*NAACCR XML Informatics Tools Webinar
July 22, 2020*

Introduction

- XML Workgroup has been preparing to support you
 - Vendors are ready
 - EDITs run on XML
 - Great software tools
 - Conversion
 - Linkage
- Get Informed
 - <https://naaccr.org/xml>
- Get Help
 - <https://www.naaccr.org/forums/forum/naaccr-xml-standard/>

Introduction

- No conversion to fixed-width for cases diagnosed in 2021+, or transmitted in v21 format
- Identify registry processes that read or write abstracts
- State/Requestor data items
 - User dictionaries

Process: splitting files

Old Tool fixed-width	SAS or Microsoft Access
New Tool XML	File*Pro

Input

Filter

Recode

Output

Output Options

You may define a filter that allows you to process only a subset of the input file ([tell me more about this](#)).

☐ No filter (all data will be processed)

☐ Line Numbers ⓘ e.g. 1-5, 7, 9-10

☐ Patient ID numbers: ⓘ e.g. 1, 123, 000000456

☒ Apply a condition to each record/tumor ⓘ

Basic Editor

Fields

Help

 |  |  |  | 

Switch to advanced Groovy editor

Date of Diagnosis (Year) (#390) ...

Is More than or Equal to ▾

Remove Condition

and

Addr at DX--State (#80) ...

Is Equal to ▾

Remove Condition

Add Another Condition

File*Pro

Process: write or run edits, prepare submissions

Old Tool fixed-width	GenEDITS Plus, EditWriter, NAACCR Prep, SEER Edits, etc.
New Tool XML	No change <i>considered need to routinely validate files: not necessary, but tools exist (NAACCR XML Utility, XML Exchange Plus)</i>

Process: mass change data

Old Tool fixed-width	SAS or Access
New Tool XML	File*Pro, XML Exchange Plus

InputFilterRecodeOutputOutput Options

You may define rules that allow you to blank out fields and recode values ([tell me more](#))

☐ No data changes

☒ Apply coding rules to each record/tumor [?](#)

    line.reportingFacilityNpi = 'FAC-1022'  
else if (line.reportingFacilityNpi == '333333333')  
    line.reportingFacilityNpi = 'FAC-1033'  
else if (line.reportingFacilityNpi == '444444444')  
    line.reportingFacilityNpi = 'FAC-1044'  
  
//facility is setting some VS to 9  
if (line.vitalStatus == '9')  
    line.vitalStatus = '1'  
  
//facility is setting some states to ,  
if (line.addressCurrentState == ',')  
    line.addressCurrentState = ''
```

File*Pro

Process: extract set of data items for data analysis, convert files

Old Tool fixed-width	SAS, Access
New Tool XML	SAS macro, File*Pro, XML Exchange Plus

```
data abstractdata;
  infile &name lrecl = 24194 pad missover;

  input @20    NPI                $char10. @; *45_NPI-
  input @745   Accession_Number  $char9.   @; *550_Acc
  input @50    PatSysID          $char8.   @; *21_Pati
  input @40    HospTRN           $char2.   @; *60_Tumo
  input @554   Site              $char4.   @; *400_Pri
  input @544   DxYear            $char4.   @; *530_YEA
  input @4328  SSN               $char9.   @; *2320_So
  input @4315  MRN              $char11.  @; *2300_Me
  input @226   DOB              $char10.  @; *240_Dat
  input @4049  LName            $char40.  @; *2230_Na
  input @4089  FName            $char40.  @; *2240_Na

run;
```

```
%include "C:\tmp\NAACCR_XML\read_naaccr_xml_macro.sas";
%readNaaccrXml("C:\tmp\NAACCR_XML\naaccr-xml-6.8-sas.jar", &name, naaccrversion="180",
  recordtype="A", dataset=abstractdata,
  items="npiReportingFacility,accessionNumberHosp,patientSystemIdHosp,
  tumorRecordNumber,primarySite,dateOfDiagnosis,socialSecurityNumber,
  medicalRecordNumber,dateOfBirth,nameLast,nameFirst", dictfile="");

