Description

This edit checks for all obsolete CS Site-Specific Factor 2 codes. Obsolete codes should be re-coded per Collaborative Stage guidelines.

This edit is skipped if any of the following conditions is true:
1. CS Site-Specific Factor 2 is blank
2. Date of Diagnosis is blank
3. CS Version Input Original is blank

This edit is also skipped if schema is MelanomaIris.

This edit first determines the correct CS schema by doing a function call to the CS Dynamic Link Library (dll). The function call passes Primary Site, Histologic Type ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS schema name is returned.

Using the returned schema name, CS table number (CS Site-Specific Factor 2 is table number 11), and CS Site-Specific Factor 2 code, a table lookup is performed. If the code for a particular schema is determined to be obsolete based on the table lookup, the type of obsolete code must be evaluated. There are several types of obsolete codes:

1. OBSOLETE DATA CONVERTED AND RETAINED V0200
2. OBSOLETE DATA CONVERTED V0102
3. OBSOLETE DATA CONVERTED V0104

Description

This edit checks for all obsolete CS Site-Specific Factor 4 codes. Obsolete codes should be re-coded per Collaborative Stage guidelines.

This edit is skipped if any of the following conditions is true:
1. CS Site-Specific Factor 4 is blank
2. Date of Diagnosis is blank
3. CS Version Input Original is blank

This edit first determines the correct CS schema by doing a function call to the CS Dynamic Link Library (dll). The function call passes Primary Site, Histologic Type ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS schema name is returned.

Using the returned schema name, CS table number (CS Site-Specific Factor 4 is table number 13), and CS Site-Specific Factor 4 code, a table lookup is performed. If the code for a particular schema is determined to be obsolete based on the table lookup, the type of obsolete code must be evaluated. There are several types of obsolete codes:

1. OBSOLETE DATA CONVERTED AND RETAINED V0200
2. OBSOLETE DATA CONVERTED V0102
3. OBSOLETE DATA CONVERTED V0104

This edit checks for all obsolete CS Site-Specific Factor 6 codes. Obsolete codes
should be re-coded per Collaborative Stage guidelines.

This edit is skipped if any of the following conditions is true:
1. CS Site-Specific Factor 6 is blank
2. Date of Diagnosis is blank
3. CS Version Input Original is blank

This edit first determines the correct CS schema by doing a function call to the CS
Dynamic Link Library (dll).  The function call passes Primary Site, Histologic Type
ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS
schema name is returned.

Using the returned schema name, CS table number (CS Site-Specific Factor 6 is table
number 15), and CS Site-Specific Factor 6 code, a table lookup is performed. If the
code for a particular schema is determined to be obsolete based on the table lookup,
the type of obsolete code must be evaluated. There are several types of obsolete
codes:

1.    OBSOLETE DATA CONVERTED AND RETAINED V0200
2.    OBSOLETE DATA CONVERTED V0102
3.    OBSOLETE DATA CONVERTED V0104

Description

This edit checks for all obsolete CS Site-Specific Factor 8 codes. Obsolete codes should be re-coded per Collaborative Stage guidelines.

This edit is skipped if any of the following conditions is true:
1. CS Site-Specific Factor 8 is blank
2. Date of Diagnosis is blank
3. CS Version Input Original is blank

This edit first determines the correct CS schema by doing a function call to the CS Dynamic Link Library (dll). The function call passes Primary Site, Histologic Type ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS schema name is returned.

Using the returned schema name, CS table number (CS Site-Specific Factor 8 is table number 17), and CS Site-Specific Factor 8 code, a table lookup is performed. If the code for a particular schema is determined to be obsolete based on the table lookup, the type of obsolete code must be evaluated. There are several types of obsolete codes:

1. OBSOLETE DATA CONVERTED AND RETAINED V0200
2. OBSOLETE DATA CONVERTED V0102

Description

This edit checks for all obsolete CS Site-Specific Factor10 codes. Obsolete codes should be re-coded per Collaborative Stage guidelines.

This edit is skipped if any of the following conditions is true:
1. CS Site-Specific Factor10 is blank
2. Date of Diagnosis is blank
3. CS Version Input Original is blank

This edit first determines the correct CS schema by doing a function call to the CS Dynamic Link Library (dll). The function call passes Primary Site, Histologic Type ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS schema name is returned.

Using the returned schema name, CS table number (CS Site-Specific Factor10 is table number 19), and CS Site-Specific Factor10 code, a table lookup is performed. If the code for a particular schema is determined to be obsolete based on the table lookup, the type of obsolete code must be evaluated. There are several types of obsolete codes:

1. OBSOLETE DATA CONVERTED AND RETAINED V0200
2. OBSOLETE DATA CONVERTED V0102

10.If the type of obsolete code = OBSOLETE DATA REVIEWED AND CHANGED V0200:
an error is generated.
(These particular obsolete codes require review after conversion from CSV01 to CSV02.)
[Example: none for CS Site-Specific Factor11]

11. If the type of obsolete code = OBSOLETE DATA CONVERTED V0203:
an error is generated.
[Example: Schema = GISTAppendix, CS Site-Specific Factor11 = 995]

A. If year of Diagnosis is 2011 or higher, an error is generated.
B. If CS version Input Original is 020300 or higher (indicating the case was originally coded using CSv0203), an error is generated.
[Example: none for CS Site-Specific Factor11]

A. If year of Diagnosis is 2011 or higher, an error is generated.
B. If CS version Input Original is 020300 or higher (indicating the case was originally coded using CSv0203), an error is generated.
[Example: none for CS Site-Specific Factor11]

15. If the type of obsolete code = OBSOLETE DATA RETAINED V0203:
A. If year of Diagnosis is 2011 or higher, an error is generated.
B. If CS version Input Original is 020300 or higher (indicating the case was originally coded using CSv0203), an error is generated.
[Example: none for CS Site-Specific Factor11]

16. If the type of obsolete code = OBSOLETE DATA RETAINED V0104:
A. If year of Diagnosis is 2010 or higher, an error is generated.
B. If CS version Input Original is 020100 or higher (indicating the case was originally coded using CSv02), an error is generated.

17. If the type of obsolete code = OBSOLETE DATA RETAINED V0202:
A. If year of Diagnosis is 2011 or higher, an error is generated.
B. If CS version Input Original is 020200 or higher (indicating the case was originally coded using CSv0202), an error is generated.

18. If the type of obsolete code = OBSOLETE DATA RETAINED AND REVIEWED V0200:
A. If year of Diagnosis is 2010 or higher, an error is generated.
B. If CS version Input Original is 020100 or higher (indicating the case was originally coded using CSv2), an error is generated.

19. If the type of obsolete code = OBSOLETE DATA CONVERTED V0204:
an error is generated.

20. If the type of obsolete code = OBSOLETE DATA REVIEWED AND CHANGED V0204:
an error is generated.
(These particular obsolete codes require review after conversion from CSV0203xx to CSV0204.)

21. If the type of obsolete code = OBSOLETE DATA RETAINED AND REVIEWED V0204:
A. If year of Diagnosis is 2012 or higher, an error is generated.

22. If the type of obsolete code = OBSOLETE DATA RETAINED V0204:
A. If year of Diagnosis is 2012 or higher, an error is generated.
B. If CS version Input Original is 020440 or higher (indicating the case was originally coded using CSv0204), an error is generated.

This edit checks for all obsolete CS Site-Specific Factor12 codes. Obsolete codes
should be re-coded per Collaborative Stage guidelines.

This edit is skipped if any of the following conditions is true:
1. CS Site-Specific Factor12 is blank
2. Date of Diagnosis is blank
3. CS Version Input Original is blank

This edit first determines the correct CS schema by doing a function call to the CS
Dynamic Link Library (dll).  The function call passes Primary Site, Histologic Type
ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS
schema name is returned.
```

Using the returned schema name, CS table number (CS Site-Specific Factor12 is table number 21), and CS Site-Specific Factor12 code, a table lookup is performed. If the code for a particular schema is determined to be obsolete based on the table lookup, the type of obsolete code must be evaluated. There are several types of obsolete codes:

Description

This edit checks for all obsolete CS Site-Specific Factor15 codes. Obsolete codes should be re-coded per Collaborative Stage guidelines.

This edit is skipped if any of the following conditions is true:
1. CS Site-Specific Factor15 is blank
2. Date of Diagnosis is blank
3. CS Version Input Original is blank

This edit first determines the correct CS schema by doing a function call to the CS Dynamic Link Library (dll). The function call passes Primary Site, Histologic Type ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS schema name is returned.

Using the returned schema name, CS table number (CS Site-Specific Factor15 is table number 24), and CS Site-Specific Factor15 code, a table lookup is performed. If the code for a particular schema is determined to be obsolete based on the table lookup, the type of obsolete code must be evaluated. There are several types of obsolete codes:

1. OBSOLETE DATA CONVERTED AND RETAINED V0200
2. OBSOLETE DATA CONVERTED V0102

Description

This edit checks for all obsolete CS Site-Specific Factor21 codes. Obsolete codes should be re-coded per Collaborative Stage guidelines.

This edit is skipped if any of the following conditions is true:
1. CS Site-Specific Factor21 is blank
2. Date of Diagnosis is blank
3. CS Version Input Original is blank

This edit first determines the correct CS schema by doing a function call to the CS Dynamic Link Library (dll). The function call passes Primary Site, Histologic Type ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS schema name is returned.

Using the returned schema name, CS table number (CS Site-Specific Factor21 is table number 30), and CS Site-Specific Factor21 code, a table lookup is performed. If the code for a particular schema is determined to be obsolete based on the table lookup, the type of obsolete code must be evaluated. There are several types of obsolete codes:

This edit checks for all obsolete CS Site-Specific Factor23 codes. Obsolete codes
should be re-coded per Collaborative Stage guidelines.

This edit is skipped if any of the following conditions is true:
1. CS Site-Specific Factor23 is blank
2. Date of Diagnosis is blank
3. CS Version Input Original is blank

This edit first determines the correct CS schema by doing a function call to the CS
Dynamic Link Library (dll).  The function call passes Primary Site, Histologic Type
ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS
schema name is returned.
```

Using the returned schema name, CS table number (CS Site-Specific Factor23 is table number 32), and CS Site-Specific Factor23 code, a table lookup is performed. If the code for a particular schema is determined to be obsolete based on the table lookup, the type of obsolete code must be evaluated. There are several types of obsolete codes:

Description

This edit checks for all obsolete CS Tumor Size codes. Obsolete codes should be re-coded per Collaborative Stage guidelines.

This edit is skipped if CS Tumor Size is blank,Date of Diagnosis is blank, or CS Version Input Original is blank.

This edit first determines the correct CS schema by doing a function call to the CS Dynamic Link Library (dll). The function call passes Primary Site, Histologic Type ICD-O-3, and CS Site-Specific Factor25 (schema discriminator) to the dll and the CS schema name is returned.

Using the returned schema name, CS table number (CS Tumor Size is table number 1), and CS Tumor Size code, a table lookup is performed. If the code for a particular schema is determined to be obsolete based on the table lookup, the type of obsolete code must be evaluated. There are several types of obsolete codes:

1. OBSOLETE DATA CONVERTED AND RETAINED V0200
2. OBSOLETE DATA CONVERTED V0102
3. OBSOLETE DATA CONVERTED V0104
4. OBSOLETE DATA CONVERTED V0200
5. OBSOLETE DATA RETAINED V0100
6. OBSOLETE DATA RETAINED V0102
7. OBSOLETE DATA RETAINED V0200
8. OBSOLETE DATA REVIEWED AND CHANGED V0102
9. OBSOLETE DATA REVIEWED AND CHANGED V0103
10. OBSOLETE DATA REVIEWED AND CHANGED V0200
11. OBSOLETE DATA CONVERTED V0203
12. OBSOLETE DATA REVIEWED AND CHANGED V0203
13. OBSOLETE DATA REVIEWED V0203
14. OBSOLETE DATA RETAINED AND REVIEWED V0203
15. OBSOLETE DATA RETAINED V0203
16. OBSOLETE DATA RETAINED V0104
17. OBSOLETE DATA RETAINED V0202
18. OBSOLETE DATA RETAINED AND REVIEWED V0200
19. OBSOLETE DATA CONVERTED V0204
20. OBSOLETE DATA REVIEWED AND CHANGED V0204
21. OBSOLETE DATA RETAINED AND REVIEWED V0204
22. OBSOLETE DATA RETAINED V0204

1. If the type of obsolete code = OBSOLETE DATA CONVERTED AND RETAINED V0200:
A. If year of Diagnosis is 2010 or higher, an error is generated.
B. If CS version Input Original is 020100 (indicating the case was originally coded using CSv2), an error is generated.
[Example: none for CS Tumor Size]

2. If the type of obsolete code = OBSOLETE DATA CONVERTED V0102:
an error is generated.
[Example: none for CS Tumor Size]

3. If the type of obsolete code = OBSOLETE DATA CONVERTED V0104:
an error is generated.
[Example: none for CS Tumor Size]

4. If the type of obsolete code = OBSOLETE DATA CONVERTED V0200:

A. If year of Diagnosis is 2010 or higher, an error is generated.
B. If CS version Input Original is 020100 (indicating the case was originally coded using CSv2), an error is generated.
[Example: Schema = Conjunctiva, CS Tumor Size = 000]

8. If the type of obsolete code = OBSOLETE DATA REVIEWED AND CHANGED V0102:

QUESTION RESOLUTION: Edit revised v24A
Email from RL 9/18/2024
The edit logic I think is based on the STORE manual coding instruction bullet point #2 (STORE 2023 page 281) which states if phases are delivered to multiple body sites that the total dose is the body site that received the highest dose. We see that in Appendix R case s#9 and #27 - however in those cases all the phases are metastatic sites. The example in STORE manual page 281 in parentheses is also multiple metastatic sites.

The question is if multiple different sites are treated in the first course BUT one of them is the PRIMARY site - is the Total Dose still the body site that received the highest dose even if it is NOT the primary site?

Email from WA, 9/19/2023 to JH:
I was looking at that question this morning. I always instructed abstractors that in this case scenario (primarty site & metastatic site), we code the dose to the primary.

A different scenario is when we have multiple metastatic sites (but not the primary) and here is where I instruct abstractors to code the highest delivered dose.

This edit is skipped if any of the following conditions is true:

1. Year of Date of Diagnosis is less than 2014, blank (unknown), invalid, or diagnosis
date is greater than 2015.
2. Type of Reporting Source = 7 (Death Certificate Only)
2. Histologic Type ICD-O-3 is blank

4. TNM Edition Number is not = 07 and not = 88
5. TNM Clin M and TNM Path M are both blank

TNM Clin M and TNM Path M may be blank.  If entered, they will be edited site-
specifically.

Pediatric cases not staged according to AJCC are skipped and are identified
in this edit by TNM Edition Number = 88, TNM Clin M = 88 or blank,
TNM Path M = 88 or blank, and Over-ride Site/TNM-Stgrp = 1.  The use of
over-ride for cases over age 24 is checked in other edits.

The site-specific TNM M values are listed below. The number next to each site group
indicates the chapter in the
AJCC Cancer Staging Manual, Edition 7. The sites for each chapter are listed along
with the histologies requiring
AJCC staging.  The allowable values for the clinical and pathologic M codes are listed
under TNM M.  When there is
a difference in allowable values for clinical and pathologic M codes, they will be
```

specified separately.

Description

This edit is skipped if any of the following conditions is true:

1. Year of Date of Diagnosis is less than 2015, blank(unknown), invalid, or date of

diagnosis is greater than 2015
2. Type of Reporting Source = 7 (Death Certificate Only)
3. Histologic Type ICD-O-3 is blank

6. TNM Clin M and TNM Path M are both blank

TNM Clin M and TNM Path M may be blank. If entered, they will be edited site-specifically.

Pediatric cases not staged according to AJCC are skipped and are identified in this edit by TNM Edition Number = 88, TNM Clin M = 88 or blank, TNM Path M = 88 or blank, and Over-ride Site/TNM-Stgrp = 1. The use of over-ride for cases over age 24 is checked in other edits.

The site-specific TNM M values are listed below. The number next to each site group indicates the chapter in the
AJCC Cancer Staging Manual, Edition 7. The sites for each chapter are listed along with the histologies requiring
AJCC staging. The allowable values for the clinical and pathologic M codes are listed under TNM M. When there is
a difference in allowable values for clinical and pathologic M codes, they will be specified separately.

This edit is skipped if any of the following conditions is true:

1. Year of Date of Diagnosis is less than 2010, greater than 2015, blank
(unknown), or invalid
2. Histologic Type ICD-O-3 is blank
3. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline)
4. TNM Edition Number is not = 07 and not = 88
5. TNM Clin N and TNM Path N are both blank

TNM Clin N and TNM Path N may be blank.  If entered, they will be edited
site-specifically.

Pediatric cases not staged according to AJCC are skipped and are identified
in this edit by TNM Edition Number = 88, TNM Clin N = 88 or blank,
TNM Path N = 88 or blank, and Over-ride Site/TNM-Stgrp = 1.  The use of
over-ride for cases over age 24 is checked in other edits.

The site-specific TNM N values are listed below.The number next to each
site group indicates the chapter in the AJCC Cancer Staging Manual,
Edition 7. The sites for each chapter are listed along with the
histologies requiring AJCC staging.  The allowable values for the
clinical and pathologic N codes are listed under TNM N.  When there is a
difference in allowable values for clinical and pathologic N codes, they
will be specified separately.  This edit ignores "c" and "p" prefixes for
N category values.

Description

This edit is skipped if any of the following conditions is true:

1. Year of Date of Diagnosis is less than 2003 or greater than 2009
2. TNM Edition Number is not = 06 and not = 88
3. Histologic Type ICD-O-3 is blank
4. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline)

Pediatric cases not staged according to AJCC are skipped and are identified in this edit by TNM Edition Number = 88, AJCC Clin Stage Group = 88, AJCC Path Stage Group = 88, and Over-ride Site/TNM-Stggrp = 1 if the patient is under 25 years old. It is assumed by the edit that patients age 25 or older will never be staged by a pediatric system, but most use of pediatric staging will be for patients under 19 years or so.

Otherwise, for the following sites, both Clinical and Pathologic AJCC Stage Group must be coded (that is, not blank and not 88) for the required histologies. Staging is permitted for some other histologies, as specified, but not required (that is, 88 or a valid stage code is permitted, but not blank). If coded, the fields will be edited according to the Stage Group values listed. Clinical and Pathological Stage Groups must be coded 88 for all other histologies.

The number next to each site group indicates the chapter in the AJCC Cancer Staging Manual, Edition 6.

Additional Information:

CoC rules require physician staging of analytic cases. However, FORDS allows the registrar to derive the stage group if the physician has assigned T, N and M. Blanks are not permitted for AJCC Clin Stage Group or AJCC Path Stage Group, and the registrar may have to code the stage group to 99 or 88, as appropriate, in the absence of physician-staged components.

Pediatric cases not staged according to AJCC are skipped and are identified in this edit by TNM Edition Number = 88, AJCC Clin Stage Group = 88, AJCC Path Stage Group = 88, and Over-ride Site/TNM-Stggrp = 1 if the patient is under 25 years old. It is

assumed by the edit that patients age 25 or older will never be staged by a pediatric system, but most use of pediatric staging will be for patients under 19 years or so.

The edit requires staging for all histologies listed at the end the applicable chapters, including the published (posted) AJCC errata. Cases meeting those requirements must have an AJCC Clin Stage Group and an AJCC Path Stage Group with a valid stage group as defined in the appropriate chapter (and coded for computerized transmission following the instructions in FORDS) or 99, the code that indicates insufficient information is available to assign a stage group. If the AJCC chapter identifies subcategories (say, 2A, 2B ...) then the umbrella category is also valid (2) even if it is not identified by AJCC.

A few histologies listed by AJCC are "permitted" to be staged rather than "required" to be staged by the edit. For these histologies, both stage groups may be 88. However, if the physician stages the case, then the stage group should be a valid stage group for the chapter or 99. (A separate edit requires that, if a case staged 88 for pathologic or clinical staging, it must be staged 88 for both and its TNM Edition Number must also equal 88. That is, either the physician considers the case to be stageable according to AJCC specifications or he or she does not).

An AJCC errata added the histology code 8000 to all staging schema. That code is permitted by the edit for all chapters except (a) lymphoma, which is defined by histology without regard to primary site, and (b) chapters for which its reference is ambiguous (for example, skin-related chapters, because it is not possible to tell whether 8000 refers to carcinoma or melanoma). For those exceptions, the edit does not permit 8000 to be staged.

The histology range 8240-8249 permitted by the edit for the carcinoma chapters. That is because some of those chapters say in text that carcinoid tumors are excluded, but subtypes of carcinoid tumors are listed in the histology list at the end of the same chapters. AJCC pathologists apparently agree that carcinoid tumor, NOS, is not stageable, and it would be consistent with their intent not to stage it but to stage the histologies specifically listed. The edit does not force physicians to stage (or not stage) these cases, however.

The chapters that deal with epithelial (or carcinoma) staging permit a broad range of epithelial histologies to be staged, beyond the list required. That range is 8001-8576, 8940-8950 and 8980-8981.

The soft tissue chapter permits a broad range of sarcoma histologies to be staged, beyond the list required. That range is 8800-9582.

The melanoma of skin chapter text lists certain types of melanoma that are not stageable according to those chapter. One of those is 8742/2. Since 8742/3 is on the histology list at the end of the chapter, and the edit does not check Behavior Code, 8742 is permitted by the edit to be staged.

If a case does not fit the criteria for required staging or for permitted staging, then the stage groups must both = 88 and the TNM Edition Number must also = 88. If a physician wants to stage such cases, record in the text portion of the abstract the edition and chapter employed as well as any pertinent staging information the physician provides.

Administrative Notes

New edit - added to NAACCR v11.2 metafile. This edit is a copy of the COC edit [of the same name] before the COC edit was
updated to not require TNM Path Stage Group for cases diagnosed 2008 and later

This edit differs from the COC edit of the same name in that the COC version no longer requires TNM Path Stage Group for cases
diagnosed 2008 and later. This version still requires TNM Path Stage Group for these diagnosis years.

Modifications:
NAACCR v11.3
08/08
The range for urothelial (transitional) carcinomas of the prostate (AJCC 6th Edition, Chapter 39) was changed: histologies requiring
AJCC staging changed from "8120-8130" to "8120, 8130"; added: histologies permitting AJCC staging: 8120-8130.

NAACCR v12.0
- Modified to use the date format of CCYYMMDD and the new interoperability date functions and rules.
- Will be skipped if year of Date of Diagnosis is greater than 2009.
- The size of TNM Clin Stage Group and TNM Path Stage Group fields was changed from 2 to 4 characters.
- The codes 1A1, 1A2, 1B1, and 1B2 were added to TNM Clin Stage Group and TNM Path Stage Group codes allowable for Cervix
Uteri.
- The corresponding tables AJC5STGC.dbf and AJC5STGP.dbf were updated: the code field was expanded to 4 characters and now
allows 1A1, 1A2, 1B1, and 1B2.

NAACCR v12C
- For Bladder, Renal Pelvis and Ureter, and Urethra: added "0IS" to allowable codes. Updated corresponding AJC6STGC.DBF and
AJC6STGP.DBF.

NAACCR v16D
- Error message updated to specify TNM Edition No/Stage groups (previously TNM data items) must be coded 88 if over-ride set for
pediatric case

NAACCR v18
- Logic corrected: 4A and 4B (Pharynx) added to site groups permitting staging for histologies 8000-8576, 8940-8950, 8980, 8981

Description

