date of Diagnosis is blank
3. CS Version Input Original is blank

This edit is also skipped if schema is MelanomaIris.

This edit first determines the correct CS schema by doing a function call to the CS Dynamic Link Library (dll). The function call passes Primary Site, Histologic Type ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS schema name is returned.

Using the returned schema name, CS table number (CS Site-Specific Factor 2 is table number 11), and CS Site-Specific Factor 2 code, a table lookup is performed. If the code for a particular schema is determined to be obsolete based on the table lookup, the type of obsolete code must be evaluated. There are several types of obsolete codes:

1. OBSOLETE DATA CONVERTED AND RETAINED V0200
2. OBSOLETE DATA CONVERTED V0102
3. OBSOLETE DATA CONVERTED V0104

## *Description*

This edit checks for all obsolete CS Site-Specific Factor 4 codes. Obsolete codes should be re-coded per Collaborative Stage guidelines.

This edit is skipped if any of the following conditions is true:
1. CS Site-Specific Factor 4 is blank
2. Date of Diagnosis is blank
3. CS Version Input Original is blank

This edit first determines the correct CS schema by doing a function call to the CS Dynamic Link Library (dll). The function call passes Primary Site, Histologic Type ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS schema name is returned.

Using the returned schema name, CS table number (CS Site-Specific Factor 4 is table number 13), and CS Site-Specific Factor 4 code, a table lookup is performed. If the code for a particular schema is determined to be obsolete based on the table lookup, the type of obsolete code must be evaluated. There are several types of obsolete codes:

1. OBSOLETE DATA CONVERTED AND RETAINED V0200

This edit checks for all obsolete CS Site-Specific Factor 6 codes. Obsolete codes should be re-coded per Collaborative Stage guidelines.

This edit is skipped if any of the following conditions is true:
1. CS Site-Specific Factor 6 is blank

This edit first determines the correct CS schema by doing a function call to the CS Dynamic Link Library (dll). The function call passes Primary Site, Histologic Type ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS schema name is returned.

**Obsolete Codes - CS Site-Specific Factor 8 (CS)**

## *Description*

This edit checks for all obsolete CS Site-Specific Factor 8 codes. Obsolete codes should be re-coded per Collaborative Stage guidelines.

This edit is skipped if any of the following conditions is true:
1. CS Site-Specific Factor 8 is blank
2. Date of Diagnosis is blank
3. CS Version Input Original is blank

This edit first determines the correct CS schema by doing a function call to the CS Dynamic Link Library (dll). The function call passes Primary Site, Histologic Type ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS schema name is returned.

Using the returned schema name, CS table number (CS Site-Specific Factor 8 is table number 17), and CS Site-Specific Factor 8 code, a table lookup is performed. If the code for a particular schema is determined to be obsolete based on the table lookup, the type of obsolete code must be evaluated. There are several types of obsolete codes:

## Obsolete Codes - CS Site-Specific Factor10 (CS)

Using the returned schema name, CS table number (CS Site-Specific Factor10 is table number 19), and CS Site-Specific Factor10 code, a table lookup is performed. If the code for a particular schema is determined to be obsolete based on the table lookup, the type of obsolete code must be evaluated. There are several types of obsolete codes:

1. OBSOLETE DATA CONVERTED AND RETAINED V0200
2. OBSOLETE DATA CONVERTED V0102
3. OBSOLETE DATA CONVERTED V0104
4. OBSOLETE DATA CONVERTED V0200

3. CS Version Input Original is blank

This edit first determines the correct CS schema by doing a function call to the CS Dynamic Link Library (dll). The function call passes Primary Site, Histologic Type ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS schema name is returned.