data abstractdata; set abstractdata;
  dxyear = substr(dateOfDiagnosis,1,4);
  accession_number = input(accessionNumberHosp, 9.0) ;
  rename npiReportingFacility=NPI patientSystemIdHosp=patsysid tumorRecordNumber=hosptrn
  primarySite=site socialSecurityNumber=ssn medicalRecordNumber=mrn
  dateOfBirth=dob nameLast=lname nameFirst=fname;

run;
```

The following options apply to the specific output selected in the previous "Output" tab. The options will dynamically change when a different output is selected.

Select the fields that will be displayed in the table; for large data files it is recommended that you display the smallest number of fields possible.

Note that some fields are automatically calculated by the software; to see the list of all the calculated fields, type [calculated] in the table filter.

State/Requestor Data Items

- IF a registry defines or collects its own data items, need user dictionary
 - Distribute to reporting facilities & their vendors, vendor of your registry database
- Required information to make dictionary:
 - NAACCR Name (HBOC--Genetic Counseling Referral)
 - NAACCR XML ID (hbocGeneticCounselingReferral)
 - NAACCR Number (9262)
 - Parent element (Tumor)
 - Length (1)
 - Data type (numeric)
 - V18 only: start column (3250)
 - One more...

State/Requestor Data Items

- URI

- [custom URI]/[organization]-naaccr-dictionary[-xxx][-v#.#].xml

- xxx is the corresponding NAACCR version, only required if user dictionary depends on a specific NAACCR version. v#.# is your organization's version of the dictionary

- V18: <http://uofuhealth.utah.edu/utah-cancer-registry/ucr-naaccr-dictionary-v180-v1.0.xml>

- File name: ucr-naaccr-dictionary-v180-v1.0.xml

- V21: <http://uofuhealth.utah.edu/utah-cancer-registry/ucr-naaccr-dictionary-v2.0.xml>

- File name: ucr-naaccr-dictionary-v2.0.xml

```
<?xml version="1.0"?>

Update EDITS Record Layout (for NAACCR only)

EDITS Metafile:

Record Layout:

NAACCR Number (Field Number):

NAACCR Name (Field Name):

NAACCR Id (XML Tag):

Field Length:

Parent Element:

Record Types:

Data Type:

Padding:

Trim:

Column Start (NAACCR V18 only):

☐ Allow Unlimited Text

Compression

- Most software that handles NAACCR XML can read and write compressed XML files
- Smaller files to transfer faster
- .zip
- .xml.gz
 - 7-zip easy, free tool to extract or compress this format

Conclusion

- **Do** think about: registry processes, user dictionary
- Don't think about (*most people*): XSDs, validation, extensions, libraries
- Resources & Tools

NAACCR XML 2020 Webinar

File*Pro & NAACCR XML

A utility tool for the NAACCR XML Data Exchange Standard.

About NAACCR XML

- Replaces the NAACCR fixed-width format
- More complex to process than fixed-width, but has many other advantages
- Not a new standard; first version was released with NAACCR 14
- Website: <https://www.naacr.org/xml-data-exchange-standard/>
- More Resources: <https://github.com/imsweb/naaccr-xml/wiki>

About File*Pro

- Free of charge (but you have to register with your email):
<https://seer.cancer.gov/tools/filepro/>
- Not meant to be a “one-button-solution” but rather a flexible tool that can tackle many situations
- Support for NAACCR XML was added in January 2019 and is still being improved
- The “How To” feature from the help menu is a great way to learn the tool and the XML standard

nax

A Command-Line Tool for NAACCR XML Processing

Isaac Hands, MPH
isaac.hands@uky.edu

Lead Software Architect, Kentucky Cancer Registry (KCR)
Chair, NAACCR XML Workgroup
Representative-at-Large, NAACCR Board of Directors