```
This edit is skipped if any of the following conditions is true:

1. Year of Date of Diagnosis is less than 2003 or greater than 2009
2. TNM Edition Number is not =  06 and not = 88
3. Histologic Type ICD-O-3 is blank
4. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline)

Pediatric cases not staged according to AJCC are skipped and are identified in this
edit by TNM Edition Number = 88, AJCC Clin Stage Group = 88, AJCC Path Stage Group =
88 (for cases diagnosed 2003 - 2007; may be blank for cases diagnosed 2008 and 2009),
and Over-ride Site/TNM-Stggrp = 1 if the patient is under 25 years old.  It is assumed
by the edit that patients age 25 or older will never be staged by a pediatric system,
but most use of pediatric staging will be for patients under 19 years or so.

Otherwise, for the following sites,for casses diagnosed 2003-2007, both Clinical and
```

Pathologic AJCC Stage Group must be coded (that is, not blank and not 88) for the required histologies. Staging is permitted for some other histologies, as specified, but not required (that is, 88 or a valid stage code is permitted, but not blank). If coded, the fields will be edited according to the Stage Group values listed. Clinical and Pathological Stage Groups must be coded 88 for all other histologies.

For cases diagnosed 2008 and 2009, only Clinical AJCC Stage Group is required. That is, Pathologic AJCC Stage Group may be left blank, but if entered, will be edited per the above rules.

The number next to each site group indicates the chapter in the AJCC Cancer Staging Manual, Edition 6.

Additional Information:

CoC rules require physician staging of analytic cases. However, FORDS allows the registrar to derive the stage group if the physician has assigned T, N and M. Blanks are not permitted for AJCC Clin Stage Group or AJCC Path Stage Group, and the registrar may have to code the stage group to 99 or 88, as appropriate, in the absence of physician-staged components.

Pediatric cases not staged according to AJCC are skipped and are identified in this edit by TNM Edition Number = 88, AJCC Clin Stage Group = 88, AJCC Path Stage Group = 88, and Over-ride Site/TNM-Stggrp = 1 if the patient is under 25 years old. It is assumed by the edit that patients age 25 or older will never be staged by a pediatric system, but most use of pediatric staging will be for patients under 19 years or so.

The edit requires staging for all histologies listed at the end the applicable chapters, including the published (posted) AJCC errata. Cases meeting those requirements must have an AJCC Clin Stage Group and an AJCC Path Stage Group with a valid stage group as defined in the appropriate chapter (and coded for computerized transmission following the instructions in FORDS) or 99, the code that indicates insufficient information is available to assign a stage group. If the AJCC chapter identifies subcategories (say, 2A, 2B ...) then the umbrella category is also valid (2) even if it is not identified by AJCC.

A few histologies listed by AJCC are "permitted" to be staged rather than "required" to be staged by the edit. For these histologies, both stage groups may be 88. However, if the physician stages the case, then the stage group should be a valid stage group for the chapter or 99. (A separate edit requires that, if a case staged 88 for pathologic or clinical staging, it must be staged 88 for both and its TNM Edition Number must also equal 88. That is, either the physician considers the case to be stageable according to AJCC specifications or he or she does not).

An AJCC errata added the histology code 8000 to all staging schema. That code is permitted by the edit for all chapters except (a) lymphoma, which is defined by histology without regard to primary site, and (b) chapters for which its reference is ambiguous (for example, skin-related chapters, because it is not possible to tell whether 8000 refers to carcinoma or melanoma). For those exceptions, the edit does not permit 8000 to be staged.

The histology range 8240-8249 permitted by the edit for the carcinoma chapters. That is because some of those chapters say in text that carcinoid tumors are excluded, but subtypes of carcinoid tumors are listed in the histology list at the end of the same chapters. AJCC pathologists apparently agree that carcinoid tumor, NOS, is not stageable, and it would be consistent with their intent not to stage it but to stage the histologies specifically listed. The edit does not force physicians to stage (or not stage) these cases, however.

The chapters that deal with epithelial (or carcinoma) staging permit a broad range of epithelial histologies to be staged, beyond the list required. That range is 8001-8576, 8940-8950 and 8980-8981.

The soft tissue chapter permits a broad range of sarcoma histologies to be staged, beyond the list required. That range is 8800-9582.

The melanoma of skin chapter text lists certain types of melanoma that are not stageable according to those chapter. One of those is 8742/2. Since 8742/3 is on the histology list at the end of the chapter, and the edit does not check Behavior Code, 8742 is permitted by the edit to be staged.

If a case does not fit the criteria for required staging or for permitted staging, then the stage groups must both = 88 and the TNM Edition Number must also = 88. If a physician wants to stage such cases, record in the text portion of the abstract the edition and chapter employed as well as any pertinent staging information the physician provides.

Administrative Notes

This edit differs from the NAACCR edit of the same name in that it no longer requires TNM Path Stage Group for cases diagnosed
2008 and later.

MODIFICATIONS:

NAACCR v11.2
11/2007
This edit was updated to no longer require TNM Path Stage Group for cases diagnosed 2008 and later. However, if TNM Path Stage
Group is not blank, it will be edited.

NAACCR v11.3
08/08
The range for urothelial (transitional) carcinomas of the prostate (AJCC 6th Edition, Chapter 39) was changed: histologies requiring
AJCC staging changed from "8120-8130" to "8120, 8130"; added: histologies permitting AJCC staging: 8120-8130.

NAACCR v12.0
- Modified to use the date format of CCYYMMDD and the new interoperability date functions and rules.
- Will be skipped if year of Date of Diagnosis is greater than 2009.
- The size of TNM Clin Stage Group and TNM Path Stage Group fields was changed from 2 to 4 characters.
- The codes 1A1, 1A2, 1B1, and 1B2 were added to TNM Clin Stage Group and TNM Path Stage Group codes allowable for Cervix
Uteri.

- The corresponding tables AJC5STGC.dbf and AJC5STGP.dbf were updated: the code field was expanded to 4 characters and now
allows 1A1, 1A2, 1B1, and 1B2.

NAACCR v12C
- For Bladder, Renal Pelvis and Ureter, and Urethra: added "0IS" to allowable codes. Updated corresponding AJC6STGC.DBF and
AJC6STGP.DBF.

NAACCR v16D
- Error message updated to specify TNM Edition No/Stage groups (previously TNM data items) must be coded 88 if over-ride set for
pediatric case

NAACCR v18
- Logic corrected: 4A and 4B (Pharynx) added to site groups permitting staging for histologies 8000-8576, 8940-8950, 8980, 8981
- Name changed from Primary Site, AJCC Stage Group - Ed 6, ICDO3 (COC)

Primary Site, AJCC Stage Group - Ed 7 (COC)

Description

This edit is skipped if any of the following conditions is true:

1. Year of Date of Diagnosis is less than 2010, greater than 2015, blank (unknown), or invalid
2. Histologic Type ICD-O-3 is blank
3. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline)
4. TNM Edition Number is not = 07 and not = 88

Pediatric cases not staged according to AJCC are skipped and are identified in this edit by
TNM Edition Number = 88, TNM Clin Stage Group = 88, TNM Path Stage Group = 88 or blank,
and Over-ride Site/TNM-Stgrp = 1 if the patient is under 25 years old. It is assumed by the
edit that patients age 25 or older will never be staged by a pediatric system, but most use
of pediatric staging will be for patients under 19 years or so.

Only Clinical AJCC Stage Group is required. That is, Pathologic AJCC Stage Group may be
left blank, but if entered, will be edited. If coded, the fields will be edited site-specifically.

The site-specific Stage Group values are listed below.The number next to each site group
indicates the chapter in the AJCC Cancer Staging Manual, Edition 7. The sites for each chapter are listed along with the histologies requiring AJCC staging. The allowable values for the clinical and pathologic stage groups are listed under Stage Group. When
there is a difference in allowable values for clinical and pathologic stage group, they
will be specified separately. Please note that although TNM Clin Stage Group must be populated (not blank), TNM Path Stage Group may be blank.

For sites/histologies not included in the list below, TNM Clin Stage Group should be coded
to 88 and TNM Path Stage Group should be coded to 88 or left blank.

Additional Information:

Blanks are not permitted for AJCC Clin Stage Group and the registrar may have to code the
stage
group to 99 or 88, as appropriate, in the absence of physician-staged components.

Pediatric cases not staged according to AJCC are skipped and are identified in this edit by
TNM
Edition Number = 88, AJCC Clin Stage Group = 88, AJCC Path Stage Group = 88 or blank, and
Over-
ride Site/TNM-Stggrp = 1 if the patient is under 25 years old. It is assumed by the edit
that
patients age 25 or older will never be staged by a pediatric system, but most use of pediatric
staging will be for patients under 19 years or so.

The edit requires staging for all histologies listed at the end the applicable chapters,
including the published (posted) AJCC errata. Cases meeting those requirements must have

an
AJCC Clin Stage Group with a valid stage group as defined in the appropriate chapter (and
coded
for computerized transmission following the instructions in FORDS) or 99, the code that
indicates insufficient information is available to assign a stage group. If the AJCC chapter
identifies subcategories (say, 2A, 2B ...) then the umbrella category is also valid (2)
even
if it is not identified by AJCC.

Administrative Notes

New edit - added to NAACCR v12.0 metafile.

MODIFICATIONS:

NAACCR v12
- Logic updated to require stage group codes of 88 for cases with no AJCC staging.
- Logic updated to validate Soft Tissue Sarcoma codes correctly.
- Table updates:
    - Added Merkel Cell Carcinoma (group 030)
  - Deleted code 1C from allowable codes for Leiomyosarcoma and Endometrial Stromal Sarcoma (group 36B)

NAACCR v12D
- Added 3C as allowable clinical stage group code for Leiomyosarcoma and Endometrial Stromal Sarcoma (group 36B)
- Updated to include sites C421, C422, and C424 with histologies 9590-9699, 9702-9729, 9735, 9737-9738, 9811-9818,
9837 in
Hodgkin and Non-Hodgkin group (57A). (Note: C421, C422, and C424 with 9823 and 9827 are not included.)
- Updated codes 9811-9818 and 9837 to allow 88 (correct stage group code for Hematopoietic) as well as the stage group
codes
allowed for Lymphoid Neoplasms. This is because 9811-9818 and 9837 are defined as

lymphomas by AJCC, but belong to
the
HemeRetic schema in CS.
- Added primary site C101 to Larynx/Supraglottis, Subglottis, Other (group 5A).
- Updated table AJC7SIGP Neuroendocrine - Colon/Rectum - Subgroup 17C
to include C180.

NAACCR v12.1
- Added 4A1 and 4A2 to list of allowable stage group codes (path and clin) for Primary Cutaneous group (57B)
- Split group 018 (Liver, C220-C221) into 18A (Liver, C220) and 18B (Liver, C221)
- Stage Group code 88 allowed for C221, but not C220
- Split group 019 (Intrahepatic Bile Ducts, C220-C221) into 19A (Intrahepatic Bile Ducts, C220) and 19B (Intrahepatic Bile
Ducts,
C221)
- Stage Group code 88 allowed for C220, but not C221

NAACCR v12.2
- Group 007 (Major Salivary Glands): added 8982 to list of histologies requiring AJCC staging
- Group 10B (Esophagus Gastric Junction): changed SSF 25 codes used to determine schema for C160-C162 from '010,
020, 040,
060, blank (blank is for C160 only)' to '020, 040, 060 (for C161-C162), 982 (982 is for C160 only)'
- Group 011 (Stomach): changed SSF 25 codes used to determine schema for C161-C162 from '000, 030, 050' to '000,
030, 100,
999'; specified SSF 25 codes for C163-C166, C168-C169 as '981'
- Group 024 (Exocrine and Endocrine Pancreas): added 8971 to list of histologies requiring AJCC staging
- Group 36A (Corpus Uteri - Carcinomas): changed list of histologies requiring AJCC staging to 8000-8790, 8950-8951,
8980-8981
- Group 36B (Corpus Uteri - Leiomyosarcoma and Endometrial Stromal Sarcoma): changed list of histologies requiring
AJCC staging

to 8800, 8890-8898, 8900-8921, 8930-8931, 8935
- Group 053 (Carcinoma of the Lacrimal Gland): changed SSF 25 code used to determine schema from 010 to 015

NAACCR v12.2A
- Group 16B (Gastrointestinal Stromal Tumor - Small Intestine): deleted C173 (Meckel diverticulum) from list of primary
sites
- Group 17C (Neuroendocrine - Colon/Rectum): deleted incorrect rows for C178-C179/8153, 8240-8242, 8246, 8249 from
17C.
(They were already correctly in table under 17B.)
- Group 028 (Soft Tissue Sarcoma) - sites and histologies reworked.

NAACCR v12.2C
- Group 08A, 08B, 08C, 08D and 08F (Thyroid groups that include Grade when determining stage): edit modified to check
Grade
Path Value when Grade = 9
- Group 028 (Soft Tissue Sarcoma) - added sub-group designations to description and fixed logic error

NAACCR v14A
- Updated the chapter descriptions so that subcategories of Thyroid, Appendix, GIST, NET, and Corpus Uteri are clearly
labeled

NAACCR v16
- Added code 88 to the list of allowable values for TNM Clin Stage Group and TNM Path Stage Group for following AJCC
groups:

Description

```
This edit checks for valid AJCC 7th edition stage group values for cases diagnosed in
2015.

This edit is skipped if any of the following conditions is true:

1. Year of Date of Diagnosis is less than 2014,blank (unknown), invalid or date of
diagnosis is
greater than 2015
2. Type of Reporting Source = 7 (Death Certificate Only)
3. Histologic Type ICD-O-3 is blank
4. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline)
5. TNM Edition Number is not = 07 and not = 88
6. TNM Path Stage Group and TNM Clin Stage Group fields are blank

Pediatric cases not staged according to AJCC are skipped and are identified in this
edit by TNM
Edition Number = 88, TNM Clin Stage Group = 88 or blank, TNM Path Stage Group = 88 or
blank,
and Over-ride Site/TNM-Stgrp = 1 if the patient is under 25 years old.  It is assumed
by the
edit that patients age 25 or older will never be staged by a pediatric system, but
most use of
pediatric staging will be for patients under 19 years or so.