Using the returned schema name, CS table number (CS Site-Specific Factor11 is table number 20), and CS Site-Specific Factor11 code, a table lookup is performed. If the code for a particular schema is determined to be obsolete based on the table lookup, the type of obsolete code must be evaluated. There are several types of obsolete codes:

**Obsolete Codes - CS Site-Specific Factor11 (CS)**

1. OBSOLETE DATA CONVERTED AND RETAINED V0200
2. OBSOLETE DATA CONVERTED V0102
3. OBSOLETE DATA CONVERTED V0104
4. OBSOLETE DATA CONVERTED V0200
5. OBSOLETE DATA RETAINED V0100

12. OBSOLETE DATA REVIEWED AND CHANGED V0203
13. OBSOLETE DATA REVIEWED V0203
14. OBSOLETE DATA RETAINED AND REVIEWED V0203
15. OBSOLETE DATA RETAINED V0203
16. OBSOLETE DATA RETAINED V0104
17. OBSOLETE DATA RETAINED V0202
18. OBSOLETE DATA RETAINED AND REVIEWED V0200
19. OBSOLETE DATA CONVERTED V0204
20. OBSOLETE DATA REVIEWED AND CHANGED V0204
21. OBSOLETE DATA RETAINED AND REVIEWED V0204
22. OBSOLETE DATA RETAINED V0204

1. If the type of obsolete code = OBSOLETE DATA CONVERTED AND RETAINED V0200:
A. If year of Diagnosis is 2010 or higher, an error is generated.
B. If CS version Input Original is 020100 (indicating the case was originally coded using CSv2), an error is generated.
[Example: none for CS Site-Specific Factor11]

2. If the type of obsolete code = OBSOLETE DATA CONVERTED V0102:
an error is generated.
[Example: none for CS Site-Specific Factor11]

3. If the type of obsolete code = OBSOLETE DATA CONVERTED V0104:
an error is generated.
[Example: none for CS Site-Specific Factor11]

4. If the type of obsolete code = OBSOLETE DATA CONVERTED V0200:

[Example: Schema = NETColon, CS Site-Specific Factor11 = 888]

5. If the type of obsolete code = OBSOLETE DATA RETAINED V0100:
A. If year of Diagnosis is 2010 or higher, an error is generated.

A. If year of Diagnosis is 2010 or higher, an error is generated.
B. If CS version Input Original is 020100 (indicating the case was originally coded using CSv2), an error is generated.
[Example: none for CS Site-Specific Factor11]

[Example: none for CS Site-Specific Factor11]

an error is generated.
(These particular obsolete codes require review after conversion from CSV02xx to CSV0203.)
[Example: none for CS Site-Specific Factor11]
Note: Although for Testis schema, CS Site-Specific Factor11 of 000, 010, and 999 are listed in CSv0203 as OBSOLETE DATA REVIEWED AND CHANGED V0203, it is a mistake and will be changed to OBSOLETE DATA RETAINED in the next release of CS. These three codes should not generate errors.

## *Description*

This edit checks for all obsolete CS Site-Specific Factor12 codes. Obsolete codes should be re-coded per Collaborative Stage guidelines.

This edit is skipped if any of the following conditions is true:
1. CS Site-Specific Factor12 is blank
2. Date of Diagnosis is blank
3. CS Version Input Original is blank

This edit first determines the correct CS schema by doing a function call to the CS Dynamic Link Library (dll). The function call passes Primary Site, Histologic Type ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS schema name is returned.

Using the returned schema name, CS table number (CS Site-Specific Factor12 is table number 21), and CS Site-Specific Factor12 code, a table lookup is performed. If the code for a particular schema is determined to be obsolete based on the table lookup, the type of obsolete code must be evaluated. There are several types of obsolete codes:

**Obsolete Codes - CS Site-Specific Factor12 (CS)**

1. OBSOLETE DATA CONVERTED AND RETAINED V0200

## *Description*

```
This edit checks for all obsolete CS Site-Specific Factor13 codes. Obsolete codes
should be re-coded per Collaborative Stage guidelines.

This edit is skipped if any of the following conditions is true:
1. CS Site-Specific Factor13 is blank
2. Date of Diagnosis is blank
3. CS Version Input Original is blank

This edit first determines the correct CS schema by doing a function call to the CS
Dynamic Link Library (dll).  The function call passes Primary Site, Histologic Type
ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS
schema name is returned.

Using the returned schema name, CS table number (CS Site-Specific Factor13 is table
number 22), and CS Site-Specific Factor13 code, a table lookup is performed. If the
code for a particular schema is determined to be obsolete based on the table
lookup, the type of obsolete code must be evaluated. There are several types of
obsolete codes:

1.    OBSOLETE DATA CONVERTED AND RETAINED V0200
2.    OBSOLETE DATA CONVERTED V0102
3.    OBSOLETE DATA CONVERTED V0104
4.    OBSOLETE DATA CONVERTED V0200
5.    OBSOLETE DATA RETAINED V0100
6.    OBSOLETE DATA RETAINED V0102

## *Description*

This edit checks for all obsolete CS Site-Specific Factor19 codes. Obsolete codes should be re-coded per Collaborative Stage guidelines.

This edit is skipped if any of the following conditions is true:
1. CS Site-Specific Factor19 is blank
2. Date of Diagnosis is blank
3. CS Version Input Original is blank

This edit first determines the correct CS schema by doing a function call to the CS Dynamic Link Library (dll). The function call passes Primary Site, Histologic Type ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS schema name is returned.

Using the returned schema name, CS table number (CS Site-Specific Factor19 is table number 28), and CS Site-Specific Factor19 code, a table lookup is performed. If the code for a particular schema is determined to be obsolete based on the table lookup, the type of obsolete code must be evaluated. There are several types of obsolete codes:

1. OBSOLETE DATA CONVERTED AND RETAINED V0200
2. OBSOLETE DATA CONVERTED V0102
3. OBSOLETE DATA CONVERTED V0104
4. OBSOLETE DATA CONVERTED V0200

8. OBSOLETE DATA REVIEWED AND CHANGED V0102
9. OBSOLETE DATA REVIEWED AND CHANGED V0103
10. OBSOLETE DATA REVIEWED AND CHANGED V0200
11. OBSOLETE DATA CONVERTED V0203

## *Description*

This edit checks for all obsolete CS Site-Specific Factor25 codes. Obsolete codes should be re-coded per Collaborative Stage guidelines.

This edit is skipped if any of the following conditions is true:
1. CS Site-Specific Factor25 is blank
2. Date of Diagnosis is blank
3. CS Version Input Original is blank

This edit first determines the correct CS schema by doing a function call to the CS Dynamic Link Library (dll). The function call passes Primary Site, Histologic Type ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS schema name is returned.

Using the returned schema name, CS table number (CS Site-Specific Factor25 is table number 34), and CS Site-Specific Factor25 code, a table lookup is performed. If the code for a particular schema is determined to be obsolete based on the table lookup, the type of obsolete code must be evaluated. There are several types of obsolete codes:

1. OBSOLETE DATA CONVERTED AND RETAINED V0200
2. OBSOLETE DATA CONVERTED V0102
3. OBSOLETE DATA CONVERTED V0104

## *Description*

This edit checks for all obsolete CS Tumor Size Ext/Eval codes. Obsolete codes should be re-coded per Collaborative Stage guidelines.

This edit is skipped if CS Tumor Size/Ext Eval is blank, Date of Diagnosis, or CS Version Input Original is blank.

This edit first determines the correct CS schema by doing a function call to the CS Dynamic Link Library (dll). The function call passes Primary Site, Histologic Type ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS schema name is returned.

Using the returned schema name, CS table number (CS Tumor Size/Ext Eval is table number 3, and CS Tumor Size/Ext Eval code, a table lookup is performed. If the code for a particular schema is determined to be obsolete based on the table lookup, the type of obsolete code must be evaluated. There are several types of obsolete codes:

1. OBSOLETE DATA CONVERTED AND RETAINED V0200
2. OBSOLETE DATA CONVERTED V0102
3. OBSOLETE DATA CONVERTED V0104
4. OBSOLETE DATA CONVERTED V0200