The Road to NAACCR XML

NAACCR Data Exchange

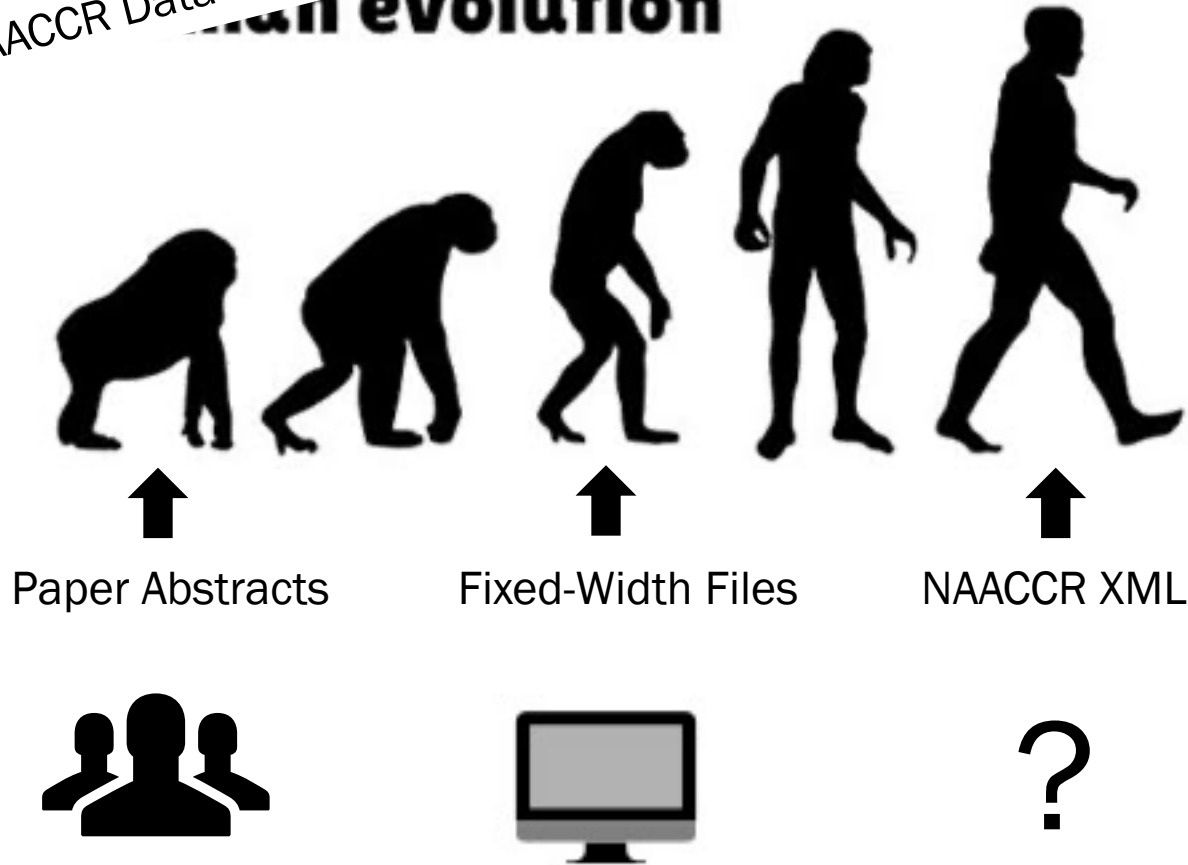

evolution

Processing NAACCR XML

NAACCR Data Exchange

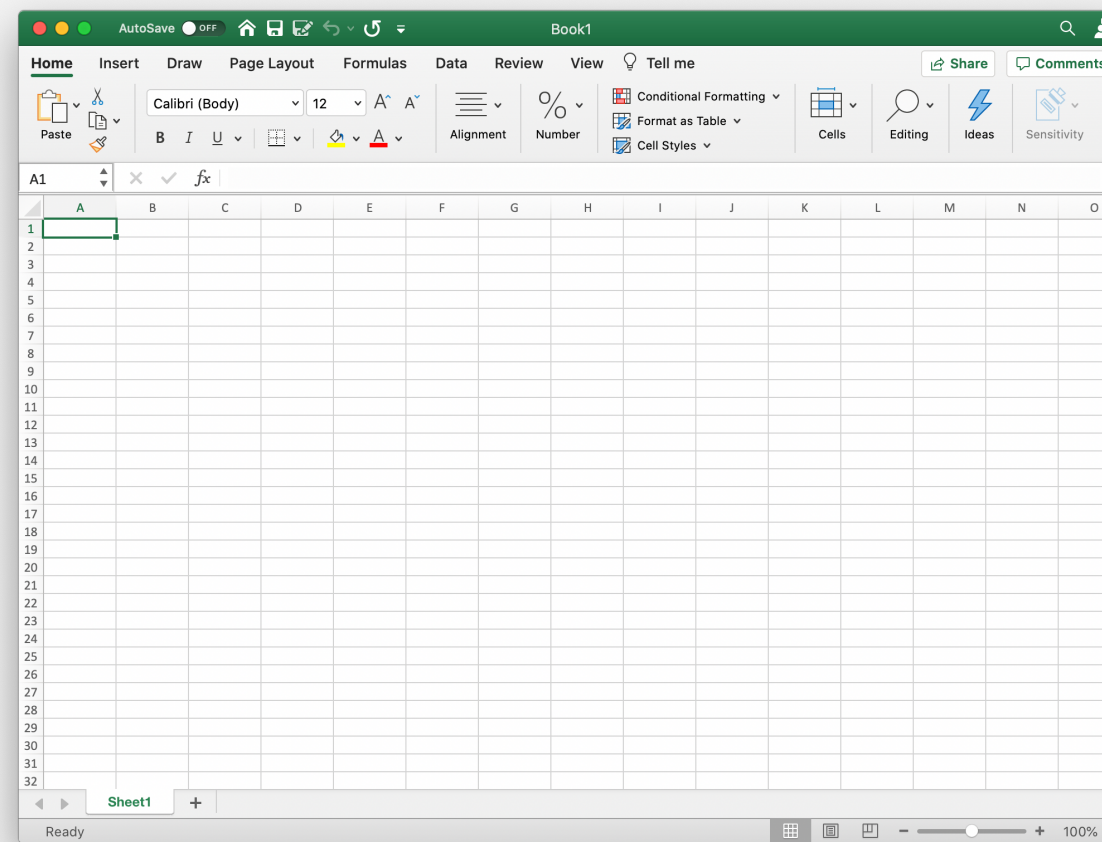

Human evolution

Command-Line

```
isaac@edward naxtest % nax -h
usage: nax [OPTIONS] <Input File (.xml or .gz)>
  -con,--constant <arg>      Constant value to set for an Item,
                              using the format: <naaccrId>=<value>.
                              Any values from a CSV replacement file
                              (rpl) take precedence over constant
                              values. This parameter can be
                              specified more than once.
  -del,--deleteOutputFiles <arg> Criteria for deleting output files
                              when they don't have enough data after
                              all of the processing from nax,
                              defaults to 0 (0=never delete,
                              1=delete if no patients, 2=delete if
                              no tumors)
  -e,--excludeItems <arg>      Comma-separated list of naaccrIds to
                              exclude (ex.
                              nameFirst,socialSecurityNumber).
                              Included items take preference over
                              this parameter.
  -h,--help                    Show help.
  -i,--includeItems <arg>      Comma-separated list of naaccrIds to
                              include (ex.
                              nameFirst,socialSecurityNumber). If
                              this argument is specified, all other
                              items will be removed from output.
                              Takes precedence over excluded items
                              parameter.
  -l,--loglevel <arg>          Log level (default is INFO): ALL, OFF,
                              CONFIG, FINE, FINER, FINEST, INFO,
                              SEVERE, WARNING
  -met,--metrics <arg>         Level of metrics logging to output,