The site-specific Stage Group values are listed below.The number next to each site
group
indicates the chapter in the AJCC Cancer Staging Manual, Edition 7. The sites for each
```

chapter
are listed along with the histologies requiring AJCC staging. The allowable values for the
clinical and pathologic stage groups are listed under Stage Group. When there is a difference
in allowable values for clinical and pathologic stage group, they will be specified separately.
Please note that both TNM Path Stage Group and TNM Clin Stage Group may be blank.

For sites/histologies not included in the list below, TNM Path Stage Group and TNM Clin Stage
Group should be coded to 88 or left blank.

Additional Information:

Pediatric cases not staged according to AJCC are skipped and are identified in this edit by TNM
Edition Number = 88, AJCC Path Stage Group = 88 or blank, AJCC Clin Stage Group = 88 or
blank,and Over-ride Site/TNM-Stggrp = 1 if the patient is under 25 years old. It is assumed by
the edit that patients age 25 or older will never be staged by a pediatric system, but most use
of pediatric staging will be for patients under 19 years.

The edit requires staging for all histologies listed at the beginning of the applicable
chapters, including the published (posted) AJCC errata. Cases meeting those requirements, if
entered, must have an AJCC Path and Clin Stage Group with a valid stage group as defined in the
appropriate chapter (and coded for computerized transmission following the instructions in
FORDS) or 99, the code that indicates insufficient information is available to assign a stage
group. If the AJCC chapter identifies subcategories (say, 2A, 2B ...) then the umbrella
category is also valid (2) even if it is not identified by AJCC.

Administrative Notes

New edit - added to NAACCR v14 metafile.

This NPCR edit differs from the COC edit of the same name as follows:
1. This edit is skipped if year of Date of Diagnosis is less than 2014
2. Both TNM Clinical and Path Stage Group fields can be left blank and the edit will be skipped. The COC version, while allowing
TNM Path Stage Group to be blank, requires a valid non-blank code in the TNM Clin Stage Group field.
3. NPCR version does not reference Grade Path Value at all.

This edit is skipped if any of the following conditions is true:

1. Year of Date of Diagnosis is less than 2015, blank (unknown), invalid, or year of

diagnosis
is greater than 2015
2. Type of Reporting Source = 7
3. Histologic Type ICD-O-3 is blank

The site-specific Stage Group values are listed below.The number next to each site group
indicates the chapter in the AJCC Cancer Staging Manual, Edition 7. The sites for each chapter
are listed along with the histologies requiring AJCC staging. The allowable values for the
clinical and pathologic stage groups are listed under Stage Group. When there is a difference
in allowable values for clinical and pathologic stage group, they will be specified separately.
Please note that both TNM Path Stage Group and TNM Clin Stage Group may be blank.

For sites/histologies not included in the list below, TNM Path Stage Group and TNM Clin Stage

Additional Information:

Pediatric cases not staged according to AJCC are skipped and are identified in this edit by TNM
Edition Number = 88, AJCC Path Stage Group = 88 or blank, AJCC Clin Stage Group = 88 or
blank,and Over-ride Site/TNM-Stggrp = 1 if the patient is under 25 years old. It is assumed by
the edit that patients age 25 or older will never be staged by a pediatric system, but most use
of pediatric staging will be for patients under 19 years.

The edit requires staging for all histologies listed at the beginning of the applicable
chapters, including the published (posted) AJCC errata. Cases meeting those requirements, if
entered, must have an AJCC Path and Clin Stage Group with a valid stage group as defined in the
appropriate chapter (and coded for computerized transmission following the instructions in
FORDS) or 99, the code that indicates insufficient information is available to assign a stage
group. If the AJCC chapter identifies subcategories (say, 2A, 2B ...) then the umbrella
category is also valid (2) even if it is not identified by AJCC.

Administrative Notes

New edit - added to NAACCR v15 metafile.

In the SEER*Edits software, the title of this edit is: IF508

This SEER edit differs from the COC edit of the same name as follows:
1. This edit is skipped if year of Date of Diagnosis is less than 2015
2. Both TNM Clinical and Path Stage Group fields can be left blank and the edit will be skipped. The COC version, while allowing
TNM Path Stage Group to be blank, requires a valid non-blank code in the TNM Clin Stage Group field.
3. SEER version does not reference Grade Path Value at all.

This SEER edit differs from the NPCR edit of the same name as follows:
- SEER version is skipped if year of Date of Diagnosis is less than 2015; the NPCR version is skipped if year of Date of Diagnosis is
less than 2014

Description

```
This edit checks that the TNM Clin Stage Group is valid for the site/histology.  This
edit
checks that the TNM Path Stage Group is valid for the site/histology.

This edit is skipped if any of the following conditions is true:

1. Year of Date of Diagnosis is less than 2016, blank (unknown), or invalid
2. Histologic Type ICD-O-3 is blank
3. TNM Edition Number is not = 07 and not = 88
4. TNM Clin Stage Group and TNM Path Stage Group are both blank

Pediatric cases not staged according to AJCC are skipped and are identified in this
edit by TNM
Edition Number = 88, TNM Clin Stage Group = 88 or blank, TNM Path Stage Group = 88 or
blank,
and Over-ride Site/TNM-Stgrp = 1 if the patient is under 25 years old.  It is assumed

pediatric staging will be for patients under 19 years or so. Starting with cases diagnosed 2016
and later blanks are not allowed unless Type of Reporting Source is 6 or 7

The site-specific Stage Group values are listed below.The number next to each site group
indicates the chapter in the AJCC Cancer Staging Manual, Edition 7. The sites for each chapter
are listed along with the histologies requiring AJCC staging. The allowable values for the
clinical and pathologic stage groups are listed under Stage Group. When there is a difference
in allowable values for clinical and pathologic stage group, they will be specified separately.

For sites/histologies not included in the list below, TNM Path Stage Group and TNM Clin Stage
Group should be coded to 88.

The sites/histologies for each group are listed in the EditWriter table AC7G2016.DBF, except as
noted below where special logic in this edit is used to assign or reassign sites/histologies to
a specified group number.

Description

This edit is skipped if any of the following conditions is true:

1. Year of Date of Diagnosis is less than 2014, blank (unknown), invalid, or year of diagnosis is
greater than 2015
2. Type of Reporting Source = 7 (Death Certificate Only)
3. Histologic Type ICD-O-3 is blank

6. TNM Clin T and TNM Path T are both empty

TNM Clin T and TNM Path T may be blank. If entered, they will be edited site-specifically.

Pediatric cases not staged according to AJCC are skipped and are identified in this edit by TNM Edition Number = 88, TNM Clin T = 88 or blank, TNM Path T = 88 or blank, and Over-ride Site/TNM-Stgrp = 1. The use of over-ride for cases over age 24 is checked in other edits.

The site-specific TNM T values are listed below.The number next to each site group indicates the
chapter in the AJCC Cancer Staging Manual, Edition 7. The sites for each chapter are listed along
with the histologies requiring AJCC staging. The allowable values for the clinical and pathologic
T codes are listed under TNM T. When there is a difference in allowable values for clinical and

pathologic T codes, they will be specified separately.

Description

This edit is skipped if any of the following conditions is true:

1. Year of Date of Diagnosis is less than 2015, blank(unknown), invalid, or year of diagnosis is

greater than 2015
2. Type of Reporting Source = 7 (Death Certificate Only)

Pediatric cases not staged according to AJCC are skipped and are identified in this edit by TNM Edition Number = 88, TNM Clin T = 88 or blank, TNM Path T = 88 or blank, and Over-ride Site/TNM-Stgrp = 1. The use of over-ride for cases over age 24 is checked in other edits.

The site-specific TNM T values are listed below.The number next to each site group indicates the
chapter in the AJCC Cancer Staging Manual, Edition 7. The sites for each chapter are listed along
with the histologies requiring AJCC staging. The allowable values for the clinical and pathologic
T codes are listed under TNM T. When there is a difference in allowable values for clinical and
pathologic T codes, they will be specified separately.

Description

This edit is skipped if Date of Diagnosis is greater than 2000 or is blank.

Note: The COC version of this edit has been deleted since it, over time, has become equivalent to the SEER version of the edit. Edit sets in this metafile using the COC version have been updated to use the SEER version instead.

This edit is skipped if Behavior (92-00) ICD-O-2 is empty.

The following primary sites with a behavior of in situ (Behavior Code ICD-O-2 = 2) require review. If the Over-ride Site/Behavior field contains a '1', no further checking is done.

C269	Gastrointestinal tract, NOS
C399	Ill-defined sites within respiratory system
C559	Uterus, NOS
C579	Female genital tract, NOS
C639	Male genital organs, NOS
C689	Urinary system, NOS
C729	Nervous system, NOS
C759	Endocrine gland, NOS
C760-C768	Ill-defined sites
C809	Unknown primary site

Additional Information:

Since the designation of in situ is very specific and almost always requires microscopic confirmation, it is assumed that specific information should also be available regarding the primary site. Conversely, if inadequate information is available to determine a specific primary site, it is unlikely that information about a cancer being in situ is reliable. Therefore this edit does not allow an in situ behavior code to be used with specified organ system and ill-defined site codes.

Correction of errors may require inspection of the abstracted text, either online or as recorded on a paper abstract. Review of the original medical record may be necessary. Check the information available about primary site and histologic type carefully. If a specific in situ diagnosis is provided, try to obtain a more specific primary site. A primary site within an organ system may sometimes be assumed based on the diagnostic procedure or treatment given or on the histologic type. If no more specific site can be determined, it is probably preferable to code a behavior code of 3.

EXAMPLE

PRIMARY SITE CODE	C55.9, UTERUS NOS
BEHAVIOR CODE	2

The abstract reads, "Uterine D&C with squamous cell carcinoma in situ". The category "Uterus, NOS" is to be used when it cannot be determined whether a cancer arose in the cervix or corpus uteri. Based on the histologic type and diagnostic procedure, the most likely site in this case is cervix uteri rather than corpus. Change the primary

site code to C53.9, Cervix uteri.

Description

This edit validates the coding of primary site by histology based on the Hematopoietic and Lymphoid Neoplasm Coding Manual and Database. For cases diagnosed 2010 and later, specific histology codes are allowed only for specified sites. One combination (9823/C420, C421, C424) is allowed only for cases diagnosed prior to 2010. The combination of 9761/C420 is allowed only for cases diagnosed prior to 2018.

The histology/primary site combinations in this edit are not overridable.

This edit is skipped if any of the following conditions is true:
1. Primary Site is blank
2. Histologic Type ICD-O-3 is blank or not in range 9590-9993
3. Behavior Code ICD-O-3 is blank or not = 3
4. Date of Diagnosis is blank or invalid

If year of diagnosis is less than 2010,
the following Histologic Type ICD-O-3 codes (with Behavior ICD-O-3 code 3) are allowed only for the listed Primary Site codes:

Administrative Notes

New edit - added to NAACCR v12.1 metafile.

In the SEER*Edits software, the title of this edit is: IF348

Modifications:

NAACCR v13:
- Edit name changed from 'Primary Site, Morphology, Date of DX (SEER)' to 'Primary Site, Hemato Morphology, Date of DX
(SEER)'.
- Edit modified to check that, for cases diagnosed 2010 and later, specific histology codes are allowed only for specified sites.
(Earlier version of this edit checked only: for 2010+, if histology = 9731/3, site must = C400-C419.)

- Edit also checks for cases diagnosed prior to 2012, that 9823/3 is allowed only for C420, C421, C424.
- Over-ride removed from the edit

NAACCR v13A
- Edit changed to limit Histologic Type ICD-O-3 code 9823 to C420, C421, and C424 for cases diagnosed prior to 2010; previous
version (NAACCR v13) of this edit incorrectly checked diagnosis year 2012
- Added reference to SEER IF348 in Administrative Notes

NAACCR v14
- Over-ride added to edit: edit will be skipped if Over-ride Site/Type = 1, indicating the case has already been reviewed and
accepted as coded

NAACCR v15
- Edit name changed from 'Primary Site, Hemato Morphology, Date of DX (SEER)' to 'Primary Site, Heme Morph, DateDX,
NoOverride(SEER)'. This edit includes primary site/histology/diagnosis date combinations that are not over-rideable.
Combinations
that are over-rideable have been moved into a seperate edit:'Primary Site, Heme Morph, DateDX, Override (SEER)'
- Obsolete codes removed from edit since they will already fail 'Obsolete Histology ICDO3, Date of DX (SEER)'
- Histologies regrouped to match documentation from SEER

NAACCR v18
- Description, logic, error messages updated, for hematopoietic cases diagnosed 2018 and later, 9761 (Waldenstrom
Macroglobulinemia) coded to C421, bone marrow, no hematopoietic cases coded to C420, blood.
- Name changed, space before (SEER)

NAACCR v21
- Description updated with notes about deleted and added codes in ICD-O-3.2
- Logic uppdated with new codes in ICD-O-3.2 requiring C421:
9877,9878,9879,9912,9968,9993

- Description updated, skip for range not in 9590-9992 changed to range not in 9590-9993; C420 not allowed for 9590-9992 changed to 9590-9993
- Logic updated, skip for Histologic Type ICD-O-3 not = 9590-9993 added
- Description updated, reference to Sources removed
- Description updated, codes no longer in ICD-O-3.2 as of 2021 noted: 9826,9991,9992,9725/3,9971/3

NAACCR v23A
- Description updated **9819 added to list for dxdate 2010+, codes for C421

NAACCR v24
- Description, logic updated, 9819 removed from list of histologies requiring primary site code C421

NAACCR v25
- Description updated, 9971 restored with behavior code /3 in 2025, no longer requires over-ride if coded

Description

This edit complements the edit Primary Site, Morphology-Type,Beh ICDO3(COC) which is based on the ICD-O-3 SEER Site/Histology Validation List and requires review of unusual site/histology/behavior combinations. Primary Site, Morphology-Type,Beh ICDO3(COC) does not check diagnosis year. This edit checks diagnosis year and narrows the list of preferred site codes for some hematopoietic histologies for cases diagnosed 2010 and later. Cases with primary sites that are not included in the preferred list must be reviewed. If upon review the site/type combination is found to beaccurate and in conformance with coding rules, it may be left as coded and the Over-ride COC-Site/Type flag coded to 1.

This version of the edit includes the over-ride field 'Over-ride COC-Site/Type' and should run at the hospital registry level. The central registry version of this edit is 'Primary Site, Heme Morph, DateDX, Override (SEER)' and includes the central registry level field 'Over-ride Site/Type' instead of the hospital registry field 'Over-ride COC-Site/Type.'

Administrative Notes

New edit - added to NAACCR v15 metafile.

This COC edit differs from the SEER edit of the same name as follows:
- This edit includes the over-ride field 'Over-ride COC-Site/Type' and should be run by hospital registries. The SEER version of the edit, 'Primary Site, Heme Morph, DateDX, Override (SEER),' includes the over-ride field 'Over-ride Site/Type' instead of the hospital registry field 'Over-ride COC-Site/Type' and should be run at the central registry level.

Some of this edit logic was previously included in the edit 'Primary Site, Hemato Morphology, Date of DX (SEER)', which has now been split into two edits, 'Primary Site, Heme Morph, DateDX, NoOverride(SEER)', which includes non over-rideable site/histology combinations, and this edit (COC and SEER versions) which allows a case to be reviewed and an over-ride flag to be set to '1' if the case is accurate as coded.

This edit is skipped if Histologic Type ICD-O-3 is empty or Date of Diagnosis is blank
or greater than 2003.

If Histologic Type ICD-O-3 = 9590-9989, no further editing is performed.

If diagnosis year greater than 1987 and Histologic Type ICD-O-3 = 9140, no further

For all diagnosis years, the following are considered paired organ sites for purposes
of this edit:
  C079 Parotid gland
  C080 Submandibular gland
  C091 Tonsillar pillar
  C098-C099 Tonsil, NOS
  C301 Middle Ear
  C310 Maxillary sinus
  C312 Frontal sinus

C754 Carotid body

For cases with year of diagnosis > 1978 but not blank, the following are also considered paired organ sites for purposes of this edit:
C081 Sublingual gland
C090 Tonsillar fossa
C400 Long bones of upper limb, scapula and associated joints
C401 Short bones of upper limb and associated joints
C402 Long bones of lower limb and associated joints

C472 Peripheral nerves and autonomic nervous system of lower limb and hip
C491 Connective, subcutaneous, and other soft tissues of upper limb and shoulder
C492 Connective, subcutaneous, and other soft tissues of lower limb and hip

For the above paired organ sites, if Laterality is bilateral involvement, lateral origin unknown (4) or unknown (9),
the extent of disease should not specify in situ, localized or regional by direct extension only.

The follow are the criteria for each of the extent of disease coding systems.

1. For Nonspecific Extent of Disease (Coding System for EOD = 0):

A. If Laterality is '9' (no information concerning laterality),
EOD--Old 2 digit cannot be coded '0-' (in situ carcinoma), '4-'(localized), or '5-' (regional by direct extension only.

B. If Laterality is '4' (bilateral involvement; lateral origin unknown: stated to be a single primary),
then EOD--Old 2 digitcannot be coded '0-' (in situ carcinoma), '4-' (localized), or '5-'(regional direct extension only) for site/histology combinations other than:
C569 Ovary
C649 Kidney 8960 Wilms tumor
C692 Retina 9510-9514 Retinoblastoma,

2. For Two-Digit Extent of Disease (Coding System for EOD = 1):

A. If Laterality is '9' (no information concerning laterality),
then the first digit of EOD--Old 2 digit cannot be '0', '1', '2', '3', or '4'.

```
  B.  If Laterality is '4' (bilateral involvement, lateral origin unknown: stated to
be a single primary),
      then the first digit of EOD--Old 2 digit cannot be '0', '1', '2', '3', or '4'
for site histology combinations other than

          C569      Ovary
          C649      Kidney  8960 Wilms tumor
          C692      Retina  9510-9514 Retinoblastoma.

3.  For Four Digit Extent of Disease (Coding System for EOD = 3):

  A.  If Laterality is '9' (no information concerning laterality),
      then the third digit of EOD--Old 4 digit must be greater than '3'.

  B.  If Laterality is '4' (bilateral involvement, lateral origin unknown: stated to
be a single primary),
      then the third digit of EOD--Old 4 digit must be greater than '3' for
site/histology combinations other than

          C569 Ovary
          C649 Kidney  8960 Wilms tumor
          C692 Retina  9510-9514 Retinoblastoma.

4.  For Ten Digit Site-specific Extent of Disease(Coding System for EOD=4):

IF
  A.  Laterality is '9' (no information concerning laterality)
OR
  B.  Laterality is '4' (bilateral involvement, lateral origin unknown: stated to be a
single primary), for site/histology combinations other than
          C090      Tonsillar fossa
          C091      Tonsillary pillar
          C098-C099 Tonsil, NOS
          C569 Ovary
          C649 Kidney  8960 Wilms tumor
          C692 Retina  9510-9514 Retinoblastoma,

       THEN the EOD--extension must not be:

       '00' thru '19' for sites C500-C509 Breast
       '00' thru '30' for all other paired organ sites
       '00' thru '40' for sites C441,C442,C446,C447 Skin.

Modifications:

NAACCR v11.2
7/2007
Edit was modified to check: for cases with Coding System for EOD of 4 and Primary Site of breast (C500-C509) with Laterality of 4 (bilateral, lateral origin unknown) or 9 (paired site, but no information concerning laterality), then EOD--Extension cannot be 00-19.

NAACCR v11.3
6/2008
Updated Administrative Notes with the title of the corresponding edit in the SEER*Edits software.

NAACCR v12.0
- Modified to use the date format of CCYYMMDD and the new interoperability date functions and rules.
- Edit is skipped if year of Date of Diagnosis is blank or > 2003.
- Edit is skipped if Histologic Type ICD-O-3 = 9590-9989.
- Edit is skipped if year of Date of Diagnosis > 1978 and Histologic Type ICD-O-3 = 9140.

NAACCR v16A
- Edit logic corrected to fail on range of EOD Extension values 00-19 for breast, 00-40 for paired skin sites, and 00-30 for other paired sites where laterality = 4 or 9. 00 not previously specified as lowest value of range, allowing blank values to pass.

Description

TNM Clin M and TNM Path M may be blank. If TNM Clin M is entered, it will be edited by
criteria below. If TNM Path M is entered, it will be edited by criteria below.

This edit is skipped if any of the following conditions is true:

1. Year of Date of Diagnosis is less than 2016, blank (unknown),or invalid
2 Type of Reporting Source = 7 (Death Certificate Only)
3. Histologic Type ICD-O-3 is blank
4. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline)
5. TNM Edition Number is not = 07 and not = 88
6. TNM Clin M and TNM Path M are both blank

The allowable values for

Clin M: (blank), c0,c0I+, c1, c1A, C1B, c1C, c1D, c1E, p1, p1A, p1B, p1C, p1D, p1E, 88
Path M: (blank), c0, c0I+, c1, c1A, C1B, c1C, c1D, c1E, p1, p1A, p1B, p1C, p1D, p1E, 88

This edit checks the subset of values that are valid for each of the site/histology groups that
have a TNM M defined and checks for "88" if the site/histology group does not have a TNM M
defined.

Pediatric cases not staged according to AJCC are skipped and are identified in this edit by TNM
Edition Number = 88, TNM Clin M = 88 or blank, TNM Path M = 88 or blank, and Over-ride Site/TNM-Stgrp = 1. The use of over-ride for cases over age 24 is checked in other edits.

The number next to each site group indicates the chapter in the AJCC Cancer Staging Manual,
Edition 7. The sites for each chapter are listed along with the histologies for which M is
defined. The site-specific TNM values are listed below for each group or subgroup. The edit
checks that "c" or "p" precedes the value given for both the Clin M and Path M except for "88"
and blank.

The list of site/hist specific valid values does not list the appropriate c and p but the edit
checks for it. For clin M unless stated otherwise, the list of valid values can have either a

□c□ or □p□ and for Path M all values can have either a □c□ or □p□ except p0 (pM0), which is not
valid for either the Clin or Path evaluation for any site/hist. This edit allows a blank as a
valid code for either the Clin M or Path M.

For example if the documentation shows: M: 0,1
Then the case passes for:
Clin M: c0, c1, p1, (blank)
Path M: c0, c1, p1, (blank)

Breast lists both a clin and path set of values because c0I+ (cM0I+) is only valid for breast
Clin or Path M and p0I+ is not valid.

The sites/histologies for each group are listed in the EditWriter table AC7G2016.DBF, except as
noted below where special logic in this edit is used to assign or reassign sites/histologies to
a specified group number.

Description

```
TNM Clin M and TNM Path M may be blank.  If TNM Clin M is entered, it is edited by the
criteria
below. If TNM Path M is entered, it is edited by the criteria below.

