Introduction

Appendix A of the SSDI Manual is a listing of all the Schema ID's and relevant schema ID information. The information included in this appendix is part of the cancer registry software. This document can be used for a reference.

Schema ID covers every combination of primary site and histology and defines the assignment of the following as it applies to the primary site/histology combinations, and Schema Discriminators (when applicable)

- AJCC Version (when applicable)
- EOD Schema
- Summary Stage 2018
- Site-specific data items (SSDIs) (when applicable)
- Grade Table

For surveillance and software purposes, every combination of primary site and histology must be covered in Summary Stage 2018. The Summary Stage 2018 update was based on changes in AJCC 8th edition and how data has been collected historically.

Note: This appendix does reference the associated AJCC Version (when applicable) for each of the Schema IDs; however, it no longer includes information on the AJCC ID, which defines the specific primary site(s) and/or histology(ies) combinations which are eligible for AJCC staging. Any questions related to AJCC ID should be sent to ajcc@facs.org.

1	WHO Grade I: Circumscribed tumors of low proliferative potential associated with the possibility of cure following resection
2	WHO Grade II: Infiltrative tumors with low proliferative potential with increased risk of recurrence
3	WHO Grade III: Tumors with histologic evidence of malignancy, including nuclear atypia and mitotic activity, associated with an aggressive clinical course
4	WHO Grade IV: Tumors that are cytologically malignant, mitotically active, and associated with rapid clinical progression and potential for dissemination
L	Stated as “low grade” NOS
H	Stated as “high grade” NOS
A	Well differentiated
B	Moderately differentiated
C	Poorly differentiated
D	Undifferentiated, anaplastic