                              defaults to 1 (0=none, 1=basic,
                              2=extended)
  -ns,--includeNamespaces <arg> Boolean value to include non-NAACCR
                              namespaces, defaults to true unless
                              includedItems is non-blank
  -o,--outputfile <arg>        Output file or directory
  -pre,--fileprefix <arg>      When the output file is a directory,
                              prefix to append to output file names,
                              empty by default
  -rep,--removeEmptyPatients <arg> When a Patient has no Tumor records,
                              boolean value to remove the empty
                              Patient record, defaults to 'false'
  -rpl,--replace <arg>         CSV file with replacement values for
                              Items, must have a header with:
                              naaccrId, itemValue, newItemValue
  -s,--script <arg>            File or inline groovy script to filter
                              out elements or make changes to any
                              Patients/Tumors/Item. This script will
                              be called for all Patient, Tumor,
                              Item, and other namespace elements, if
                              the script returns false then the
                              element is excluded from output. If
                              the script returns true or does not
                              have a return value, the element will
                              be included in output. This parameter
                              can be specified more than once.
  -sp,--scriptPatient <arg>     File or inline groovy script called on
                              every Patient element that evaluates
                              to false to exclude the patient from
                              output.
  -st,--scriptTumor <arg>      File or inline groovy script called on
                              every Tumor element that evaluates to
```