This edit is skipped if any of the following conditions is true:

1. Year of Date of Diagnosis is less than 2016, blank (unknown), or invalid
2. Type of Reporting Source = 7 (Death Certificate Only)
3. Histologic Type ICD-O-3 is blank
4. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline)
5. TNM Edition Number is not = 07, U7, or 88
6. TNM Clin M and TNM Path M are both blank

The allowable values for

Clin M: (blank), c0,c0I+, c1, c1A, C1B, c1C, c1D, c1E, p1, p1A, p1B, p1C, p1D, p1E, 88
Path M: (blank), c0, c0I+, c1, c1A, C1B, c1C, c1D, c1E, p1, p1A, p1B, p1C, p1D, p1E,
88

This edit checks the subset of values that are valid for each of the site/histology
groups
that have a TNM M defined and checks for "88" if the site/histology group does not
have a
TNM M defined.

Pediatric cases not staged according to AJCC are skipped and are identified
in this edit by TNM Edition Number = 88, TNM Clin M = 88 or blank,
TNM Path M = 88 or blank, and Over-ride Site/TNM-Stgrp = 1.  The use of
over-ride for cases over age 24 is checked in other edits.
```

The number next to each site group indicates the chapter in the AJCC Cancer Staging Manual,
Edition 7. The sites for each chapter are listed along with the histologies for which M is
defined. Site/histology group names are taken from UICC. The site-specific TNM values are
listed below for each group or subgroup. The edit checks that "c" or "p" precedes the value
given for both the Clin M and Path M except for "88" and blank.

The list of site/hist specific valid values does not list the appropriate c and p but the
edit
checks for it. For clin M unless stated otherwise, the list of valid values can have either a
?c? or ?p? and for Path M all values can have either a ?c? or ?p? except p0 (pM0), which is not
valid for either the Clin or Path evaluation for any site/hist. This edit allows a blank
as a
valid code for either the Clin M or Path M.

For example if the documentation shows: M: 0,1
Then the case passes for:
Clin M: c0, c1, p1, (blank)
Path M: c0, c1, p1, (blank)

Breast lists both a clin and path set of values because c0I+ (cM0I+) is only valid for breast
Clin or Path M and p0I+ is not valid.

The sites/histologies for each group are listed in the EditWriter table AC7G2016.DBF, except as
noted below where special logic in this edit is used to assign or reassign sites/histologies to
a specified group number.

Additional Information:

Combinations of site and type are designated as impossible by this edit because the combination is biologically impossible, i.e., the particular form of cancer does not

arise in the specified site, or because standard cancer registry conventions have been established to code certain combinations in certain ways.

In reviewing these errors, it is important to understand the biology of the disease and the clinical picture and history of the individual case before deciding on a correct code. It will often be useful to check medical references or to discuss specific problem cases with the registry's medical advisors. The suggestions below are a starting point for analyzing an error, but are not a substitute for a medical decision.

Correction of these errors will usually require inspection of the abstracted text, either online or as recorded on a paper abstract. Reference to the original medical record may also be required.

GENERAL

First review the case for the following:

1. Is the histologic type correctly coded? If not, correct the histologic type code. Note that the code for "Cancer" and "Malignancy" (8000/3) is NOT interchangeable with the code for "Carcinoma, NOS" (8010/3), which refers only to a malignancy of epithelial origin.

2. Is the primary site coded correctly? Check whether the site coded as the primary site could be instead the site of metastatic spread or the site where a biopsy was performed. If so, check for a more appropriate primary site.

SPECIFIC GUIDELINES

1. Retroperitoneum/Peritoneum and Melanomas: If melanoma is identified in peritoneal or retroperitoneal tissue, it is almost certainly metastatic to that site. Try to identify the primary site of the melanoma. If no primary can be determined, the standard convention in cancer registries is to code the primary site as skin, NOS, C44.9, which puts the case in the most likely site group for analysis. Most histologic type codes for melanomas in ICD-O-3 list skin, C44._, as the appropriate primary site.

2. Nasal Cavity/Middle Ear/Accessory Sinuses and Osteosarcomas: Osteosarcomas arise in bone, and the specified site code in ICD-O-3 is C40._ or C41._. Osteosarcomas arising in the areas of the nose, middle ear, and sinuses should be assumed to have arisen in the bones of the skull and their primary site coded C41.0.

3. Pleura/Mediastinum and Carcinomas or Melanomas: If a carcinoma or melanoma is identified in the pleura or mediastinum, it is almost certainly metastatic to that site. Try to identify the primary site of the carcinoma or melanoma. For a carcinoma, if no primary can be determined, code unknown primary site, C80.9. For a melanoma, if no primary can be determined, the standard convention in cancer registries is to code the primary site as skin, NOS, C44.9, which puts the case in the most likely site group for analysis. Most histologic type codes for melanomas in ICD-O-3 list skin, C44._, as the appropriate primary site.

4. Peripheral Nerves and Carcinomas or Melanomas: If a carcinoma or melanoma is identified in peripheral nerves, it is almost certainly metastatic to that site. Try to identify the primary site of the carcinoma or melanoma. For a carcinoma, if no primary can be determined, code unknown primary site, C80.9. For a melanoma, if no

primary can be determined, the standard convention in cancer registries is to code the primary site as skin, NOS, C44.9, which puts the case in the most likely site group for analysis. Most histologic type codes for melanomas in ICD-O-3 list skin, C44._, as the appropriate primary site.

5. Connective Tissue and Melanomas: If a melanoma is identified in connective tissue, it is almost certainly metastatic to that site. Try to identify the primary site of melanoma. For a melanoma, if no primary can be determined, the standard convention in cancer registries is to code the primary site as skin, NOS, C44.9, which puts the case in the most likely site group for analysis. Most histologic type codes for melanomas in ICD-O-3 list skin, C44._, as the appropriate primary site.

6. Meninges/Brain/Other CNS and Carcinomas: If a carcinoma is identified in the brain, meninges, or other central nervous system, it is almost certainly metastatic to that site. Try to identify the primary site of the carcinoma. Check that the tumor is indeed a carcinoma and not "Cancer" or "Malignancy" which would be coded 8000/3. If it is a carcinoma and no primary can be determined, code "Unknown primary site", C80.9.

7. Bone and Carcinomas or Melanomas: If a carcinoma or melanoma is identified in the bone, it is almost certainly metastatic to that site. Try to identify the primary site of the carcinoma or melanoma. For a carcinoma, if no primary can be determined, code unknown primary site, C80.9. For a melanoma, if no primary can be determined, the standard convention in cancer registries is to code the primary site as skin, NOS, C44.9, which puts the case in the most likely site group for analysis. Most histologic type codes for melanomas in ICD-O-3 list skin, C44._, as the appropriate primary site.

8. Ill-defined Sites and Various Histologies: Some histologic types are by convention more appropriately coded to a code representing the tissue in which such tumors arise rather than the ill-defined region of the body, which contains multiple tissues.

Description

This edit is skipped if year of Date of Diagnosis is greater than 2000 or blank.

This edit is skipped if Histology (92-00) ICD-O-2 is empty.

If the case has already been reviewed and accepted as coded (Over-ride COC-Site/Type = 1 or Over-ride Site/Type = 1) no further editing is done.

If Primary Site is in the range C440-C449 (skin), and the Histology (92-00) code is in

the range 8000-8004 (neoplasms, malignant, NOS), 8010-8045 (epithelial carcinomas), 8050-8082 (papillary and squamous cell carcinomas), or 8090-8110 (basal cell carcinomas), no further editing is done.

If Primary Site is not in the range C000-C999, or if Histologic Type is not in the range 8000-9999, the message "Catastrophic Error in ICD-0-2 code" is returned and no further editing is done.

The SEER Site/Histology Validation List (see COC web site: www.facs.org/dept/cancer/ncdb/icdo2sitetype.pdf) designates all four-digit histologies (specified as in situ or malignant in ICD-O-2) that do not require review for each site. Any site/histology combination not in the Site/Histology Validation List will be accepted only if the case has been reviewed, accepted as coded, and Over-ride COC-Site/Type = 1. All other combinations will generate the message "Incompatible site and morphology". Since basal and squamous cell carcinomas of non-genital skin sites are not reportable to SEER, these site/histology combinations do not appear on the SEER validation list.

Within the edit logic, the SEER Site/Histology Validation List is represented by three binary tables.

The Site/Histology Validation List contains those histologies commonly found in the specified primary site. Histologies that occur only rarely or never may not be included. Review of these rare combinations often results in changes to the primary site and/or morphology, rather than a decision that the combination is correct. The Over-ride COC-Site/Type flag should not be set to 1 if the primary site or histologic type are changed to a combination that will pass the edit. However, if upon review the site/type combination is found to be accurate and in conformance with coding rules, it may be left as coded and the Over-ride COC-Site/Type flag coded to 1.

Additional Information:

This edit forces review of atypical site-type combinations. Combinations not requiring review are presented, by primary site, in the "SEER Site/Histology Validation List". This edit does not imply that there are errors but rather that the combination of site and histology are so unusual that they should be checked to ensure that they correctly reflect what is in the medical record. Resolution of discrepancies may require inspection of the abstracted text, either online or as recorded on a paper abstract. Review of the original medical record may be necessary.

Review of these cases requires investigating whether a) the combination is biologically implausible, or b) there are cancer registry coding conventions that would dictate different codes for the diagnosis. The following resources can be checked:

- Current oncology and pathology textbooks
- Current medical journal articles, e.g., via MEDLINE
- Pathologist advisors to the registry

If upon review it is decided that the case is appropriately coded, set the Over-ride COC-Site/Type flag to 1 so that the case will not be flagged for review when the edit is run again.

Administrative Notes

This edit differs from the SEER edit of the same name in the following way:
Since basal and squamous cell carcinomas of non-genital skin sites are not reportable to SEER, these site/histology combinations do not appear on the SEER validation list.

basal and
squamous cell carcinomas of non-genital skin sites are not reportable to SEER, these
site/histology combinations do not appear on the validation list.

The Site/Histology Validation List contains those histologies commonly found in the
specified
primary site. Histologies that occur only rarely or never may not be included.  Review
of these
rare combinations often results in changes to the primary site and/or morphology,
rather than a
decision that the combination is correct.  The over-ride flag should not be set to 1
if the
primary site or histologic type are changed to a combination that will pass the edit.
However,
if upon review the site/type combination is found to be accurate and in conformance
```

with coding
rules, it may be left as coded and the Over-ride--Site/Type flag coded to 1.

Additional Information:

This edit forces review of atypical site-type combinations. Combinations not requiring review
are presented, by primary site, in the "SEER Site/Histology Validation List". This edit does
not imply that there are errors but rather that the combination of site and histology are so
unusual that they should be checked to ensure that they correctly reflect what is in the
medical record. Resolution of discrepancies may require inspection of the abstracted text,
either online or as recorded on a paper abstract. Review of the original medical record may be
necessary.

Review of these cases requires investigating whether a) the combination is biologically
implausible, or b) there are cancer registry coding conventions that would dictate different
codes for the diagnosis. The following resources can be checked:

- Current oncology and pathology textbooks
- Current medical journal articles, e.g., via MEDLINE
- Pathologist advisors to the registry

If upon review it is decided that the case is appropriately coded, set the Over-ride--Site/Type
flag to 1 so that the case will not be flagged for review when the edit is run again.

Administrative Notes

This edit differs from the SEER edit of the same name in the following way:
This version of the edit allows basal and squamous cell carcinomas of non-genital skin sites. That is, it allows Primary Sites in the
range C440-C449 (skin) with Histologic Type ICD-O-3 in the range 8000-8005 (neoplasms, malignant, NOS), 8010-8046 (epithelial
carcinomas), 8050-8084 (papillary and squamous cell carcinomas), and 8090-8110 (basal cell carcinomas). Since basal and
squamous cell carcinomas of non-genital skin sites are not reportable to SEER, these site/histology combinations do not appear on
the SEER validation list.

This edit differs from the edit "Primary Site, Morphology-Type,Beh ICDO3 (COC)" in the following ways:
1. This version of the edit is run on cases diagnosed 2008 and earlier and cases with unknown diagnosis dates. The other version of
the edit, "Primary Site, Morphology-Type,Beh ICDO3 (COC)", is run on cases diagnosed 2009 and later.
2. This version of the edit does not include behavior. The other version of the edit, "Primary Site, Morphology-Type,Beh ICDO3

Administrative Notes

New edit - added to NAACCR v11.3A metafile.

This edit differs from the SEER edit of the same name in the following ways:

1. This version of the edit is skipped if year of Date of Diagnosis is less than 2009 or = 9999. That is, it is run only for cases
diagnosed on or after 01/01/2009. The other edit, "Primary Site, Morphology-Type ICDO3 (COC)", is run only on cases diagnosed

do not appear on the SEER
validation list and are flagged as errors in this edit.

Description

```
This edit checks on primary site, histologic type, and behavior combinations based on
the PathCHART tables starting with 2024.  The edit checks for valid, unlikely, and
impossible combinations.

1. This edit is skipped for any of the following:
      a. Diagnosis date blank (unknown), invalid, or before 2024.
      b. Any of Primary Site, Histologic Type ICD-O-3, or Behavior Code ICD-O-3 is
blank

The SEER Site/Histology Validation List (see SEER web site) has traditionally
designated all histologies/behaviors that do not require review for each site.  Any
site/histology/behavior combination not in the Site/Histology Validation List was
```

accepted only if the case was reviewed, accepted as coded, and Over-ride Site/Type set to 1. Beginning with 2024, the SEER Site/Histology Validation List has been replaced by PathCHART, a database designating the status for each site/type/behavior combination as valid ("1")or biologically impossible ("3"). The status for any site/histology/behavior combination not in PathCHART is considered unlikely ("2"). The PathCHART database resulted from an extensive pathologic review of sites and histologies undertaken by NCI SEER, implemented over the 2024, 2025, and 2026 diagnosis years.

Sites reviewed in 2024 include Bone and Soft Tissue, Breast, Digestive, Female Genital, Male Genital, and Urinary (Kidney).
Sites reviewed in 2025 include Respiratory Tract, Thorax, Soft Tissue, Male Genital System, Urinary System, and CNS.
Sires reviewed in 2026 include Head and Neck.

The PathCHART table is imported into EditWriter from the PathCHART database. The Initial table in 2024 included all site/type/behavior combinations as they were evaluated in existing edits through 2023, plus any site/type combinations with a change in status based on the 2024 PathCHART review. The 2024 assignments were carried forward into 2025, with a change in status for any 2023 combinations reviewed in 2025. The 2025 assignments were carried forward into 2026, with a change in status for any 2023 combinations reviewed in 2026 The CPC project undertook an additional review of the 2024 and 2025 status assignments in 2026, with changes from the 2024 and 2025 assignments documented in the release notes for 2026 on the CPC website.

The edit referenced separate tables for 2024 and 2025 in the v24 and v25 edit NAACCR metafiles. A single table was developed for the v26 metafile, with separate columns for site/combination status for 2024 (Status 24A), 2025 (Status 25A), and 2026 (Status 26).

This edit will pass all site/type/behavior combinations designated as "valid" ("status 1") in the corresponding table. This edit will fail all site/type/behavior combinations designated as "impossible" ("status 3"). This edit will fail all site/type/behavior combinations designated as "unlikely" ("status 2" in the table or not included in the table). Over-Ride Site/Type can be set for the status 2 cases to allow them to pass the edit. Over-ride Site/Type should not be set for status "1" cases; Over-ride Site/Type cannot be set for status "3" cases.

Review of unlikely or rare combinations often results in changes to the primary site and/or morphology and/or behavior, rather than a decision that the combination is correct. The over-ride flag should not be set to 1 if the primary site, histologic type, and behavior is changed to a combination that will pass the edit. However, if upon review the site/type/ behavior combination is found to be accurate and in conformance with coding rules, it may be left as coded and the Over-ride Site/Type flag coded to 1.

Additional Information:

This edit forces review of atypical site/type/behavior combinations. Combinations not requiring review are presented, by primary site, in the PathCHART database. This edit does not imply that there are errors but rather that the combination of site,histology, and behavior is so unusual that it should be checked to ensure that it correctly reflects what is in the medical record. Resolution of discrepancies may require inspection of the abstracted text, review of the original medical record, or

consultation with the pathologist or diagnosing physician.

Review of these cases requires investigating whether a) the combination is biologically implausible or unlikely, or b) there are cancer registry coding conventions that would dictate different codes for the diagnosis. The following resources can be checked:

Current oncology and pathology textbooks
Current medical journal articles, e.g., via MEDLINE

Description

TNM Clin N and TNM Path N may be blank. If TNM Clin N is entered, it is edited by the criteria
below. If TNM Path N is entered, it is edited by the criteria below.

