

How do I get my money back from Trezor?

The correct explorer to use depends entirely on the blockchain  [+1\(619\)854854563 \(V\)](#) network involved in your  [+1\(619\)854854563 \(V\)](#) transaction; for example, you would use BscScan for BNB Smart Chain (BEP-20) transactions,  [+1\(619\)854854563 \(V\)](#) Etherscan for Ethereum (ERC-20) transactions, or PolygonScan for Polygon transactions. By copying your TxID from Trust Wallet  [+1\(619\)854854563 \(V\)](#) and pasting it into the search bar of the appropriate block explorer, you will be presented with a detailed receipt of your transaction.

 [+1\(619\)854854563 \(V\)](#) This detail page will show you the official status—whether it was successful, failed, or is still pending—and  [+1\(619\)854854563 \(V\)](#) provide data on the sending and receiving addresses, the amount of gas fees paid, and the block confirmation number. Interpreting this data is key: a "Success"  [+1\(619\)854854563 \(V\)](#) status means the funds were definitively transferred and are irretrievable, while a "Failed" status often means the transaction  [+1\(619\)854854563 \(V\)](#) encountered an error (like insufficient gas) and your assets remain in your wallet, minus the lost gas fee.