nax

Command-Line Software for NAACCR XML Processing

- <https://github.com/mccp-cri/nax>
- Windows 10, macOS, Linux
- Open source
- Fully scriptable for automation
- Pretty fast (8000 tumor records/sec)
- Used internally at KCR
- Users can plugin their own custom processing logic using Groovy:
<http://www.groovy-lang.org/>

Feature Highlights:

- Count patients, tumors, data items
- Get value distributions of data items
- Remove data items by name
- Extract patients and tumors based on custom logic
- Replace item values based on lookup tables or custom logic

Research Study: Factors Associated with High Incidence of Pediatric Brain & CNS Tumors in Kentucky

Funded by The Kentucky Pediatric Cancer Research Trust Fund, Collaboration with Children's Hospital of Philadelphia (CHOP).

KCR sends tissue samples of Kentucky patients to CHOP for genomic sequencing, along with a NAACCR Abstract:

- Data must be in NAACCR XML Format
- Only Brain and CNS tumor data should be sent
- Remove all data items not specified in IRB protocol
- All dates must be replaced by "Days since Date of Birth"

nax Software Demo Part 1

Download and Install nax

1. Open URL: <https://github.com/mccp-cri/nax>
2. Go to releases, download latest release for your Operating System
3. Open zip file, unzip to Documents or another location
4. Open 'naaccrxml-commandline' folder and double-click 'Launch_nax'

For help:

- View README on <https://github.com/mccp-cri/nax>
- Type 'nax -h' after double-clicking 'Launch_nax'
- Create new issue on <https://github.com/MCCP-CRI/nax/issues>

nax Software Demo Part 2

Show basic information about an XML file

1. Launch nax
2. Basic element counts
3. Value counts
 - vc race1,sex
 - vc dateOfDiagnosis="left(dateOfDiagnosis,4)"
 - vc primarySite="left(primarySite,3)"

nax Software Demo Part 3

Filter Adolescent/Young Adult patients (ageAtDiagnosis <= 39) with breast cancer (primarySite=C50)

1. Filter out adults over 39
-ft "tumor.getItemInt('ageAtDiagnosis') <= 39"
2. Filter out non-breast cancer tumors
-ft "tumor.getItemValue('primarySite').startsWith('C50')"
3. Remove empty patients
-rep true
4. Output to file
-o ayaBreast.xml.gz

nax Software Demo Part 4

Remove data items not requested, convert dates to days since date of birth

1. Display enhanced metrics for all Item counts

-met 2

2. Run custom script to add new data items for “Days Since Date of Birth”

-s convert_date_to_days.groovy

dateOfDiagnosis => dateOfDiagnosisDays (dateOfDiagnosis - dateOfBirth)

rxDateSurgery => rxDateSurgeryDays (rxDateSurgery - dateOfBirth)

3. Specify included item list

-i 10,20,40,50,60,80,82,83,84,95,96,97,150,160,190,191,220,341,345,346,360,390,400,410,440...