This edit is skipped if any of the following conditions is true:

1. Year of Date of Diagnosis is less than 2016, blank (unknown), or invalid
2. Type of Reporting Source = 7 (Death Certificate Only)
3. Histologic Type ICD-O-3 is blank
4. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline)
5. TNM Edition Number is not = 07 and not = 88
6. TNM Clin N and TNM Path N are both empty

The allowable values for

Clinical N: (blank), cX, c0, c0A, c0B, c1, c1A, c1B, c1C, c2, c2A, c2B, c2C, c3, c3A, c3B, c3C,
c4, 88
Path N: (blank), pX, c0, p0, p0I-, p0I+, p0M-, p0M+, p1MI, p0A, p0B, p1, p1A, p1B, p1C, p2,
p2A, p2B, p2C, p3, p3A, p3B, p3C, p4, 88

This edit checks the subset of values that are valid for each of the site/histology groups that
have a TNM N defined and checks for ?88? if the site/histology group does not have a TNM N
defined.

Pediatric cases not staged according to AJCC are skipped and are identified in this edit by TNM
Edition Number = 88, TNM Clin N = 88 or blank, TNM Path N = 88 or blank, and Over-ride Site/TNM-Stgrp = 1. The use of over-ride for cases over age 24 is checked in other

edits.

The number next to each site group indicates the chapter in the AJCC Cancer Staging Manual,
Edition 7. The sites for each chapter are listed along with the histologies for which N is
defined. The edit will pass when the codes listed are entered in TNM Clin N with "c" prefix or
in TNM Path N with "p" prefix; "cN0" will also pass when entered in TNM Path N, and where
specified ⍰88⍰ will pass the edit without the prefix. Blanks will also pass the edit but are
not specified. For those cases where there is a difference between the clinical and pathologic N codes, such as Merkel Cell, Melanoma of Skin, Breast, Melanoma Conjunctiva, the N
codes are listed separately for the clin and path assessment.

For example:
TNM N:
     Clin: X,0,1,2,2A,2B,3,3A,3B,3C
     Path: X,0,0I-,0I+,0M-,0M+,1,1A,1B,1C,1MI,2,2A,2B,3,3A,3B,3C

Translates to allowable codes of:
     Clin: (blank),cX,c0,c1,c2,c2A,c2B,c3,c3A,c3B,c3C
     Path: (blank),pX,c0,p0, p0I-,p0I+,p0M-
,p0M+,p1,p1A,p1B,p1C,p1MI,p2,p2A,p2B,p3,p3A,p3B,p3C

The sites/histologies for each group are listed in the EditWriter table AC7G2016.DBF, except as
noted below where special logic in this edit is used to assign or reassign sites/histologies to
a specified group number.

Description

TNM Clin N and TNM Path N may be blank. If TNM Clin N is entered, it is edited by the criteria
below. If TNM Path N is entered, it is edited by the criteria below.

This edit is skipped if any of the following conditions is true:

1. Year of Date of Diagnosis is less than 2016, blank (unknown), or invalid
2. Type of Reporting Source = 7 (Death Certificate Only)
3. Histologic Type ICD-O-3 is blank
4. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline)
5. TNM Edition Number is not = 07, U7, or 88
6. TNM Clin N and TNM Path N are both empty

The allowable values for

Clinical N: (blank), cX, c0, c0A, c0B, c1, c1A, c1B, c1C, c2, c2A, c2B, c2C, c3, c3A, c3B, c3C,
c4, 88
Path N: (blank), pX, c0, p0, p0I-, p0I+, p0M-, p0M+, p1MI, p0A, p0B, p1, p1A, p1B, p1C, p2,
p2A, p2B, p2C, p3, p3A, p3B, p3C, p4, 88

This edit checks the subset of values that are valid for each of the site/histology groups that
have a TNM N defined and checks for ‘88’ if the site/histology group does not have a TNM N
defined.

Pediatric cases not staged according to AJCC are skipped and are identified
in this edit by TNM Edition Number = 88, TNM Clin N = 88 or blank,
TNM Path N = 88 or blank, and Over-ride Site/TNM-Stgrp = 1. The use of
over-ride for cases over age 24 is checked in other edits.

The number next to each site group indicates the chapter in the AJCC Cancer Staging Manual,
Edition 7. The sites for each chapter are listed along with the histologies for which N is
defined. Site/histology group names are taken from UICC. The edit will pass when the codes
listed are entered in TNM Clin N with "c" prefix or in TNM Path N with "p" prefix; "cN0" will
also pass when entered in TNM Path N, and where specified ‘88’ will pass the edit without the
prefix. Blanks will also pass the edit but are not specified. For those cases where there is a
difference between the clinical and pathologic N codes, such as Merkel Cell, Melanoma of Skin,
Breast, Melanoma Conjunctiva, the N codes are listed separately for the clin and path
assessment.

For example:
TNM N:
     Clin: X,0,1,2,2A,2B,3,3A,3B,3C
     Path: X,0,0I-,0I+,0M-,0M+,1,1A,1B,1C,1MI,2,2A,2B,3,3A,3B,3C

Translates to allowable codes of:
     Clin: (blank),cX,c0,c1,c2,c2A,c2B,c3,c3A,c3B,c3C
     Path: (blank),pX,c0,p0, p0I-,p0I+,p0M-
,p0M+,p1,p1A,p1B,p1C,p1MI,p2,p2A,p2B,p3,p3A,p3B,p3C

The sites/histologies for each group are listed in the EditWriter table AC7G2016.DBF, except as
noted below where special logic in this edit is used to assign or reassign sites/histologies to
a specified group number.

Description

```
This edit checks that the TNM Clin Stage Group is valid for the site/histology.  This
edit
checks that the TNM Path Stage Group is valid for the site/histology.
```

This edit is skipped if any of the following conditions is true:

1. Year of Date of Diagnosis is less than 2016, blank (unknown), or invalid
2. Histologic Type ICD-O-3 is blank
3. TNM Edition Number not = 07, 88
4. TNM Clin Stage Group and TNM Path Stage Group are both blank

Pediatric cases not staged according to AJCC are skipped and are identified in this edit by TNM
Edition Number = 88, TNM Clin Stage Group = 88 or blank, TNM Path Stage Group = 88 or blank,
and Over-ride Site/TNM-Stgrp = 1 if the patient is under 25 years old. It is assumed by the
edit that patients age 25 or older will never be staged by a pediatric system, but most use of
pediatric staging will be for patients under 19 years or so. Starting with cases diagnosed 2016
and later blanks are not allowed unless Type of Reporting Source is 6 or 7.

The site-specific Stage Group values are listed below.The number next to each site group
indicates the chapter in the AJCC Cancer Staging Manual, Edition 7. The sites for each chapter
are listed along with the histologies requiring AJCC staging. The allowable values for the
clinical and pathologic stage groups are listed under Stage Group. When there is a difference
in allowable values for clinical and pathologic stage group, they will be specified separately.

The edit also passes if both Stage Group fields are coded 88 when Type of Reporting Source = 6
or 7. The edit fails if one Stage Group field is coded 88 but the other is not when Type of
Reporting Source = 6 or 7.

For sites/histologies not included in the list below, TNM Path Stage Group and TNM Clin Stage
Group should be coded to 88.

The sites/histologies for each group are listed in the EditWriter table AC7G2016.DBF, except as
noted below where special logic in this edit is used to assign or reassign sites/histologies to
a specified group number.

Administrative Notes

New edit - added to NAACCR v16 metafile.

This edit differs from the SEER edit with the same name in requiring both TNM Clin Stage Group
and TNM Path Stage Group to be coded 88 if one is coded 88, for Type of Reporting Source = 6
(autopsy only) or 7 (death certificate only). The edit does not require stage group fields to equal 88 if Type of Reporting Source = 7, as required by a separate SEER edit. Except for Autopsy
Only and Death Certificate Only case, the edit does not allow Stage Group codes for stageable
site/histology groups not specifically listed in the AJCC 7th Edition.

Modifications

NAACCR v16A

- Corrected logic for first INLIST of primary sites for site/histology group 57A, 000-419-440

changed to 000-440

lymphoma stage group values for these sites/histologies.

This edit checks that the TNM Clin Stage Group (when non-blank) is valid for the
site/histology.  This edit checks that the TNM Path Stage Group (when non-blank) is
valid for
the site/histology.

This edit is skipped if any of the following conditions is true:

1. Year of Date of Diagnosis is less than 2016, blank (unknown), or invalid
2. Type of Reporting Source = 7 (Death Certificate Only)
3. Histologic Type ICD-O-3 is blank
```

4. TNM Edition Number is not = 07, U7, 88
5. TNM Path Stage Group and TNM Clin Stage Group fields are both blank

Pediatric cases not staged according to AJCC are skipped and are identified in this edit by TNM
Edition Number = 88, TNM Clin Stage Group = 88 or blank, TNM Path Stage Group = 88 or blank,
and Over-ride Site/TNM-Stgrp = 1 if the patient is under 25 years old. It is assumed by the
edit that patients age 25 or older will never be staged by a pediatric system, but most use of
pediatric staging will be for patients under 19 years or so. Starting with cases diagnosed 2016
and later blanks are not allowed unless Type of Reporting Source is 6 or 7.

This edit checks that the TNM Clin Stage Group (when non-blank) is valid for the
site/histology. This edit checks that the TNM Path Stage Group (when non-blank) is valid for
the site/histology.

The site/histology specific Stage Group values are listed below.The number next to each site
group indicates the chapter in the AJCC Cancer Staging Manual, Edition 7. Site/histology group
names are taken from UICC.

The sites for each chapter are listed along with the histologies requiring AJCC staging. The
allowable values for the clinical and pathologic stage groups are listed under Stage Group.
When there is a difference in allowable values for clinical and pathologic stage group, they
will be specified separately.

For sites/histologies not included in the list below, TNM Path Stage Group and TNM Clin Stage
Group should be coded to 88 or left blank.

The sites/histologies for each group are listed in the EditWriter table AC7G2016.DBF, except as
noted below where special logic in this edit is used to assign or reassign sites/histologies to
a specified group number.

Administrative Notes

New edit - added to NAACCR v16 metafile.
SEER IF612

This edit differs from the NPCR and COC edits with the same name in allowing blank Stage Group
fields and in allowing NOS stage group codes for many site/histology groups that are not included
in AJCC. The edit allows all Lymphoma stage categories for Mycosis Fungoides and Ocular Adnexal
Lymphoma.

Modifications

NAACCR v16A

- Corrected logic for first INLIST of primary sites for site/histology group 57A, 000-419-440 changed to 000-440
- Corrected Description and Edit Logic to include 9727 as lymphoma rather than lymphoma/hematopoietic code, to delete 9728-9729
as
obsolete codes

- Added Group 57C, C420, C421, C424, 9811-9818, 9837, Stage groups 4,4A,4B,99,88. Groups 57A and 57C differ from definitions of
these groups in pre-2016 edits in only allowing these stage group values for these site/histologies. Pre-2016 edits allowed all
lymphoma stage group values for these sites/histologies.

NAACCR v16B
- Corrected edit logic for assigning site/histology group 011 to group 10B or 999 based on histology and CS Site-Specific Factor 25

NAACCR v16D
- 99 added to description as valid pathologic stage group for site/histology groups 8E and 8F, anaplastic carcinoma of thyroid, lookup
table also updated
- 99 added to description as valid stage group for site/histology group 055, Ocular Adnexal Lymphoma. Pathologic stage lookup table
updated with 1,1A,1B,2,2A,2B,3,3A,3B,4,4A,4B,99; clinical stage lookup table updated with 99
- Description, logic updated to allow clinical and pathologic stage group 88 for mesothelioma, 9050-9055, site/histo group 028

NAACCR v16E
- Information describing difference from COC and NPCR edits moved from Description to Administrative Notes

NAACCR v18
- Description, logic updated to allow 88 for peritoneal mesothelioma of female, site/histo group 37B
- Description updated to note that edit is skipped when both TNM Clin Stage Group and TNM Path Stage Group are blank, "both"
added

NAACCR v21B
- Description updated, code 88 added to list of allowable values for AJCC group 26, Pleural Mesothelioma
- Description, logic updated with pass for pediatric over-ride; logic includes check on over-ride if age > 24

NAACCR v26
- Description, logic updated, all references to "Sex" changed to "Sex Assigned at Birth". "Sex Assigned at Birth" codes limited to 1, 2, 9

Description

TNM Clin T and TNM Path T may be blank. If TNM Clin T is entered, it is edited by the criteria
below. If TNM Path T is entered, it is edited by the criteria below.

This edit is skipped if any of the following conditions is true:

1. Year of Date of Diagnosis is less than 2016, blank (unknown), or invalid
2. Type of Reporting Source = 7 (Death Certificate Only)
3. Histologic Type ICD-O-3 is blank
4. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline)
5. TNM Edition Number is not = 07 and not = 88
6. TNM Clin T and TNM Path T are both empty

The allowable values for

Clinical T: (blank), cX, c0, pA, pIS, pISU, PISD, c1MI, c1, c1A, c1A1, c1A2, c1B, c1B1, c1B2,

c1C, c1D, c2, c2A, c2A1, c2A2, c2B, c2C, c2D, c3, c3A, c3B, c3C, c3D, c4, c4A, c4B, c4C, c4D,
c4E, 88
Path T: (blank), pX, p0, pA, pIS, pISU, PISD, p1MI, p1, p1A, p1A1, p1A2, p1B, p1B1, p1B2, p1C,
p1D, p2, p2A, p2A1, p2A2, p2B, p2C, p2D, p3, p3A, p3B, p3C, p3D, p4, p4A, p4B, p4C, p4D, p4E,
88

This edit checks the subset of values that are valid for each of the site/histology groups that
have a TNM T defined and checks for "88" if the site/histology group does not have a TNM T
defined.

Pediatric cases not staged according to AJCC are skipped and are identified in this edit by TNM
Edition Number = 88, TNM Clin T = 88 or blank, TNM Path T = 88 or blank, and Over-ride Site/TNM-Stgrp = 1. The use of over-ride for cases over age 24 is checked in other edits.

The number next to each site group indicates the chapter in the AJCC Cancer Staging Manual,
Edition 7. The sites for each chapter are listed along with the histologies requiring AJCC
staging. The values for the clinical and pathologic T codes are listed under TNM T. All values
listed must be prefixed with a ?c? or ?p? except code "88" and blank. All clinical T codes
have a prefix of ?c? except for IS, A, ISU, ISD which must have a prefix of ?p?. The Path T
codes all have the prefix of ?p?. For cases where there is a difference in allowable values for
clinical and pathologic T codes (Testis, Prostate, Melanoma Conjunctiva, and Retinoblastoma),
the T codes are listed separately for clin and path.

For example for breast the edit lists
TNM T:
     X,0,IS,1,1A,1B,1C,1MI,2,3,4,4A,4B,4C,4D

Which translates to allowable codes of:

Clin T: (blank),cX,c0,pIS,c1,c1A,c1B,c1C,c1MI,c2,c3,c4,c4A,c4B,c4C,c4D
Path T: (blank),pX,p0,pIS,p1,p1A,p1B,p1C,p1MI,p2,p3,p4,p4A,p4B,p4C,p4D

The sites/histologies for each group are listed in the EditWriter table AC7G2016.DBF, except as
noted below where special logic in this edit is used to assign or reassign sites/histologies to
a specified group number.

Description

TNM Clin T and TNM Path T may be blank. If TNM Clin T is entered, it is edited by the criteria
below. If TNM Path T is entered, it is edited by the criteria below.

This edit is skipped if any of the following conditions is true:

1. Year of Date of Diagnosis is less than 2016, blank (unknown), or invalid
2. Type of Reporting Source = 7 (Death Certificate Only)
3. Histologic Type ICD-O-3 is blank
4. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline)
5. TNM Edition Number is not = 07, U7, or 88
6. TNM Clin T and TNM Path T are both empty

The allowable values for

Clinical T: (blank), cX, c0, pA, pIS, pISU, PISD, c1MI, c1, c1A, c1A1, c1A2, c1B, c1B1, c1B2,
c1C, c1D, c2, c2A, c2A1, c2A2, c2B, c2C, c2D, c3, c3A, c3B, c3C, c3D, c4, c4A, c4B, c4C, c4D,
c4E, 88
Path T: (blank), pX, p0, pA, pIS, pISU, PISD, p1MI, p1, p1A, p1A1, p1A2, p1B, p1B1, p1B2, p1C,
p1D, p2, p2A, p2A1, p2A2, p2B, p2C, p2D, p3, p3A, p3B, p3C, p3D, p4, p4A, p4B, p4C, p4D, p4E,
88

This edit checks the subset of values that are valid for each of the site/histology groups that
have a TNM T defined and checks for "88" if the site/histology group does not have a TNM T
defined.

Pediatric cases not staged according to AJCC are skipped and are identified in this edit by TNM
Edition Number = 88, TNM Clin T = 88 or blank, TNM Path T = 88 or blank, and Over-ride Site/TNM-Stgrp = 1. The use of over-ride for cases over age 24 is checked in other edits.

The number next to each site group indicates the chapter in the AJCC Cancer Staging Manual,
Edition 7. The sites for each chapter are listed along with the histologies requiring AJCC
staging. Site/histology group names are taken from UICC. The values for the clinical and
pathologic T codes are listed under TNM T. All values listed must be prefixed with a
?c? or ?p?
except code "88" and blank. All clinical T codes have a prefix of ?c? except for IS, A, ISU,
ISD which must have a prefix of ?p?. The Path T codes all have the prefix of ?p?. For cases
where there is a difference in allowable values for clinical and pathologic T codes (Testis,
Prostate, Melanoma Conjunctiva, and Retinoblastoma), the T codes are listed separately for clin
and path.

For example for breast the edit lists
TNM T:
     X,0,IS,1,1A,1B,1C,1MI,2,3,4,4A,4B,4C,4D

Which translates to allowable codes of:

Clin T: (blank),cX,c0,pIS,c1,c1A,c1B,c1C,c1MI,c2,c3,c4,c4A,c4B,c4C,c4D
Path T: (blank),pX,p0,pIS,p1,p1A,p1B,p1C,p1MI,p2,p3,p4,p4A,p4B,p4C,p4D

The sites/histologies for each group are listed in the EditWriter table AC7G2016.DBF, except as
noted below where special logic in this edit is used to assign or reassign sites/histologies to
a specified group number.

Description

This edit is skipped if any of the following conditions is true:

1. Year of Date of Diagnosis is less than 2016, blank (unknown), or invalid
2. Type of Reporting Source = 7 (Death Certificate Only)
3. Histologic Type ICD-O-3 is blank
4. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline)
2. TNM Edition Number is not = 07, U7, and not = 88
5. TNM Clin Stage Group is blank
6. TNM Clin T, TNM Clin N, or TNM Clin M is blank

The purpose of this edit is to validate the coded TNM categories, and site-specific staging parameters where used, with the coded Stage Group assignments. The edit is used for site/histology groups in AJCC 7th Edition chapters 3 through 28. Some TNM chapters require elements in addition to T, N, and M categories, such as grade or mitotic rate. for correct stage assignment. In this edit description, these elements are called staging parameters. The edit will not be skipped but will pass if a required staging parameter is blank.

The edit compares the combination of TNM Clin T, TNM Clin N, TNM Clin M categories, and staging parameter where required, with TNM Clin Stage Group.

The designation of "c" or "p" within the individual T, N, and M codes is ignored for this edit. Valid codes for individual fields (TNM Clin T, TNM Clin N, TNM Clin M, TNM Clin Stage Group), and for these individual fields by primary site, are checked in other edits.

An edit failure is returned if the Clin Stage Group is inconsistent with the expected group assignment for the coded T, N, M, and staging parameter if required, based on the AJCC stage tables. If a T, N, or M value is coded that is not included in the AJCC stage tables -- for example T4 is coded but only T4A and T4B are staged -- the stage assignment will not be checked and the edit will pass.

An edit failure is also returned if either the coded Clin Stage Group or the coded Path Stage Group returns "ERROR" from the lookup table, meaning that the combination of T, N, M, and staging parameter is invalid. Invalid combinations include T0N0M0/M0I+; T in situ with positive N and/or positive M category; and a Testis stage with an invalid S category. An invalid S category results when one or more of the 3 site-specific factors required to determine the category (SSF 13-AFP, SSF 15-hCG, SSF 16-LDH) is coded 988, meaning not applicable.

If the case is reviewed and accepted as coded (Over-ride TNM Tis = 1 or Over-ride

TNM Stage = 1), no further editing is done. See "Additional Information" in this description.

The site/histology groups are listed below. The number next to each site title indicates the respective chapter in the AJCC Cancer Staging Manual, Edition 7. The site/histology groups and group stage values are identified by site and histology in the edit Primary Site, Stage Group 2016 - Ed 7. Subdivisions of some groups were required for this edit; they are identified below with their criteria. Site-specific staging parameters are also identified. The description does not include the list of TNM categories, staging parameters, and stage groups; this information is contained in a table within EditWriter that contains around 14,000 records.

Additional Information:

The stage tables used by this edit check that the stage group assignment is correct for the coded values in the TNM Clin T, TNM Clin N, TNM Clin M, and staging parameter fields (as detailed above). These stage tables are based on the tables published in the AJCC 7th Edition Staging Manual including any errata. In rare cases staging may be assigned that varies from strict adherence to the published staging tables. For example, a physician may assign a stage group when an unknown T category would dictate an unknown stage group. AJCC is also interested in identifying cases where in situ behavior may be the only diagnosis on pathologic examination of tissue from the primary site, while findings on examination of regional nodes or distant sites indicate metastatic involvement.

Over-ride TNM Tis is available to allow assignment of stage groups 1-4 with an in situ T category. This over-ride is also used in other edits that check coding of N and M categories with an in situ T category. Over-ride TNM Stage is available to allow assignment of stage groups in other circumstances that vary from the published staging tables.

First check that T, N, M, staging parameter, and stage group values are coded correctly. Verify any apparent staging anomalies with the staging physician. Also contact the AJCC forum for staging questions or consult published training materials for guidance on handling specific case circumstances where the staging tables do not seem to apply. If, after careful review and consultation, the staging that generated an edit failure is determined to be correct, set the relevant over-ride to 1, Over-ride Tis for an in situ case or Over-ride TNM Stage for other cases, and rerun the edit.

Administrative Notes

New edit - added to NAACCR v16 metafile

Modifications

NAACCR v16A
- Updated stage mapping in table referenced by logic for Thyroid, Esophagus,

EsophagusGEJunction
- Updated description, edit logic to indicate that grade for site/histology group 028, Soft Tissue, is collected in the Grade field and not
in CS Site-Specific Factor 1
- Removed "else" after special logic for TXN0M0 for site/histology group 025, causing edit to pass inappropriately for other sites
- Updated to not edit for site/histology group 028, Soft Tissue Sarcoma, issues with grade assignment, Description notes this group
not edited
- Corrected Edit Logic to include 9727 as lymphoma rather than lymphoma/leukemia code, to delete 9728-9729 as obsolete codes
- Added Group 57C, C420, C421, C424, 9811-9818, 9837 to Edit Logic

NAACCR v16B
- Removed logic checking for Over-ride Site/TNM-StgGrp. This Over-ride allows pediatric cases to be coded with stage group 88.
The stage tables do not look for combinations of 88 88 88 88, so any record with such a combination would not be edited with the
edit. An edit failure based on incorrect setting of the Over-ride would duplicate the same edit failure in an edit that checks primary
site, stage group values for 2016.
- Table referenced by edit updated: TIS,NX,M0, stage group changed to ERROR from 0
- Corrected edit logic for assigning site/histology group 011 to group 10B or 999 based on histology and CS Site-Specific Factor 25

NAACCR v16D
- Added U7 to required TNM Edition Numbers
- Table referenced by edit updated, TXN2M0, Stage 3 for lung updated to TXN2M0, Stage 99
- Table referenced by edit updated, T4NXM0, Stage 3 for lung updated to T4NXM0, Stage 99
- Logic updated to pass T1,T2,T3, or T4 with N0M0 and unknown mitotic rate for site/histo groups 16A, 16B, GIST

NAACCR v16E
- Description, edit logic modified to validate stage for sites using grade as staging parameter when grade
is higher than allowed for assigned stage. This change was made to allow correct staging when a grade for
pathologic staging would be higher than the grade for clinical staging. There is only one

grade field
collected, the higher grade by registry coding guidelines, and the edit was enforcing the recorded grade in
clinical stage evaluation. The sites using grade as a staging component include Appendix-Carcinoma,
Esophagus/Esophagus GE Junction, Bone, Soft Tissue Sarcoma, and GIST (mitotic rate). Soft Tissue Sarcoma is
not edited because of other grade concerns.
- Validation of clinical stage for Esophagus/GE Junction was moved into a separate edit for EditWriter 4,
due to the program being unable to handle the added complexity of logic required for the modifications for
this site within a single edit.
- EditWriter 5 is able to handle the logic for Esophagus/GE Junction within the single edit, and the
separate edit Primary Site, TNM Cl Stge Valid Esoph-Ed 7 (COC) is not required for the SMF metafile.

NAACCR v18
- Description for site/histology group 16B, GIST, staging parameter, corrected to show that mitotic count for GIST Small Intestine is
collected in SSF 6, not SSF 11.
- Over-ride TNM Tis and Over-ride TNM Stage added to over-ride edit if codes reviewed and confirmed correct, allowing assignment
of stage value when physician staging or coding consultation does not match staging calculation in reference table. Over-ride TNM
Tis allows assignment of stage groups 1-4 with in situ T category. Over-ride TNM Stage allows assignment of stage groups in other
circumstances varying from published staging tables.
- Name changed, space removed before Ed

NAACCR v26
- Logic updated, all references to "Sex" changed to "Sex Assigned at Birth". "Sex Assigned at Birth" codes limited to 1, 2, 9

Description