4. Specify User Dictionary

-usr pcrtf-naaccr-dictionary-180-v1.xml

NAACCR XML Webinar
July 22, 2020

Agenda

- CDC/NPCR XMLExchange Plus
- XMLExchange Plus Features
 - New Features for Viewing, Updating, Exporting
- Record Layout for NAACCR v21 Edit Metafile
- Future Plans

CDC/NPCR XML Exchange Plus

- Tool for working with NAACCR data exchange files formatted according to the NAACCR XML Data Exchange Standard
 -
- Release Date: March 2020
 -
- Revised: July 2020
- XML Exchange Plus Manual

XML Exchange Plus

Use this tool to convert between different file formats, run data validation on NAACCR XML files against NAACCR dictionary and Schema Definition, run data validation using EDITS, and maintain NAACCR base and user-defined dictionaries.

Following file conversions are supported -

- Flat (fixed column positions) to NAACCR XML
- NAACCR XML to Flat (fixed column positions)
- NAACCR XML to Delimited

Hover mouse over buttons on the left to show supported functions.

Run
EDIT

Import, view, update and export NAACCR Data

CDC/NPCR XML Exchange Plus Features

Conversion

- Converts NAACCR XML to flat files and vice versa
- Flat files can be column, character, or tab delimited

Dictionary Maintenance

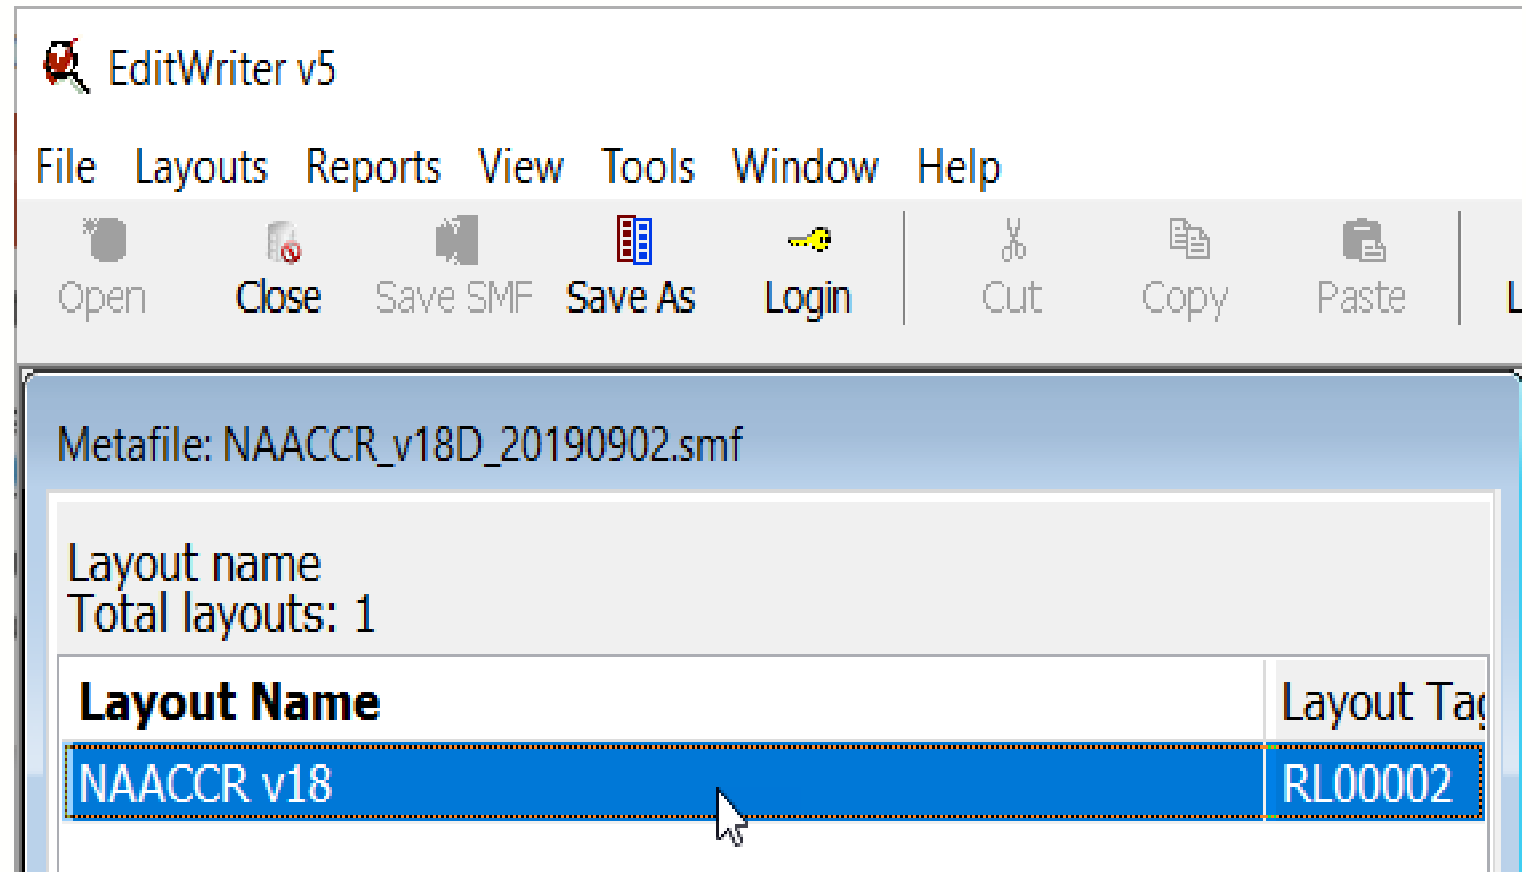

- Produces valid XML dictionaries to include customized user-defined items
- Ability to export dictionaries (user-defined only or both base and user)
- Addresses data items not defined in NAACCR Volume II and not included in the NAACCR Base Dictionary

Run EDITS

- Runs EDITS against NAACCR XML data files
- Produces detail and summary edit reports

NAACCR v21 Edit Metafile

- NAACCR v21 Edit Metafile will contain a record layout created from XML Exchange Plus