```
This edit is skipped if any of the following conditions is true:

1. Year of Date of Diagnosis is less than 2016, blank (unknown), or invalid
2. Type of Reporting Source = 7 (Death Certificate Only)
3. Histologic Type ICD-O-3 is blank
4. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline
5. TNM Edition Number is not = 07,U7, 88
6. TNM Clin Stage Group is blank
7. TNM Clin T or TNM Clin M is blank

The purpose of this edit is to validate the coded TNM categories, and site-
specific staging parameters where used, with the coded Stage Group assignments.
The edit is used for site/histology groups in AJCC 7th Edition chapters 29
through 57. Some TNM chapters require elements in addition to T, N, and M
categories, such as grade or mitotic rate. for correct stage assignment. In this
```

edit description, these elements are called staging parameters. The edit will not be skipped but will pass if any of TNM Clin N or a required staging parameter is blank. (The exception for TNM Clin N allows for the possible coding of TNM Clin N as blank for site/histology group 39; if blank, TNM Clin N will be converted to "88" for the edit.)

The edit compares the combination of TNM Clin T, TNM Clin N, TNM Clin M categories, and staging parameter where required, with TNM Clin Stage Group.

The designation of "c" or "p" within the individual T, N, and M codes is ignored for this edit. Valid codes for individual fields (TNM Clin T, TNM Clin N, TNM Clin M, TNM Clin Stage Group), and for these individual fields by primary site, are checked in other edits.

An edit failure is returned if the Clin Stage Group is inconsistent with the expected group assignment for the coded T, N, M, and staging parameter if required, based on the AJCC stage tables. If a T, N, or M value is coded that is not included in the AJCC stage tables -- for example T4 is coded but only T4A and T4B are staged -- the stage assignment will not be checked and the edit will pass.

An edit failure is also returned if either the coded Clin Stage Group or the coded Path Stage Group returns "ERROR" from the lookup table, meaning that the combination of T, N, M, and staging parameter is invalid. Invalid combinations include T0N0M0/M0I+; T in situ with positive N and/or positive M category; and a Testis stage with an invalid S category. An invalid S category results when one or more of the 3 site-specific factors required to determine the category (SSF 13-AFP, SSF 15-hCG, SSF 16-LDH) is coded 988, meaning not applicable.

If the case is reviewed and accepted as coded (Over-ride TNM Tis = 1 or Over-ride TNM Stage = 1), no further editing is done. See "Additional Information" in this description.

The site/histology groups are listed below. The number next to each site title indicates the respective chapter in the AJCC Cancer Staging Manual, Edition 7. The site/histology groups and group stage values are identified by site and histology in the edit Primary Site, Stage Group 2016 - Ed 7. Subdivisions of some groups were required for this edit; they are identified below with their criteria. Site-specific staging parameters are also identified. The description does not include the list of TNM categories, staging parameters, and stage groups; this information is contained in a table within EditWriter that contains around 14,000 records.

Site/histology groups 49, Carcinoma of Conjunctiva, 50, Malignant Melanoma of Conjunctiva, 52, Retinoblastoma, 53, Carcinoma of Lacrimal Gland, 54, Sarcoma of Orbit, 55, Ocular Adnexal Lymphoma, are listed below. However, staging for these site/histology groups is not validated by this edit, as no stage grouping applies. The T, N, M codes for site/histology groups 49, 50, 52, 53, 54, and 55 are validated in the edits Primary Site, T 2016 - Ed 7, Primary Site, N 2016 - Ed 7, and Primary Site, M 2016 - Ed 7.

Site/histology group 57A, Lymphoid Neoplasms, is also listed below. However, staging for 57A does not include T, N, and M components, and stage is not validated in this edit. The T, N, M codes for site/histology group 57A are validated in the edits Primary Site, T 2016 - Ed 7, Primary Site, N 2016 - Ed 7,

and Primary Site, M 2016 - Ed 7. Stage group for 57A is validated in the edit Primary Site, Stage Group 2016 - Ed 7. Site/histology group 55, Ocular Adnexal Lymphoma, will pass this edit if coded as Lymphoma (T=88,N=88,M=88,Stage Group = stage from Ch 57), or as Ocular Adnexal Lymphoma (T=T from Ch 55, N=N from Ch 55, M=M from Ch 55, Stage Group = 88).

Modifications

NAACCR v16A
- Added stage mapping to table referenced by logic for T1A, T1B, T2A, T2B to site/group 57B, Primary Cutaneous Lymphoma
- Corrected site group in edit logic, 41E to 41A, defined for Prostate where CS Site-Specific Factor 1 = 988, 997, 998, 999

The
stage tables do not look for combinations of 88 88 88 88, so any record with such a combination would not be edited with the edit.
An
edit failure based on incorrect setting of the Over-ride would duplicate the same edit failure in an edit that checks primary site, stage

Tis allows assignment of stage groups 1-4 with in situ T category. Over-ride TNM Stage allows assignment of stage groups in other
circumstances varying from published staging tables.

Primary Site, AJCC N - Ed 7 ICD03, but it checks TNM Clin N and TNM Path N values for pre-2016 diagnoses coded either with or
without "c" and "p" components. This edit could be used for either converted cases or pre2016 cases diagnosed in 2016 software.

Description

This edit is skipped if any of the following conditions is true:

1. Year of Date of Diagnosis is less than 2016, blank (unknown), or invalid
2. TNM Edition Number is not = 07,U7, 88
3. Histologic Type ICD-O-3 is blank
4. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline)
5. TNM Path Stage Group is blank
6. TNM Path T, TNM Path N,or TNM Path M is blank
7. TNM Path Descriptor = 4 or 6

The purpose of this edit is to validate the coded TNM categories, and site-specific staging parameters where used, with the coded Stage Group assignments. The edit is used for site/histology groups in AJCC 7th Edition chapters 3 through 28. Some TNM chapters require elements in addition to T, N, and M categories, such as grade or mitotic rate. for correct stage assignment. In this edit description, these elements are called staging parameters. The edit will not be skipped but will pass if a required staging parameter is blank.

The edit compares the combination of TNM Path T, TNM Path N, TNM Path M categories, and staging parameter where required, with TNM Path Stage Group. The edit is skipped if TNM Path Descriptor is 4 or 6, indicating stage assignment after neoadjuvant treatment. (With neoadjuvaant treatment, combinations of T, N, M and staging parameters are allowed that would not be valid otherwise.)

The designation of "c" or "p" within the individual T, N, and M codes is ignored for this edit. Valid codes for individual fields (TNM Path T, TNM Path N, TNM Path M, TNM Path Stage Group), and for these individual fields by primary site, are checked in other edits.

An edit failure is returned if the Path Stage Group is inconsistent with the expected group assignment for the coded T, N, M, and staging parameter if required, based on the AJCC stage tables. If a T, N, or M value is coded that is not included in the AJCC stage tables -- for example T4 is coded but only T4A and T4B are staged -- the stage assignment will not be checked and the edit will pass.

An edit failure is also returned if either the coded Path Stage Group returns "ERROR" from the lookup table, meaning that the combination of T, N, M, and staging parameter is invalid. Invalid combinations include T0N0M0/M0I+; T in situ with positive N and/or positive M category; and a Testis stage with an invalid S category. An invalid S category results when one or more of the 3 site-specific factors required to determine the category (SSF 13-AFP, SSF 15-hCG, SSF 16-LDH) is coded 988, meaning not applicable.

If the case is reviewed and accepted as coded (Over-ride TNM Tis = 1 or Over-ride TNM Stage = 1), no further editing is done. See "Additional Information" in this

description.

The site/histology groups are listed below. The number next to each site title indicates the respective chapter in the AJCC Cancer Staging Manual, Edition 7.The site/histology groups and group stage values are identified by site and histology in the edit Primary Site, Stage Group 2016 - Ed 7. Subdivisions of some groups were required for this edit; they are identified below with their criteria. Site-specific staging parameters are also identified. The description does not include the list of TNM categories, staging parameters, and stage groups; this information is contained in a table within EditWriter that contains around 14,700 records.

Additional Information:

The stage tables used by this edit check that the stage group assignment is correct for the coded values in the TNM Clin T, TNM Clin N, TNM Clin M, and staging parameter fields (as detailed above). These stage tables are based on the tables published in the AJCC 7th Edition Staging Manual including any errata. In rare cases staging may be assigned that varies from strict adherence to the published staging tables. For example, a physician may assign a stage group when an unknown T category would dictate an unknown stage group. AJCC is also interested in identifying cases where in situ behavior may be the only diagnosis on pathologic examination of tissue from the primary site, while findings on examination of regional nodes or distant sites indicate metastatic involvement.

Over-ride TNM Tis is available to allow assignment of stage groups 1-4 with an in situ T category. This over-ride is also used in other edits that check coding of N and M categories with an in situ T category. Over-ride TNM Stage is available to allow assignment of stage groups in other circumstances that vary from the published staging tables.

First check that T, N, M, staging parameter, and stage group values are coded correctly. Verify any apparent staging anomalies with the staging

physician. Also contact the AJCC forum for staging questions or consult published training materials for guidance on handling specific case circumstances where the staging tables do not seem to apply. If, after careful review and consultation, the staging that generated an edit failure is determined to be correct, set the relevant over-ride to 1, Over-ride Tis for an in situ case or Over-ride TNM Stage for other cases, and rerun the edit.

Administrative Notes

New edit - added to NAACCR v16 metafile

Modifications

NAACCR v16A
- Updated stage mapping in table referenced by logic for Thyroid, Esophagus, EsophagusGEJunction
- Updated description, edit logic to indicate that grade for site/histology group 028, Soft Tissue, is collected in the Grade field and not
in
CS Site-Specific Factor 1
- Removed "else" after special logic for TXN0M0 for Lung, causing edit to pass inappropriately for other sites
- Updated to not edit for site/histology group 028, Soft Tissue Sarcoma, issues with grade assignment, Description notes this group
not
edited
- Corrected Edit Logic to include 9727 as lymphoma rather than lymphoma/leukemia code, to delete 9728-9729 as obsolete codes
- Added Group 57C, C420, C421, C424, 9811-9818, 9837 to Edit Logic

NAACCR v16B
- Removed logic checking for Over-ride Site/TNM-StgGrp. This Over-ride allows pediatric cases to be coded with stage group 88.
The
stage tables do not look for combinations of 88 88 88 88, so any record with such a combination would not be edited with the edit.
An

edit failure based on incorrect setting of the Over-ride would duplicate the same edit failure in an edit that checks primary site, stage
group values for 2016.
- Corrected edit logic for assigning site/histology group 011 to group 10B or 999 based on histology and CS Site-Specific Factor 25

NAACCR v16D
- Added U7 to required TNM Edition Numbers
- Table referenced by edit updated, TXN2M0, Stage 3 for lung updated to TXN2M0, Stage 99
- Table referenced by edit updated, T4NXM0, Stage 3 for lung updated to T4NXM0, Stage 99
- Logic updated to pass T1,T2,T3, or T4 with N0M0 and unknown mitotic rate for site/histo groups 16A, 16B, GIST

NAACCR v18
- Description for site/histology group 16B, GIST, staging parameter, corrected to show that mitotic count for GIST Small Intestine is
collected in SSF 6, not SSF 11.
- Over-ride TNM Tis and Over-ride TNM Stage added to over-ride edit if codes reviewed and confirmed correct, allowing assignment
of stage value when physician staging or coding consultation does not match staging calculation in reference table. Over-ride TNM
Tis allows assignment of stage groups 1-4 with in situ T category. Over-ride TNM Stage allows assignment of stage groups in other
circumstances varying from published staging tables.

Description

This edit is skipped if any of the following conditions is true:

1. Year of Date of Diagnosis is less than 2016, blank (unknown), or invalid
2. Type of Reporting Source = 7 (Death Certificate Only)
3. Histologic Type ICD-O-3 is blank
4. Behavior Code ICD-O-3 = 0 (benign) or 1 (borderline)
5. TNM Edition Number is not = 07, U7, 88
6. TNM Path Stage Group is blank
6. TNM Path T or TNM Path M is blank
6. TNM Path Descriptor = 4 or 6

The purpose of this edit is to validate the coded TNM categories, and site-specific staging parameters where used, with the coded Stage Group assignments. Some TNM chapters require elements in addition to T, N, and M categories, such as grade or mitotic rate. for correct stage assignment. In this edit description, these elements are called staging parameters. The edit will not be skipped but will pass if any of TNM Clin N or a required staging parameter is blank. (The exception for TNM Path N allows for the possible coding of TNM Path N as blank for site/histology group 39; if blank, TNM Path N will be converted to "88" for the edit.)

The edit compares the combination of TNM Path T, TNM Path N, TNM Path M categories, and staging parameter where required, with TNM Path Stage Group.

The edit is skipped if TNM Path Descriptor is 4 or 6, indicating stage assignment after neoadjuvant treatment. (With neoadjuvaant treatment, combinations of T, N, M and staging parameters are allowed that would not be valid otherwise.)

The designation of "c" or "p" within the individual T, N, and M codes is ignored for this edit. Valid codes for individual fields (TNM Path T, TNM Path N, TNM Path M, TNM Path Stage Group), and for these individual fields by primary site, are checked in other edits.

An edit failure is returned if the Path Stage Group is inconsistent with the expected group assignment for the coded T, N, M, and staging parameter if required, based on the AJCC stage tables. If a T, N, or M value is coded that is not included in the AJCC stage tables -- for example T4 is coded but only T4A and T4B are staged -- the stage assignment will not be checked and the edit will pass.

An edit failure is also returned if either the coded Path Stage Group returns "ERROR" from the lookup table, meaning that the combination of T, N, M, and staging parameter is invalid. Invalid combinations include T0N0M0/M0I+; T in situ with positive N and/or positive M category; and a Testis stage with an invalid S category. An invalid S category results when one or more of the 3 site-specific factors required to determine the category (SSF 13-AFP, SSF 15-hCG, SSF 16-LDH) is coded 988, meaning not applicable.

If the case is reviewed and accepted as coded (Over-ride TNM Tis = 1 or Over-ride TNM Stage = 1), no further editing is done. See "Additional Information" in this description.

The site/histology groups are listed below. The number next to each site title indicates the respective chapter in the AJCC Cancer Staging Manual, Edition 7. The site/histology groups and group stage values are identified by site and histology in the edit Primary Site, Stage Group 2016 - Ed 7. Subdivisions of some groups were required for this edit; they are identified below with their criteria. Site-specific staging parameters are also identified. The description does not include the list of TNM categories, staging parameters, and stage groups; this information is contained in a table within EditWriter that contains around 14,700 records.

Site/histology groups 49, Carcinoma of Conjunctiva, 50, Malignant Melanoma of Conjunctiva, 52, Retinoblastoma, 53, Carcinoma of Lacrimal Gland, 54, Sarcoma of Orbit, 55, Ocular Adnexal Lymphoma, are listed below. However, staging for these site/histology groups is not validated by this edit, as no stage grouping applies. The T, N, M codes for site/histology groups 49, 50, 52, 53, 54, and 55 are validated in the edits Primary Site, T 2016 - Ed 7, Primary Site, N 2016 - Ed 7, and Primary Site, M 2016 - Ed 7.

Site/histology group 57A, Lymphoid Neoplasms, is also listed below. However, staging for 57A does not include T, N, and M components, and stage is not validated in this edit. The T, N, M codes for site/histology group 57A are validated in the edits Primary Site, T 2016 - Ed 7, Primary Site, N 2016 - Ed 7, and Primary Site, M 2016 - Ed 7. Stage group for 57A is validated in the edit Primary Site, Stage Group 2016 - Ed 7. Site/histology group 55, Ocular Adnexal Lymphoma, will pass this edit if coded as Lymphoma (T=88,N=88,M=88,Stage Group = stage from Ch 57), or as Ocular Adnexal Lymphoma (T=T from Ch 55, N=N from Ch

55, M=M from Ch 55, Stage Group = 88).

Additional Information:

The stage tables used by this edit check that the stage group assignment is correct for the coded values in the TNM Clin T, TNM Clin N, TNM Clin M, and staging parameter fields (as detailed above). These stage tables are based on the tables published in the AJCC 7th Edition Staging Manual including any errata. In rare cases staging may be assigned that varies from strict adherence to the published staging tables. For example, a physician may assign a stage group when an unknown T category would dictate an unknown stage group. AJCC is also interested in identifying cases where in situ behavior may be the only diagnosis on pathologic examination of tissue from the primary site, while findings on examination of regional nodes or distant sites indicate metastatic involvement.

Over-ride TNM Tis is available to allow assignment of stage groups 1-4 with an in situ T category. This over-ride is also used in other edits that check coding of N and M categories with an in situ T category. Over-ride TNM

Stageis available to allow assignment of stage groups in other circumstances that vary from the published staging tables.

First check that T, N, M, staging parameter, and stage group values are coded correctly. Verify any apparent staging anomalies with the staging physician. Also contact the AJCC forum for staging questions or consult published training materials for guidance on handling specific case circumstances where the staging tables do not seem to apply. If, after careful review and consultation, the staging that generated an edit failure is determined to be correct, set the relevant over-ride to 1, Over-ride Tis for an in situ case or Over-ride TNM Stage for other cases, and rerun the edit.

Administrative Notes

New edit - added to NAACCR v16 metafile

Modifications

NAACCR v16A
- Added stage mapping to table referenced by logic for T1A, T1B, T2A, T2B to site/group 57B, Primary Cutaneous Lymphoma
- Corrected logic to only edit for site/histology groups 029 through 57B
- Corrected Edit Logic to include 9727 as lymphoma rather than lymphoma/leukemia code, to delete 9728-9729 as obsolete codes
- Added Group 57C, C420, C421, C424, 9811-9818, 9837 to Edit Logic

NAACCR v16B
- Removed logic checking for Over-ride Site/TNM-StgGrp. This Over-ride allows pediatric cases to be coded with stage group 88.
The
stage tables do not look for combinations of 88 88 88 88, so any record with such a combination would not be edited with the edit.
An
edit failure based on incorrect setting of the Over-ride would duplicate the same edit failure in an edit that checks primary site, stage
group values for 2016.
- Table referenced by logic updated:

031,IS,X,0,ERROR changed to IS,X,0,0
031, 1A,X,0,99 changed to 1A,X,0,1A
045,A,X,0 ,0A changed to A,X,0,99
045,IS,X,0,0IS changed to IS,X,0,99
- Corrected edit logic for assigning site/histology group 011 to group 10B or 999 based on histology and CS Site-Specific Factor 25

NAACCR v16D
- Description, logic modified to use SSF 8 or SSF 10 in validating stage group, whichever is higher. SSF 8 = 988, 998, 999 not
included
in comparison of SSF 8 and SSF 10
- Added U7 to required TNM Edition Numbers
- Staging table referenced by edit updated for site/histology groups 51A (Uveal Melanoma), and 57B (Primary Cutaneous
Lymphoma),
values for NOS stage groups not listed in AJCC 7th Edition changed to 99 (e.g., 57B, T4NXM0B2, Stage group 4A, changed to
T4NXM0B2, Stage group 99)
- Table referenced by edit updated, rows for 57B, T1A,T1B,T2A,T2B, M0 added

NAACCR v16E
- Updated Description for site/histology group 42, Testis, to read AFP range and hCG range, rather than AFP
value and hCG value

NAACCR v18
- Over-ride TNM Tis and Over-ride TNM Stage added to over-ride edit if codes reviewed and confirmed correct, allowing assignment
of stage value when physician staging or coding consultation does not match staging calculation in reference table. Over-ride TNM
Tis allows assignment of stage groups 1-4 with in situ T category. Over-ride TNM Stage allows assignment of stage groups in other
circumstances varying from published staging tables.
- Table referenced by edit, for 57B, all stage group 1A,1B,2A,2B,3A with BX, stage group changed to 99
- CS Site-Specific Factor 8 and CS Site-Specific Factor 10 for prostate set to 000 if = 988, 998, or 999, to correct comparison of

Gleason scores when one of the values is unknown.
- Name changed, space removed before Ed

NAACCR v26
- Logic updated, all references to "Sex" changed to "Sex Assigned at Birth". "Sex Assigned at Birth" codes limited to 1, 2, 9

codes either with or without the "c" or "p" component.
```

Pediatric cases not staged according to AJCC are skipped and are identified in this edit by TNM Edition Number = 88, TNM Clin T = 88 or blank, TNM Path T = 88 or blank, and Over-ride Site/TNM-Stgrp = 1. The use of over-ride for cases over age 24 is checked in other edits.

The site-specific TNM T values are listed below.The number next to each site group indicates the chapter in the AJCC Cancer Staging Manual, Edition 7. The sites for each chapter are listed along with the histologies requiring AJCC staging. The allowable values for the clinical and pathologic T codes are listed under TNM T. When there is a difference in allowable values for clinical and pathologic T codes, they will be specified separately.

Description

This edit check consistency between Histologic Type ICD-O-3 and RX Summ--Surg Prim Site 2023 for Prostate

1. This edit is skipped for any of the following:
    a. Diagnosis date before 2024, blank (unknown), or invalid
    b. Primary Site is blank or not C619
    c. Histologic Type ICD-O-3 is blank
    d. Behavior Code ICD-O-3 is blank
    e. RX Summ--Surg Prim Site 2023 is blank
    f. Type of Reporting Source = 7 (death certificate only)

2. If Histologic Type ICD-O-3 = 8500/3 (ductal component > 50% of tumor)
    then RX Summ--Surg Prim Site 2023 must = A500-A700, radical prostatectomy

SOLID TUMOR RULES:

• Ductal adenocarcinoma 8500/3: In prostate biopsies, the term “adenocarcinoma of prostate with ductal features” should be used in the pathology report and is coded 8140/3. In order to code ductal adenocarcinoma 8500/3, the ductal component must comprise >50% of the tumor with the percentage reported and from a radical prostatectomy specimen.

Description

This edit checks that the AJCC ID is valid for the site, histology, behavior, and schema discriminator(s) if required. AJCC ID is used to identify site, histology, and behavior combinations by AJCC 8th Edition chapter or AJCC Version 9 staging protocol. If there is an edit failure, the problem may lie in coding or a registry software issue, as AJCC ID is derived from the coded component variables and is not itself directly coded. Other edits check on the validity of codes of the component variables, though invalid codes will also cause this edit to fail.

This edit is skipped if any of the following conditions is true:

1. Year of Date of Diagnosis is less than 2018, blank (unknown), or invalid
2. Primary Site is blank
3. Histologic Type ICD-O-3 is blank
4. Behavior Code ICD-O-3 is blank

AJCC ID is assigned for Behavior Code ICD-O-3 = 3 for all primary site and histology combinations listed below. AJCC ID is assigned for other values of Behavior Code ICD-O-3 as shown. The assignment of an AJCC ID does not determine reportability requirements with respect to Behavior Code ICD-O-3; consult standard setter requirements for reportability questions. The edit is passed if an AJCC ID is assigned for a benign histology that is not considered reportable and is not staged by AJCC but may be coded as reportable by agreement.

Not every site/histology combination for Schema IDs is included as stageable by AJCC. Schema IDs, as shown in another edit, _SYS Schema ID, Primary Site, Histology, Behavior (NAACCR), include all combinations of site and histology, and are used in SEER EOD coding, the assignment of Summary Stage 2018, and the assignment of Site-Specific Data Items (SSDIs). AJCC ID must be coded "XX" for all site/histology/behavior combinations that are not included as stageable by AJCC. If Diagnosis date is 2018 or later, AJCC ID may not be blank.

Two AJCC IDs are listed for site/histologies from Chapter 45 of the AJCC 8th Edition. This chapter includes soft tissue sarcomas that are not stageable. These sites/histologies are assigned a disease value of 45 in some AJCC documentation. Versions 08 and 09 of the TNM.DLL may have assigned an AJCC ID of XX as these sites/histologies are not stageable. Either value of AJCC ID, 45 or XX, will pass the edit for AJCC API Version Original or AJCC API Version Current of 08.XX.XX or 09.00.00.

The following list shows the AJCC ID, AJCC chapter name, site, histologies, behavior,

and schema discriminator(s) where applicable. Where schema discriminators are blank (not applicable), they are converted to "X" for edit processing. Sex Assigned at Birth codes are mapped to schema discriminator 1 codes for certain histologies in the peritoneum, to distinguish between Primary Peritoneal Carcinoma (female) and sarcomas in the peritoneum (male). Age is mapped to Schema Discriminator 1 for Leukemia, specified histologies, to distinguish between 83.2, Acute Lymphoblastic Leukemia in Children, and 83.3, Acute Lymphocytic Leukemia in Adults.

Starting with 2025 diagnoses, Schema Discriminator 1 is not coded for C111;this primary site is assigned to staging for Nasopharynx only.

The list also shows histologies that are limited for staging by diagnosis date. The histology may have been added to, removed from, or changed behavior in ICD-O-3 for a certain diagnosis year, or became reportable for a particular primary site as of a certain diagnosis year.

AJCC released the first Version 9 staging protocol for Cervix Uteri for 2021+ diagnoses. Additional Version 9 staging protocols were released for 2023+ diagnoses for Appendix, Anus, Brain and Spinal Cord Other, and Brain and Spinal Cord Medulloblastoma. In 2024 Version 9 protocols were released for the NET schemas of digestive organs and Vulva. AJCC IDs for Version 9 protocols were the same as those based on the 8th Edition chapters through 2023, but in 2024 were converted to a new numeric value based on order of publication, starting with 9001 for Cervix Uteri.

NOTE: Where subdivisions of the AJCC ID are listed as A and B, the subdivisions are made for edit purposes and do not reflect the official AJCC ID designations.

SOLID TUMOR RULES for malignant brain, CNS, 2023:
A. It has been determined that these not recommended terms no longer have diagnostic and/or biological relevance. For example, gliomatosis cerebri is a term which is no longer recommended. Gliomatosis cerebri is now termed a growth pattern rather than a histologic type.
B. Terms which are not recommended are not included in the tables. When one of these terms are used, refer to the ICD-O and all updates for the correct histology code. For example, glioma NOS is an umbrella term for all gliomas and astrocytoma

Description

The primary purpose of the Treatment Data Check edits is to evaluate reported prognostic and treatment items for cancer cases with specific tumor characteristics. If the reported treatment does not appear to be consistent with widely recognized standards of care or cases fail to contain known prognostic characteristics, a warning is generated.

The purpose of this treatment data check is to ascertain that radiation is given and fully recorded for non- metastatic breast cancer treated with breast-conserving surgery.

1. Selection Criteria:
   a. Year of diagnosis 2023+.
   b. Schema ID = 00480
   c. Sex Assigned at Birth = 2 (female)
   d. Behavior Code ICD-O-3 = 3 (invasive)
   e. Age at Diagnosis 018-069
   f. Summary Stage 2018 = 1, 2, 3, 4 (invasive and no distant mets)
   g. RX Summ—Surg 2023 = A200-A240 or B200-B290 (breast conserving surgery)
   h. Type of Reporting Source skip if code is 6 (autopsy only) or 7 (DCO)

2. If the Reason for No Radiation is 2, 5, or 7 (contraindicated, patient died, or patient refused),
   no further editing is performed by this edit.

3. If the Reason for No Radiation is 6 (recommended, unknown why not given) or 8 (planned, unknown if given),
   a WARNING is given: "Follow this patient carefully for recommended radiation." No further editing is performed by this edit.

4. If the Reason for No Radiation is 1 (radiation therapy not administered) or 9 (unknown whether radiation recommended or administered),
   a WARNING is given: "Patients fitting this profile should usually receive radiation - please check." No further editing is performed by this edit.

5. For all other cases fitting the profile, a check for completely coded radiation follows.
   Warnings are given under the following conditions:

   a. If Rad--Regional Phase I Radiation RX Modality is 00 (no radiation) or 99 (unknown) or blank
      WARNING: "What is the Radiation Modality? Please check."

   b. If RX Summ--Surg/Rad Seq is 0 (no radiation and/or surgery, or unknown if surgery and/or radiation given) or 9 (sequence unknown, but both surgery and radiation given) or blank

Description

The primary purpose of the Treatment Data Check edits is to evaluate reported prognostic and treatment items for cancer cases with specific tumor characteristics. If the reported treatment does not appear to be consistent with widely recognized standards of care or cases fail to contain known prognostic characteristics, a warning is generated.

The purpose of this treatment data check is to ascertain that radiation is administered as first course treatment and is fully recorded for invasive, non-metastatic breast cancer with 4 or more positive regional nodes when treated with a mastectomy.

1. Selection Criteria:
   a. Year of diagnosis of 2023+.
   b. Schema ID = 00480
   c. Sex Assigned at Birth = 2 (female)
   d. Behavior Code ICD-O-3 = 3 (invasive)
   e. Age at Diagnosis 018-120
   f. Summary Stage 2018 = 1, 2, 3, 4 (invasive and no distant mets)
   g. RX Summ—Surg Prim Site 2023 = A300-A800, B300-B800 (total mastectomy or modified radical mastectomy)
   h. Regional Nodes Positive is 04-90
   i. Type of Reporting Source skip if code 6 (autopsy only) or 7 (DCO)

2. If the Reason for No Radiation is 2, 5,or 7 (contraindicated, patient died, or radiation refused),
   no further editing is performed by this edit.

3. If the Reason for No Radiation is 6 (recommended, unknown why not given) or 8 (planned, unknown if given),
   a WARNING is given: "Follow this patient carefully for recommended radiation." No further editing is performed by this edit.

4. If the Reason for No Radiation is 1 (radiation therapy was not administered) or 9 (unknown whether radiation recommended or administered),
   a WARNING is given: "Patients fitting this profile should usually receive radiation - please check." No further editing is performed by this edit.

5. For all other cases fitting the profile, a check for completely coded radiation follows.
Warnings are given under the following conditions:

a.If Phase I Radiation RX Modality is 00 (no radiation) or 99 (unknown) or blank
WARNING: "What is the Radiation Modality? Please check."

b. If RX Summ--Surg/Rad Seq is 0 (no radiation and/or surgery, or unknown if surgery or radiation given) or 9 (sequence unknown, but both surgery and radiation given) or blank.
WARNING: "What is the Radiation/Surgery Sequence? Please check."

The purpose of this treatment data check is to verify that chemotherapy and immunotherapy (BRM) is fully coded for patients with non-metastatic large or node-positive, ER- and PR- resected breast cancer. This edit also verifies that hormone therapy is given and fully coded for these patients if ER or PR is positive.

   If both Estrogen Receptor Summary and Progesterone Receptor Summary = 0

   a. If RX Summ--Chemo = 82, 85, or 87 (contraindicated, patient died, or treatment refused),
      the case passes the edit, and no further editing on RX Summ--Chemo is done.

QUESTION: Use 2024 or 2023 date?
From Tiffany: I know this is probaby a question for the standard setters, but I would favor going back to 2022 since this is when the new terms were added and because it is an issue of reportability. These histologies are not reportable in colon per the ICD-O-3 2022 update. I'm also thinking there wouuld probably not be an abundance of these cases in any one registry, even a central registry. It could be a regional thing though.

Description

The primary purpose of the Treatment Data Check edits is to evaluate reported prognostic and treatment items for cancer cases with specific tumor characteristics. If the reported treatment does not appear to be consistent with widely recognized standards of care or cases fail to contain known prognostic characteristics, a warning is generated.

The purpose of this treatment data check is to ascertain that prognostic information is complete for colon and rectal cases eligible for the Treatment Data Checks. If specified prognostic information is missing, a warning is generated.

1. Selection Criteria:
   a. Year of diagnosis of 2023+.
   b. Schema ID = 00200
   c. Behavior Code ICD-O-3 = 3 (invasive)
   d. Age at Diagnosis 018-120

2. If RX Summ--Surg Prim Site 2023 - A200-A290, B200-B291 (local tumor excision and/or polyectomy)
   then WARNING is given: "Please check that this is the only surgery of primary site". No further checks performed.