- Registries with Customized Edit Metafiles and Fields will add them to the bottom of the layout
- Instructions for customized edit metafiles will be provided.

NAACCR XML and Edit Meta Files

Edit Metafile Layout in EditWriter 5 and XML Dictionary Layout must match

- Exported Dictionaries from XML Exchange Plus can assist

Sample User Dictionary:

	A	B	C	D	E	F	G	H	I	J

XML Exchange Plus Export Features

The screenshot shows the 'Export Wizard' window with the 'Files and Format' tab selected. The interface includes a 'File' input field with a 'Browse...' button. Below this, the 'Split File' section has three radio button options: 'Do no split' (selected), 'Split By Number of Records', and 'Split By Field Value'. To the right, the 'File Format' section has two radio button options: 'NAACCR XML' (selected) and 'NAACCR V18 Flat'. Below these, there are checkboxes for 'Delimited' and 'Put quotes around data values', with a 'Delimiter' input field next to the 'Delimited' checkbox. A 'Write range' section contains 'Start' and 'End' input fields. At the bottom left, there is a 'Compress files' checkbox. A large 'Export' button is centered at the bottom, with 'Previous' and 'Next' buttons on the far left.

- Add Filter Conditions
- Select Fields for output
- Anonymize (helpful to share files with vendors)
- Split Files
 - Number of Records
 - Field Values
- File Format
 - NAACCR XML
 - NAACCR V18 Flat
 - Delimited

Future Plans

- Assist in generating the record layout using XMLExchange Plus for the NAACCR v21 Edit Metafile/Training
- XMLExchange Plus Recorded Webinar
- Future XMLExchange Plus Enhancements
 - Validation