3. If RX Summ--Surg Prim Site 2023 = A300-A900, B300-B900 (surgery of the primary site performed)
   a. The following prognostic information is checked for blank, unknown, or no nodes examined:
      i. Tumor Size Summary: blank or 999
      ii. Regional Nodes Examined: blank or 00, 95-99
      iii. Regional Nodes Positive: blank or 95, 97-99

   b. If any of the above staging or prognostic items are blank, unknown, or not done,
      a WARNING is given to check for the information.

   c. If RX Summ--Scope Reg LN Sur is 0,1,3, or 9, or
      i. RX Summ--Scope Reg LN Sur is 2 and Regional Nodes Examined is 95-99, or
      ii. RX Summ—Scope Reg LN Sur is 4 and Regional Nodes Examined is 00, 04-99, or

Description

The primary purpose of the Treatment Data Check edits is to evaluate reported prognostic and treatment items for cancer cases with specific tumor characteristics. If the reported treatment does not appear to be consistent with widely recognized standards of care or cases fail to contain known prognostic characteristics, a warning is generated.

The purpose of this treatment data check is to ascertain that neoadjuvant radiation and chemotherapy are fully recorded for non-metastatic resected rectal cancer in individuals <80 YO.

1. Selection Criteria:
    a. Date of Diagnosis [390] =>1/1/2023

2 or 4,
              no further editing is performed.

Additional Messages

Description

```
This edit checks that Date Regional Lymph Node Dissection is blank if Sentinel Lymph
Nodes Examined and Regional Nodes Examined are the same numeric value. If Sentinel
Lymph Nodes Examined equals Regional Nodes Examined, only a Sentinel Node Biopsy
should have been performed; there would be no date to record for Regional Lymph Node
Dissection.

1. This edit is skipped if:
   a. Sentinel Lymph Nodes Examined is blank
   b. Regional Nodes Examined is blank
   c. Date of diagnosis is less than 2019, blank (unknown), or invalid.
   d. Schema ID is not 00470 (Melanoma of Skin) or 00480 (Breast)

2. If number of Sentinel Lymph Nodes Examined = number of Regional Nodes Examined,
    and number of Sentinel Nodes examined > 00 and number of Regional Nodes Examined >

6. Over-ride Name/Sex Assigned at Birth = 1.

The purpose of this edit is to identify likely errors in Sex Assigned at Birth based on first name. The edit compares the patient's first name (converted to uppercase) against a list of known name/Sex Assigned at Birth pairs and the birth decade for which they are most common. If a match on name and decade is found but the Sex Assigned at Birth code differs, an error is generated. If upon review the coded Sex Assigned at Birth and first name are found to be accurate and in conformance with coding rules, the fields may be left as coded and the Over-ride Name/Sex Assigned at Birth flag coded to 1.

              all subsequent race codes must = spaces.

2.     if Race 1 code is 99,

Administrative Notes

In the SEER*Edits software, the title of this edit is: IF93

This edit differs from the NAACCR edit of the same name in that if a patient has a race code of 01 (white), it must be the lastrecorded race for that patient; that is, the last race code not coded to 88 or spaces.

MODIFICATIONS:

NAACCR v11.2
7/2007

This edit was updated to match the logic in SEER*Edits:

1. The edit no longer checks Date of Diagnosis.
2. The following logic was added:
   - If any race codes (for Race 2, 3, 4, and 5) = spaces, all subsequent race codes must = spaces.
   - If more than the Race 1 code is entered, if any race = 99 (unknown), then all race codes (Race 1, 2, 3, 4, and 5) must = 99.
   - If more than the Race 1 code is entered, if any race codes (for

Race 2, 3, 4, and 5) = 88 (no further race documented), then all subsequent race codes must also = 88.
- A particular race code (other than spaces, 88, or 99) must not occur more than once.
- If a patient has a race code of 01 (white), it must be the last recorded race for that patient; that is, the last race code not coded to 88 or spaces.

NAACCR v11.3
6/2008
Updated Administrative Notes with the title of the corresponding edit in the SEER*Edits software.

NAACCR v25A
- Description, logic updated, to enforce coding for 07 and priority orders for other codes; code 98 if used must be entered after code 01
- Description, logic updated, if Race 1 = 99, all subsequent race codes must = 99; if Race 1 not = 99,
all subsequent race codes must not = 99.
- Logic updated so that more than one error message can be returned
- Logic updated to pass if Race 2 - Race 5 are blank

NAACCR v25B
- Description corrected, Race Codes 02-32, 96-97 take priority over codes 01 and 98 moved to new number 7, number 7 changed to 8
- Logic corrected, 98 added to 01 in priority coding for 02-32, 96-97
- Logic corrected, pass if Race 1 blank removed

Description

This edit would be used only by registries that chose not to convert the field Regional Nodes Positive. (See 2003 Implementation Guidelines, page 18, for conversion specifications.)

This edit is skipped if year of Date of Diagnosis is less than 1998 or greater than 2003 or blank.

This edit is skipped if Behavior Code ICD-O-3 is not 2 (in situ) or 3 (malignant).

This edit is also skipped if Regional Nodes Examined or Regional Nodes Positive is blank.

If Death Certificate only case (Type of Reporting Source = '7') the Regional Nodes Positive and Regional Nodes Examined must both be coded 99.

For the following sites and histologies (ICD-O-3), Regional Nodes Positive and Regional Nodes Examined must both be coded '99'.

1. Hematopoietic: 9731-9734, 9740-9758, 9760-9989

2. Lymphomas: 9590-9699, 9702-9729

3. Brain (except for histology 9140 (Kaposi sarcoma)):
   C700, C710-C719

4. Other CNS (except for histology 9140 (Kaposi sarcoma)):
   C701, C709, C720-C725, C728, C729

5. Other and ill-defined (except for histology 9140 (Kaposi sarcoma)):
   C760-C765, C767, C768, C809, C420-C429, C770-C779

```
For all cases, the following is checked:

1.  If Regional Nodes Examined = 00 , Regional Nodes Positive must = 98.

2.  If Regional Nodes Examined = 01 - 89, Regional Nodes Positive must
    = 97 or 99, or be less than or equal to Regional Nodes Examined.
    If Regional Nodes Examined = 90, then Regional Nodes Positive must
    = 00-96, 97, 99.

3.  If Regional Nodes Examined = 96, 97, or 98, Regional Nodes Positive
    must = 00 - 96, 97, or 99.

4.  If Regional Nodes Examined = 99, then Regional Nodes Positive
    must = 99.

5.  If Regional Nodes Examined = 95, Regional Nodes Positive must
    = 00, 97, or 99.
```

Administrative Notes

The edit differs from the corresponding CS version in that:

1. It is skipped if year of Date of Diagnosis is less than 1998 or greater than 2003.
2. In #2 (for all cases), it allows Regional Nodes Positive codes 91-96 if Regional Nodes Examined = 90. The CS version does not include 91-96.
3. In #3 (for all cases), it allows Regional Nodes Positive codes 91-96 if Regional Nodes Examined = 96, 97, 98. The CS version does not include 91-96.
4. In #5 (for all cases), it allows a Regional Nodes Positive code of 97 if Regional Nodes Examined = 95. The CS version allows the code 95 instead of 97 since it assumes the 97 was converted to 95.
5. This edit applies to data where Regional Nodes Positive was not converted.

Modifications:

NAACCR v11.2
8/2007

Edit logic was corrected: If Regional Nodes Examined = 96, 97, or 98, Regional Nodes Positive must = 00 - 96, 97, or 99. (The range for Regional Nodes Positive was changed from "00 - 90" to "00 - 96" to be consistent with the rules in effect for diagnosis years 1998-2003).

NAACCR v12.0
- Modified to use the date format of CCYYMMDD and the new interoperability date functions and rules.

QUESTION RESOLUTION - code 00 added to statement 7
Email from JH 9/26/2023:
Resection with operative report documenting that a lymph node dissection was done. There were no lymph nodes found in the specimen indicated to be the lymph node dissection. Per the CAnswer Forum (Scope of Regional Lymph Node Surgery), if the intention was to do a lymph node dissection and no lymph nodes were found on path, code the Scope Regional Lymph Node Surgery as 3 (Number of regional lymph nodes removed unknown or not stated). Regional Nodes Positive was coded to 98 - No nodes examined and Regional Nodes Examined was coded to 00-No nodes examined.

CAnswer Forum 7/14/2023:
“Imaging does not affect the coding of Scope of Regional LN [1292]. If your patient had a ALND attempted (no SLN bx, aspiration) , Scope of Regional LN [1292] should be assigned to code 3.”

QUESTION RESOLUTION - code 00 added to statement 7
Email from JH 9/26/2023:
Resection with operative report documenting that a lymph node dissection was done. There were no lymph nodes found in the specimen indicated to be the lymph node dissection. Per the CAnswer Forum (Scope of Regional Lymph Node Surgery), if the intention was to do a lymph node dissection and no lymph nodes were found on path, code the Scope Regional Lymph Node Surgery as 3 (Number of regional lymph nodes removed unknown or not stated). Regional Nodes Positive was coded to 98 – No nodes examined and Regional Nodes Examined was coded to 00-No nodes examined.
CAnswer Forum 7/14/2023:
“Imaging does not affect the coding of Scope of Regional LN [1292]. If your patient had a ALND attempted (no SLN bx, aspiration) , Scope of Regional LN [1292] should be assigned to code 3.”

RX Summ--Surg Prim Site 03-2022 and Diagnostic Confirmation conflict

Additional Messages

Description

If the case was previously reviewed and accepted as coded (Over-ride Surg/Dx Conf = 1) no further checking is performed.

For anyone with RX Summ--Surg Prim Site 03-2022 = 20-90
the diagnosis should be histologically confirmed (Diagnostic Confirmation 1-4).

Additional Information:

If the patient had a surgical procedure, most likely there was a microscopic examination of the cancer. This edit forces review of cases with a surgical procedure coded in the RX Summ--Surg Prim Site 03-2022 field but not a microscopic confirmation code in Diagnostic Confirmation. Verify the surgery and diagnostic confirmation codes, and correct any errors. Correction of errors may require inspection of the abstracted text, either online or as recorded on a paper abstract. Review of the original medical record may be necessary.

Sometimes there are valid reasons why no microscopic confirmation is achieved with surgery, for example, the tissue removed may be inadequate for evaluation. If upon review, the items are correct as coded, an over-ride flag may be set so that the case will not be considered in error when the edit is run again. Enter a 1 in the field Over-ride Surg/DxConf to indicate that the coding is correct.

Diagnostic Confirmation. Verify the surgery and diagnostic confirmation codes, and correct any errors. Correction of errors may require inspection of the abstracted text, either online or as recorded on a paper abstract. Review of the original medical record may be necessary.

Sometimes there are valid reasons why no microscopic confirmation is achieved with surgery, for example, the tissue removed may be inadequate for evaluation. If upon review, the items are correct as coded, an over-ride flag may be set so that the case will not be considered in error when the edit is run again. Additional Messages

Description

```
This edit is skipped for the following conditions:
      a. Date of diagnosis is not 1998-2002
      b. RX Summ--Surg Prim Site 03-2022 is blank.
      c. Registry is 0000001544 (New Jersey) and date of diagnosis is 1998 or 1999
      d. Registry is 0000001562 (New York)

If the case was previously reviewed and accepted as coded (Over-ride Surg/Dx Conf = 1)
no further checking is
```

performed.

For anyone with RX Summ--Surg Prim Site 03-2022 = 10-90
the diagnosis should be histologically confirmed (Diagnostic Confirmation 1,2,4).

Additional Information:

If the patient had a surgical procedure, most likely there was a microscopic examination of the cancer. This edit forces review of cases with a surgical procedure coded in the RX Summ--Surg Prim Site 03-2022 field but not a microscopic confirmation code in Diagnostic Confirmation. Verify the surgery and diagnostic confirmation codes, and correct any errors. Correction of errors may require inspection of the abstracted text, either online or as recorded on a paper abstract. Review of the original medical record may be necessary.

Sometimes there are valid reasons why no microscopic confirmation is achieved with surgery, for example, the tissue removed may be inadequate for evaluation. If upon review, the items are correct as coded, an over-ride flag may be set so that the case will not be considered in error when the edit is run again. Enter a 1 in the field Over-ride Surg/DxConf to indicate that the coding is correct.

ERROR_TEXT(Date of Diagnosis: %DC)

Description

This edit is skipped under the following conditions:

1. Year of Date of Diagnosis is less than 2000 and Registry ID is equal to 0000001544 (New Jersey)

If the case was previously reviewed and accepted as coded (Over-ride Surg/Dx Conf = 1) no further checking is performed.

For anyone with a surgical procedure coded in the surgery field (RX Summ--Surgery Type = 01-02, 05-07, 10-98) the diagnosis should be histologically confirmed (Diagnostic Confirmation < 5).

Additional Information:

If the patient had a surgical procedure, most likely there was a microscopic examination of the cancer. This edit forces review of cases with a surgical procedure coded in the RX Summary--Surgery Type field but not a microscopic confirmation code in Diagnostic Confirmation. Verify the surgery and diagnostic confirmation codes, and correct any errors. Correction of errors may require inspection of the abstracted text, either online or as recorded on a paper abstract. Review of the original medical record may be necessary.

Sometimes there are valid reasons why no microscopic confirmation is achieved with surgery, for example, the tissue removed may be inadequate for evaluation. If upon review, the items are correct as coded, an over-ride flag may be set so that the case will not be considered in error when the edit is run again. Enter a 1 in the field Over-ride Surg/DxConf to indicate that the coding is correct.

EXAMPLE

RX SUMMARY--SURGERY TYPE	02, BX OF PRIMARY SITE
DIAGNOSTIC CONFIRMATION	7, RADIOGRAPHY
OVER-RIDE SURG/DXCONF	BLANK, NOT REVIEWED

Review of the abstract showed that this was a case of lung cancer diagnosed on x-ray. A bronchial biopsy was done, but was negative for cancer. Clinicians did not believe that malignancy was ruled out, but rather believed that the tumor had not been sampled by the biopsy. Set the Over-ride flag to 1 to indicate that the case is correct as coded.

Description

The purpose of this edit is to verify that RX Summ--Treatment Status and Date 1st Crs RX COC are coded consistently. The edit also checks that these fields are consistent for autopsy only cases (Class of Case = 38).

```
This edit is skipped if Class of Case is blank.
This edit is skipped if Date of Diagnosis is blank (unknown), invalid, or <2010.

1. If Class of Case = 38 (autopsy only)
       Treatment Status must = 0 (no treatment given)
       Date 1st Crs RX COC must = blank

2. If Treatment Status = 9 (unknown if treatment given)
       Date 1st Crs RX COC must = blank

3. If Date 1st Crs RX COC is not blank,
       RX Summ--Treatment Status must = 0, 1, or 2.

Note: CoC requires Date 1st Crs RX COC to represent the date treatment began, the date
active surveillance was selected, or the date on which a decision was made not to
treat the cancer.  CoC does not require a date only for autopsy-only cases.  For cases
that are not autopsy-only, if no treatment was given and the date of that decision is
totally unknown, the applicable date field is blank.  When treatment status is unknown
and the date is unknown, the date field is blank.
```

Administrative Notes

New edit - NAACCR v21 metafile
This edit is based on N1461. N1461 is COC edit modified for NAACCR v21 with removal of date flags. NAACCR edit preserves
original description, logic, and Administrative Notes through v18D

Modifications:

NAACCR v12.1A
- Note added to description:
Note: If RX Summ-Treatment Status is 0 (no treatment given) and the Date of 1st Crs RX-COC is blank, the date flag should indicate
why the date of the decision not to treat is not recorded in the Date of 1st Crs RX-COC field.

NAACCR v12.2
- Removed logic that checked for RX Summ--Treatment Status of 0 (no treatment given)

when requiring Date of 1st Crs Flag to
equal 11 (autopsy) for Class of Case of 38 (autopsy only) and blank, 10, or 12 for non-autopsy only cases.

NAACCR v13
- Edit name changed from 'RX Summ--Treatm Stat, Date of 1st Crs RX--COC(COC)' to 'RX Summ--Treatm Stat, Date 1st Crs RX
COC (COC)'.
- Data item name changed from 'Date of 1st Crs RX--COC' to 'Date 1st Crs RX COC'.
- Data item name changed from 'Date of 1st Crs RX Flag' to 'Date 1st Crs RX COC Flag'.

NAACCR v15
- Updated Note in description to clarify the meaning of the date flag codes.

NAACCR v22B
- Logic updated, return PASS; added at end of edit

NAACCR v23
- Description, logic updated, date flag removed. Edit checks that treatment status is coded 9 and Date 1st Crs RX CoC is empty for Class of Case 38.
Edit checks that Date 1st Crs RX COC is empty if treatment status is coded 9. Edit checks that treatment status is coded 0, 1, or 2 if Date 1st Crs
RX COC is not empty.

Administrative Notes

New edit - added to NAACCR v12.2 metafile.
This edit differs from N5025 and N6065 in using Reason for No Radiation and Phase I Radiation Primary Treatment Volume
to identify if radiation given, and in not skipping before a specified date.
It differs from N6065 in not allowing blanks for no or unknown treatment values.
Modifications:

NAACCR v12.2B
- Removed problem logic that references Date of 1st Crs RX--COC and its corresponding date flag. (These fields are correctly edited
in
the edit "RX Summ--Treatm Stat, Date of 1st Crs RX--COC(COC)".)

Phase I Radiation Primary Treatment Volume"
- Description, logic updated, for conditions 2 and 3, if diagnosis date is pre-2018 and Phase I Radiation Primary Treatment Volume is
blank, then Rad--Regional RX Modality is checked. If diagnosis date is 2018+, Phase I Radiation Primary Treatment Volume is
checked.
- Description, logic updated to skip if blank or invalid diagnosis year.

NAACCR v18D
- Description, logic added, If RX Summ--Treatment Status = 1, at least one of the treatment fields must indicate treatment given,
including codes 1-7 for RX Summ--Scope Reg LN Sur

New edit - NAACCR v18C metafile.

This edit differs from N1601 and N5025 in allowing blanks for no and unknown treatment

values and
skipping for pre-2018. It differs from N1601 in using Reason for No Radiation and Phase I Radiation Treatment Modality
to identify if radiation given.

NAACCR v18D
- Description, logic added, If RX Summ--Treatment Status = 1, at least one of the treatment fields must indicate treatment given,
including codes 1-7 for RX Summ--Scope Reg LN Sur
- Description, logic modified, all checks on RX Summ--Scope Reg LN Sur removed except for
new description, logic noted above
- Name changed from RX Summ--Treatm Stat, Treatment, Schema ID, Blanks (NAACCR)

NAACCR v21B
- Description, logic updated, RX Summ--Scope Reg LN Sur codes 1--7 support RX Summ Treatment Status code 1 through 2020
only, 2-7+
- Description, logic updated, RX Summ--Scope Reg LN Sur codes 0-7, 9, blank allowed with treatment status = 0 or 9

NAACCR v23
- Description, logic updated, edit skipped for dx year > 2022
- Logic updated, INLIST replaced by AT
- Description, logic updated, RX Summ--Surg Prim Site changed to RX Summ--Surg Prim Site
03-2022
- Name changed from RX Summ--Treatm Stat, Treatment, Blanks (NAACCR)
- Description, logic updated, Reason for No Radiation = 1-2, 5-9 included as option for no treatment; Reason for No Radiation = 8-9 included as option for unknown treatment
- Description, logic updated, skip for pre-2019 changed to skip for pre-2018
